

Taylor Wilson

Taylor Wilson is an Applied Nuclear Physicist. He is the youngest person in history to produce nuclear fusion at the age of 14, and one of only a handful of people to do so privately. He has developed numerous revolutionary technologies based on nuclear science including radiation detectors and scanning systems for counterterrorism applications and methods for producing medical radioisotopes extremely inexpensively. He was the top overall individual winner at the 2011 Intel International Science and Engineering Fair, and is now a Thiel Fellow with plans to start up a company in the near future.
