

Smart  
Design

# Your convenience is choking us

Anna Soisalo, Smart Design

“ A desk is a  
dangerous place  
from which to view  
the world.

wrote David Cornwell  
(aka John LeCarre)

Look beyond **the**  
**technology**

**Will our cities  
become a haven  
or hell?**

# Urbanisation is changing the construct of cities.

Predicted world population  
living in cities

2030 **61%**

2050 **75%**

As we move into cities, so does our **travelling**.

Number of taxis in NYC

Technology is  
enabling **new**  
**behaviours.**

eCommerce is worth over €600  
billion in Europe, and by 2021  
expected to increase by

**95%**

Image: Richard B. Levine

**Our deliveries** are clogging up cities, making them unhealthy.

**40%**

of air pollution and noise emissions in urban areas is caused by the transportation of goods.

**Will we lure people  
into giving up some  
convenience?**

The right solution  
isn't always the  
best. Equity equals  
inefficiency.

Ride-hailing services  
solve  
*a problem.*

vs

But, it's only the  
first step in our  
**mobility evolution.**

Next up  
Balancing convenience with  
community.

For solutions to work  
in cities they need to  
cater for a **spectrum  
that goes beyond** an  
urban – suburban  
dualism.

Let the **kids get their own car,**  
so we can sleep.

# No longer the 'family chauffeur'.

Three ways autonomous vehicles will impact families

**1** From drivers to orchestrators

**2** The circle of independence

**3** Parenting in connected mobility

**Will we be quick enough  
to sort out  
our deliveries?**

Image: udn.com

Cities are developing clearer visions and strategies for **passenger mobility**.

Similar strategic views for delivery are less prevalent.

Some cities are **working out fixes** – ranging from quiet logistics, to logistics and retail zones.

**Multi-modality**  
connects modes  
of transport to  
live journey  
maps and tools for  
collaboration.

Better collaboration across modes  
is a total **win-win-win**.

## Addressing the consequence of **convenience**.

**1** Acceptable  
trade-offs

**2** Coopetition  
is the future

**3** Balancing  
the trio

# Find the human story behind your innovation.

This makes **better design**. And **better business**.

# Thank you
