

Mr. Chris Ramseyer, Ph.D., P.E.

Chris is an expert in structural design, and teaches both steel and concrete design courses at the undergraduate and graduate level. His teaching skills are exemplary, and while working as a graduate student, he won the prestigious George Tauxe faculty-teaching award for 2004. Since becoming an assistant professor he has also won the College of Engineering, Alumni Teaching award in 2007 and the George Tauxe faculty-teaching award for a second time in 2011. Chris is also an excellent researcher, and is currently performing large-scale experimental efforts at Fears Lab, including testing oil-drilling structures at loads ranging to millions of pounds of force. In addition to his teaching and research duties, Chris also serves as the E-Club, LKOT, AEI, SAME and OU ASCE student chapter faculty advisor and as the experimental facility mentor to the rest of the civil engineering faculty. He's also the Fears Lab director, landscape designer and the resident OU South Campus birdwatcher, so this man wears a lot of hats.
