

**The Extrusioneers** 

# Technical solutions for today and tomorrow's PE film production

Steve DeSpain, Reifenhauser Incorporated

Roll to Roll Web Coating and Finishing AIMCAL R2R Conference USA 2017

### Global Megatrends and their impact on flexible films

#### Major impacts on flexible multilayer packaging

- Growing population will continue growth of flexible films demand
   → approx. 7% CAGR 2013-2017 according to AMI
- Selection of raw materials, energy efficiency and recycling will come even more into focus
  - $\rightarrow$  increased production / lifecycle efficiency
- Sophistication of flexible packaging will lead to smarter packaging
   → smaller packaging sizes, re-closeable, re-useable

& ilver Society

#### Roll to Roll Web Coating and Finishing AIMCAL R2R Conference USA 2017

### Global Megatrends and their impact on flexible films

-The Next Billion Consumers: \$10 Trillion
-Everything the Same but Nicer: \$5 Trillion
-Keeping the Wealthy, Healthy: \$4 Trillion
-The Growing Output of Primary Inputs

#### The Global Middle Class and Global Flexible Packaging

### **By The Numbers**

- 1.8 Billion People in the Middle Class
- 3.2 Billion Expected by 2020
- 4.9 Billion Expected by 2030
- 66% of Global Middle Class Represented by Asia
- I Billion Chinese as Part of Middle Class by 2030

#### World Flexible Packaging Market 2016 Total \$86 Billion

COUNTRY / REGION	% Flexible Packaging Market	Population in Millions	% World Population	Per Capita Consumption in US \$
Europe	21	739	10	24.43
N America	27	363	5	63.93
Total-Developed Countries	48	1102	15	37.45
C & S America	6	648	9	7.97
Asia Pacific	41	4518	60	7.80
Africa / Middle East	5	1247	16	3.45
Total-Developing Countries	52	6413	85	6.97

Roll to Roll Web Coating and Finishing **AIMCAL R2R Conference USA 2017** 

#### **U.S. Packaging Industry**

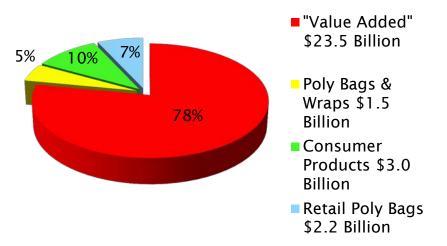

#### Total U.S. Packaging \$164 Billion

#### Metal Cans

- Misc Rigid Plastics & Bottles
   Glass
- Other
- Corrugated
- Paperboard
- Flexible

Source: U.S. Census Bureau 2015 ASM Census and FPA estimates for 2016 total revenue

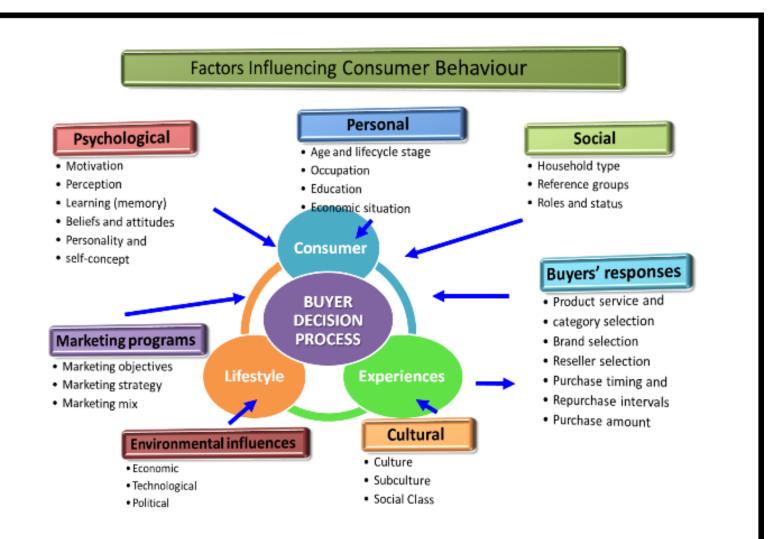

#### Roll to Roll Web Coating and Finishing AIMCAL R2R Conference USA 2017

2

Impact 1: **Growing population will** continue the growth of flexible film demand and requires flexible and advanced extrusion systems.

#### As Consumer Behavior Goes, So Goes Branding and Packaging

#### **Functionality Creates Opportunity**

- Portability
- Portion Control
- Convenience
- Freshness
- Sustainability

# Roll to Roll Web Coating and Finishing **AIMCAL R2R Conference USA 2017**

### **Top 10 Global Consumer Trends**

# Consumers are more demanding of products, service and brands

- Ageing
- Consumers in training
- Extraordinary
- Faster Shopping
- Get real: The allure of authenticity

- Identity in flux
- Personalize it
- Post purchase
- Privacy & security
- Wellness as status symbol

Roll to Roll Web Coating and Finishing **AIMCAL R2R Conference USA 2017** 

### 2

### Ageing

- More than a quarter of the people on Earth are over 50
- Growing contingent of active and productive people who are working longer and taking the economy in a new direction: "longevity economy"
- Disruptive aging: "Midorexia" Middle aged consumers who act younger than their years "50 is the new 30"

### Roll to Roll Web Coating and Finishing **AIMCAL R2R Conference USA 2017**

#### Personalize it

- Personalization is not limited to luxury anymore
- Products that fit you....and learn about you (websites proposing products and digital engagement
- (Personalized) Subscription services (fashion, wine, coffee,....)
- This trend changes consumer expectations; brands need to fulfil and even predict needs

### Roll to Roll Web Coating and Finishing **AIMCAL R2R Conference USA 2017**

#### **Purchase decision moves online**

#### The traditional way of shopping has changed

Roll to Roll Web Coating and Finishing **AIMCAL R2R Conference USA 2017** 

#### **U.S. Flexible Packaging Overview**

Metric	2000	2009	2016
Number Companies	665	410	426
Manufacturing Facilities	1010	970	954
Employees	89 Thousand	<80 Thousand	79 Thousand
Sales per Employee	\$221K	\$290K	\$383K

Source: U.S. Census Bureau and Flexible Packaging Association 2001 and 2010 State of the Industry Reports and 2016 State of the Industry Survey preliminary data

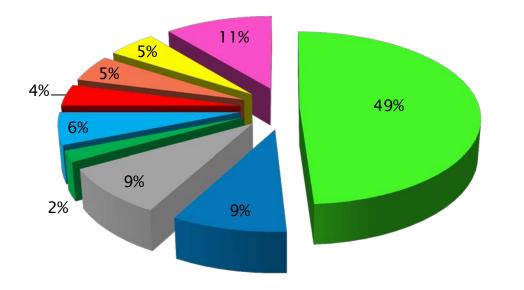

### Roll to Roll Web Coating and Finishing **AIMCAL R2R Conference USA 2017**

#### **U.S. Packaging End-Use Markets**

#### Flexible Packaging Sales by End-Use Market: \$30.2 Billion

- Food \$14.9 B
- Consumer Products \$2.7 B
- Beverage \$2.7 B
- Pet Food \$0.6 B
- Personal Care \$1.8 B
- Tobacco \$1.2 B
- Other Non Food \$1.5 B
- Industrial Applications \$1.5 B
- Medical & Pharma \$3.3 B

# Roll to Roll Web Coating and Finishing **AIMCAL R2R Conference USA 2017**

# "Imagine if you could run your press at full speed with perfect print quality."

Roll to Roll Web Coating and Finishing AIMCAL R2R Conference USA 2017

### **Converter's Film Requirements** Major Criteria

- $\rightarrow$  quality
- Printing speed
  - $\rightarrow$  output
- Type of films
  - $\rightarrow$  flexibility

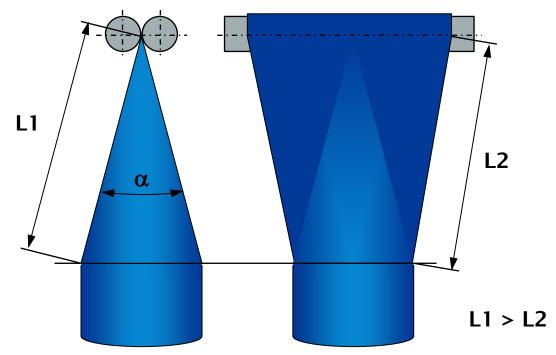

**EFFICIENCY** 

#### Roll to Roll Web Coating and Finishing AIMCAL R2R Conference USA 2017

#### Examples of film quality enhancement Definition of camber

Camber of film is caused mainly by different lengths in the collapsing frame

Length differences depend on collapsing angle  $\alpha$ , e. g. for a collapsing angle 11°: 0.34 % length difference Measurement of camber at film length 10 m

Roll to Roll Web Coating and Finishing **AIMCAL R2R Conference USA 2017** 

#### Examples of film quality enhancement Definition of flatness

Bagginess in the film are mainly caused by temperature variations

Bagginess in the film

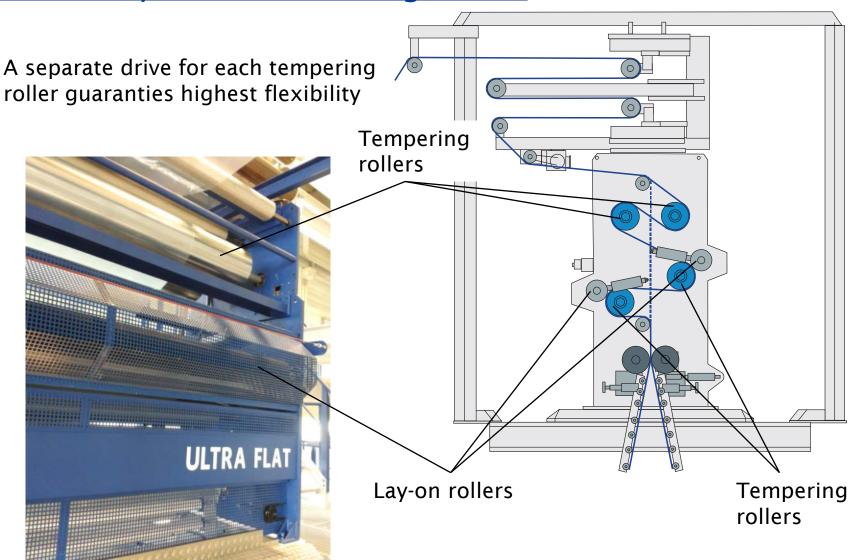

### Roll to Roll Web Coating and Finishing **AIMCAL R2R Conference USA 2017**

### Take-off System w/Flattening Device

IMCAI

#### **Examples of film quality enhancement** Performance results

improvements on

- Film flatness
- Film camber
- Printing quality
- Printing speed
- Lamination quality

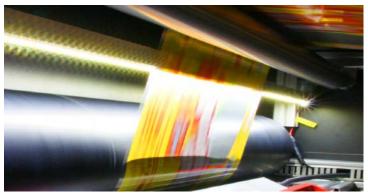

#### Examples of film quality enhancement Improvement of film flatness

42 %

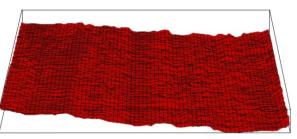

Real measurement of the film flatness with the optical web tension profile scanner at Fraunhofer IVV, Branch Lab for Processing Machinery and Packaging Technology in Dresden/Germany,

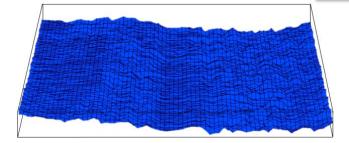

Use of the EVOLUTION UltraFlat take-off system improves the film flatness significantly

> Flatness of this label film improves by 42 % by use of the EVOLUTION Ultra Flat

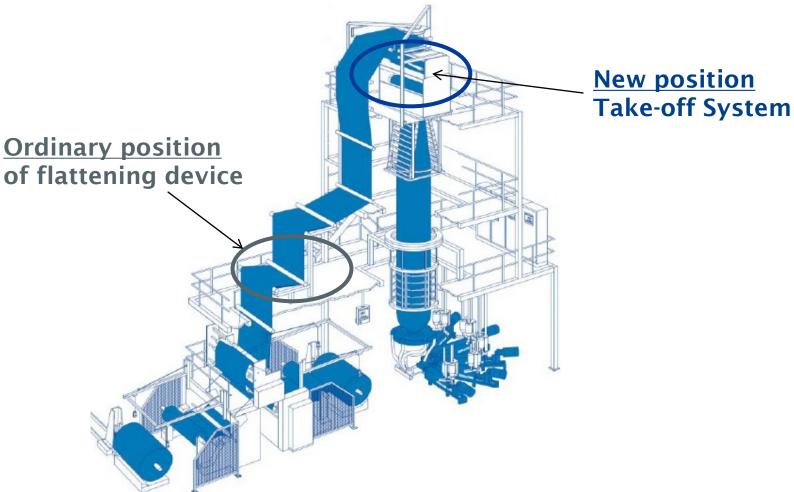

### Examples of film quality enhancement Improvement of lamination quality

Blown film laminated to BOPP with **solvent-based** adhesive and with **solvent-free** adhesive

production waste

#### <u>Flatness Enhancement</u> **Comparison of different systems**

Roll to Roll Web Coating and Finishing **AIMCAL R2R Conference USA 2017** 

#### **Stretching Systems (MDO)**

#### **Customer benefits**

- Design film properties
  - Down gauging
  - Improved mechanics
  - Optimized optics
  - Increased barrier properties

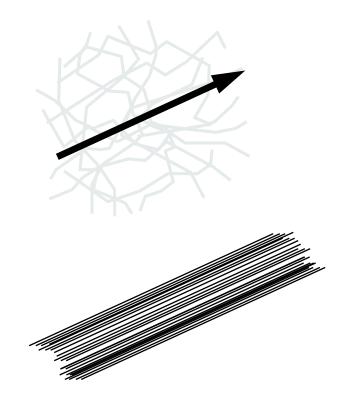

# Roll to Roll Web Coating and Finishing **AIMCAL R2R Conference USA 2017**

### Why is more orientation required?

- to modify physical properties to obtain desired characteristics and/or gain processing efficiencies
- Down gauging
- Stiffness
- Gloss
- Transparency
- Tear strength
- Flatness
- Barrier properties

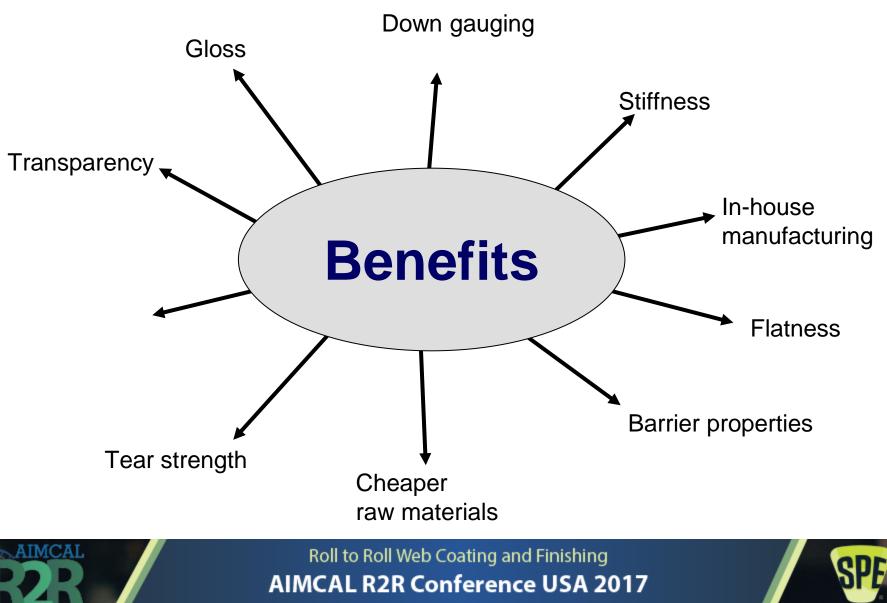

### Roll to Roll Web Coating and Finishing **AIMCAL R2R Conference USA 2017**

#### **MDO Benefits**

Conferenc

FlexPackCon

# 2

### Why inline configuration?

- Suitable for long production runs
- Reduction of labor costs
- Reduction of waste
- Elimination of an additional production process

Roll to Roll Web Coating and Finishing **AIMCAL R2R Conference USA 2017** 

### **Applications for MDO Films**

- Stand up pouches
- Shrink wrap
- Backsheet
- Twist wrap
- Frozen food packaging
- Barrier packaging
- Lidding films
- Silage stretch

# Roll to Roll Web Coating and Finishing AIMCAL R2R Conference USA 2017

# Impact 2: Raw materials, energy efficiency and recycling will come even more into focus.

Roll to Roll Web Coating and Finishing **AIMCAL R2R Conference USA 2017** 

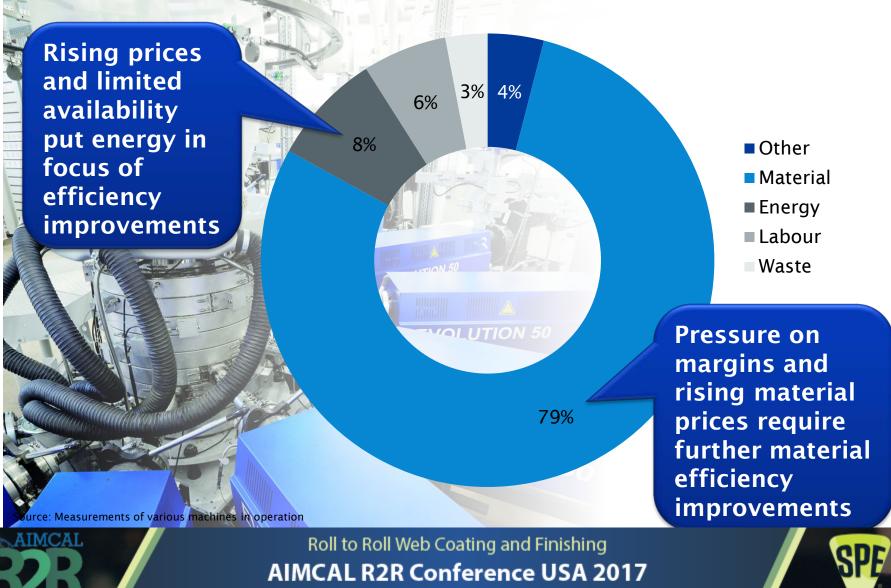

# 2

#### **Blue Extrusion** Efficient Machinery for Sustainable Film Production

BLUECOMPETENCE Alliance Member Partner of the Engineering Industry Sustainability Initiative

### **Average Flexible Film Production Cost Breakdown**

Naples, Florida - October 15th - 18th

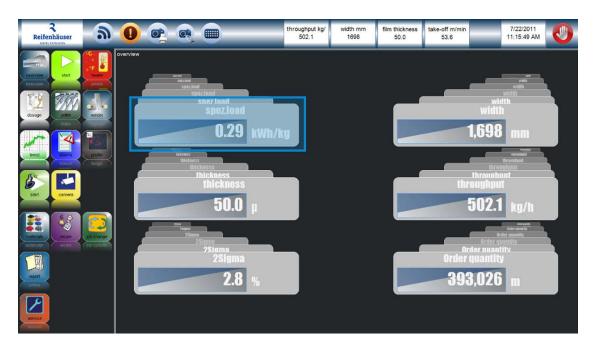

Conference

### Energy Consumption of a Multi-layer Blown Film Line

Source: Measurements of various machines in operation

# 2

#### **Blue Extrusion** Efficient Machinery for Sustainable Film Production

#### Sustainable Blown Film Production

- Reduced energy consumption
- Reduction of waste
- Fast start-up and quick job changes
- Accurate and low film tolerances
- Downgauging
- Highest possible converting speeds
- Production of "BIO" polymers
- Educate end users 3R's (Reduce, Recycle and Re-use)

Reduction of carbon footprint

# Reduction of production costs

#### Roll to Roll Web Coating and Finishing AIMCAL R2R Conference USA 2017

# "Imagine if you could reduce trim waste."

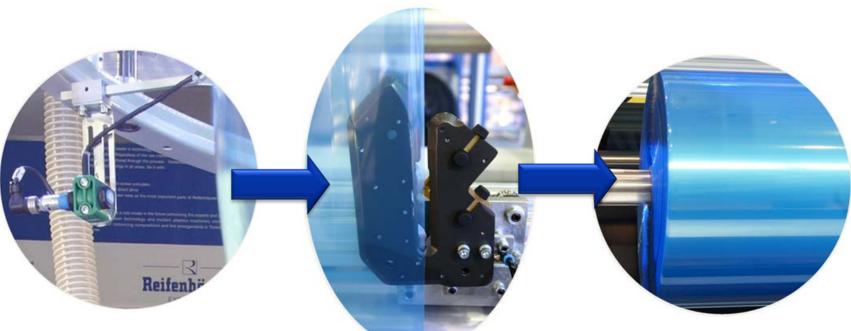

Roll to Roll Web Coating and Finishing **AIMCAL R2R Conference USA 2017** 

## Width Control - Waste Free Production

### Width control loop

Optimized slitting knives

Perfect reel geometry without edge trim

#### Roll to Roll Web Coating and Finishing AIMCAL R2R Conference USA 2017

## Width Control - Waste Free Production

#### Example of film production

Workdays / year	300
Hours / day	24
OEE	92%
Line output	1100lb/h
Required film width	67"

#### Production <u>with</u> edge trims

Edge trim	2 × 1.0"
Gross film width	69"

#### Production without edge trims

Edge trim	0"
Gross film width	67.5"

 $2 \times 0.25$ " extra film width for tube tolerances

#### Calculation of edge trim waste

<u>300 d/y × 24 h/d × 92% × 1100 lb/h × (69"- 67.5")/69" = 158,400 lb/year</u>

Calculation of resin cost savings 158,400 lb  $\times$  \$1.07/lb  $\approx$  \$169,488

Saving approx. 158,400 lb edge trim waste / year

#### Saving approx. \$170,000/ year + saving handling costs for edge trims

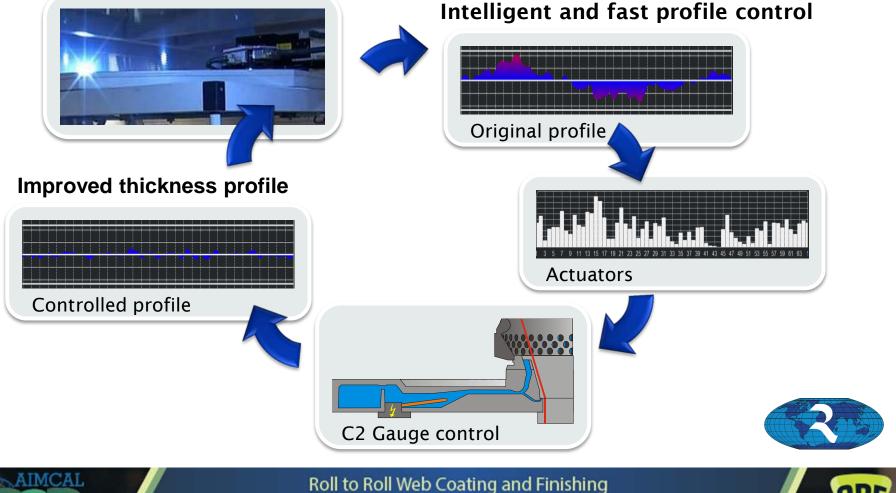

Roll to Roll Web Coating and Finishing AIMCAL R2R Conference USA 2017

## **High Efficiency Profile Control**

## High-precision capacitive or radiometric thickness measurement

Conference

## AIMCAL R2R Conference USA 2017

## 2

## **High Efficiency Profile Control**

## **High Efficiency Profile Control**

#### Example of film production

Workdays / year	300
Hours / day	24
OEE	92 %
Line output	1100 lb/h
Required film width	67"

#### Production <u>without</u> profile control

Profile tolerance	±7%2σ
Production with profile control	
Profile tolerance	± 3 % 2σ
Improvement	±4%2σ

Average thickness without profile control

<u>2.0 mil/(1-0.07) = 2.15 mil</u>

<u>Average thickness with profile control</u> 2.0 mil/(1-0.03) = 2.06 mil

Calculation of resin saving

<u>300 d/y × 24 h/d × 92 % × 1100 lb/h × (1-2.06 mil / 2.15 mil) = 305,015 lb/year</u>

Calculation of saving resin costs 305,015 lb/y  $\times$  \$1.07/lb  $\approx$  \$326,366 Saving approx. 305,015 lb / year material

Saving approx. \$327,000/ year

## **Start-up Assistant**

- ✓ Fast start-up by use of pre-defined sequences
- Logical, gradual and easy breakdown of start-up steps
- $\checkmark$  Reduction of start-up waste
- Film producer can apply own pre-set parameters based on practical product experience

### Roll to Roll Web Coating and Finishing AIMCAL R2R Conference USA 2017

## **Start-up Assistant**

#### Example of film production

Workdays / year	300
New starts / week	2
Average line output	1100 kg/h

#### Without Start-up Assistant

Start-up time	30 min
<u>With</u> Start-up Assistant	
Start-up time	15 min

Calculation of resin savings

<u> $300 d/y \times (2 / 7) / d \times (30-15) min / 60 min/h \times 1100 lb/h = 23,570 lb/year</u>$ </u>

Calculation of resin cost savings  $23,570 \text{ lb} \times \$1.07/\text{lb} \approx \$25,220$ 

Saving approx. 23,570 lb resin / year

Saving approx. \$25,000 / year + higher productivity of 21.4 h/y

Roll to Roll Web Coating and Finishing AIMCAL R2R Conference USA 2017

## Job Change Assistant

## 2

- ✓ Secure product change without operator errors
- ✓ Faster than operators can manually do
- ✓ Parallel actions
- Less scrap, less costs, more profitable production
- ✓ Higher line availability for production

#### Roll to Roll Web Coating and Finishing AIMCAL R2R Conference USA 2017

## Job Change Assistant

#### Example of film production

Workdays / year	300
Changeovers / day	2
Average line output	1100lb/h

#### <u>Without</u> Job Change Assistant

Changeover time	14 min	
<u>With</u> Job Change Assistant		
Changeover time	4 min	

 $\frac{\text{Calculation of resin savings}}{300 \text{ d/y} \times 2 \text{ /d} \times (14-4) \text{ min / 60 min/h} \times 1100 \text{ lb/h} = 110,000 \text{ lb/year}}$ 

Calculation of resin cost savings  $110,000 \times 1.07/lb \approx 117,700$  Saving approx. 110,000 lb resin / year

Saving approx. \$118,000 / year + higher productivity of 100 h/y

Roll to Roll Web Coating and Finishing AIMCAL R2R Conference USA 2017

# Impact 3: Sophistication of flexible packaging will lead to smarter packaging and advanced machine technology

Roll to Roll Web Coating and Finishing **AIMCAL R2R Conference USA 2017** 

## **Market Trends - Key Developments**

- Current Key Developments
  - > High barrier transparent films
  - Biodegradable films
  - Light weighting
  - Easy open features in films
  - Peel & recloseable lidding films

- > Future trends in food and beverage packaging will include
  - Improved safety
  - Additional functionality
  - Added convenience

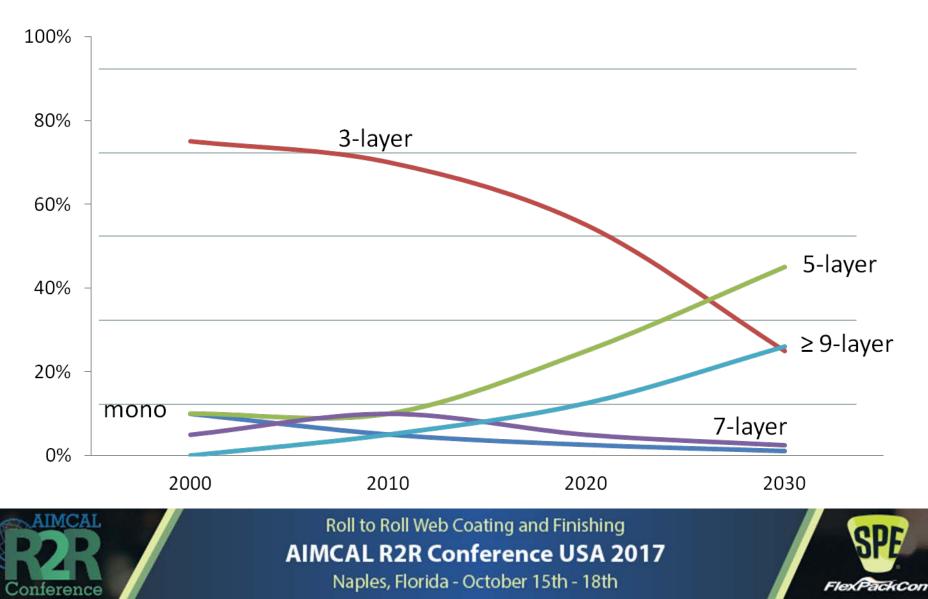

### Roll to Roll Web Coating and Finishing AIMCAL R2R Conference USA 2017

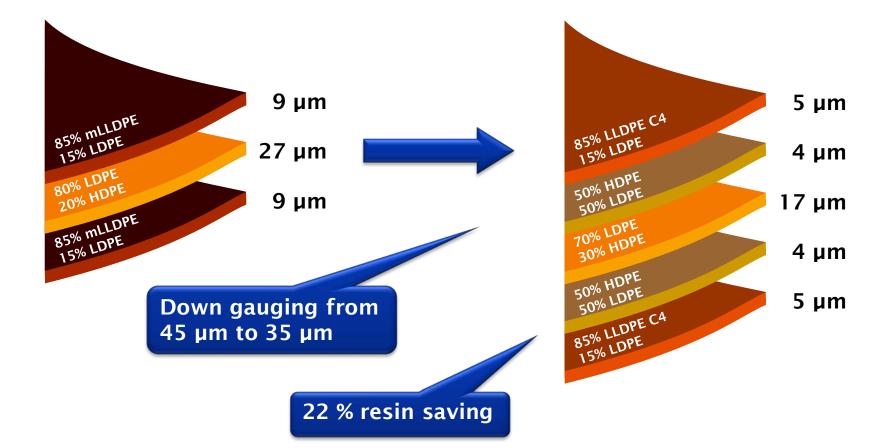

## Multilayer Blown Film Lines Trend Long-term Development Outlook

## **Benefits of a 5-layer Blown Film Line** Example: Down Gauging of Collation Shrink Film

Re-arranging of layers and decreased outer layers allows to reduce the film thickness

Roll to Roll Web Coating and Finishing AIMCAL R2R Conference USA 2017

# **Benefits of 5-layer** Example: Cost reduction through use of cheaper resins

Decreased thickness of outer layers allows cost reduction due to use of standard polymers in layers B and D

#### Roll to Roll Web Coating and Finishing AIMCAL R2R Conference USA 2017

## **Benefits of a 5-layer Blown Film Line** Example: Improved Film Properties
