Connected Cities

Building more attractive, sustainable and safer cities

OPPORTUNITY

To meet cities broader development goals and maximize socioeconomic outcomes from their digital transformation, a new approach is needed that enables end-to-end collaboration across city domains, allow to capture continuous innovation for and from all citizens and businesses, while optimizing and protecting cities investments.

Breakthrough Innovations

Nokia's City as a platform approach enables unified smart city asset management and efficient orchestrated operations while delivering tailor-made E2E use cases based on cross-application data sharing, analytics and automation. The outcomes for the city are maximized by delivering services that address cities problems in their entirety, and that can be experienced by citizens, including the most vulnerable ones.

City as a platform: a new approach to deliver better outcomes
