Optimizing **Big Data** for
Real-Time Business Transformation

Harnessing the Power of Big Data for Connected Brands

Peter Randazzo
Chief Technology Officer
iCrossing

Is Big Data new?

- What and when was the first big data project in the United States?
- What is new?
 - Volume
 - Velocity
 - Processing Power
 - Ambition

1790 - First US Census

Understanding data opportunities

Data talent

Availability of universal data

Volume and Velocity

Instrumentation of operations

Data differentiation

The critical success factor

- Agile Decision Making
 - Accepting change
 - Opportunity
 - Risk
 - Reality
 - Failing fast
 - Testing and revising hypotheses
 - Taking a long view

Who is iCrossing?

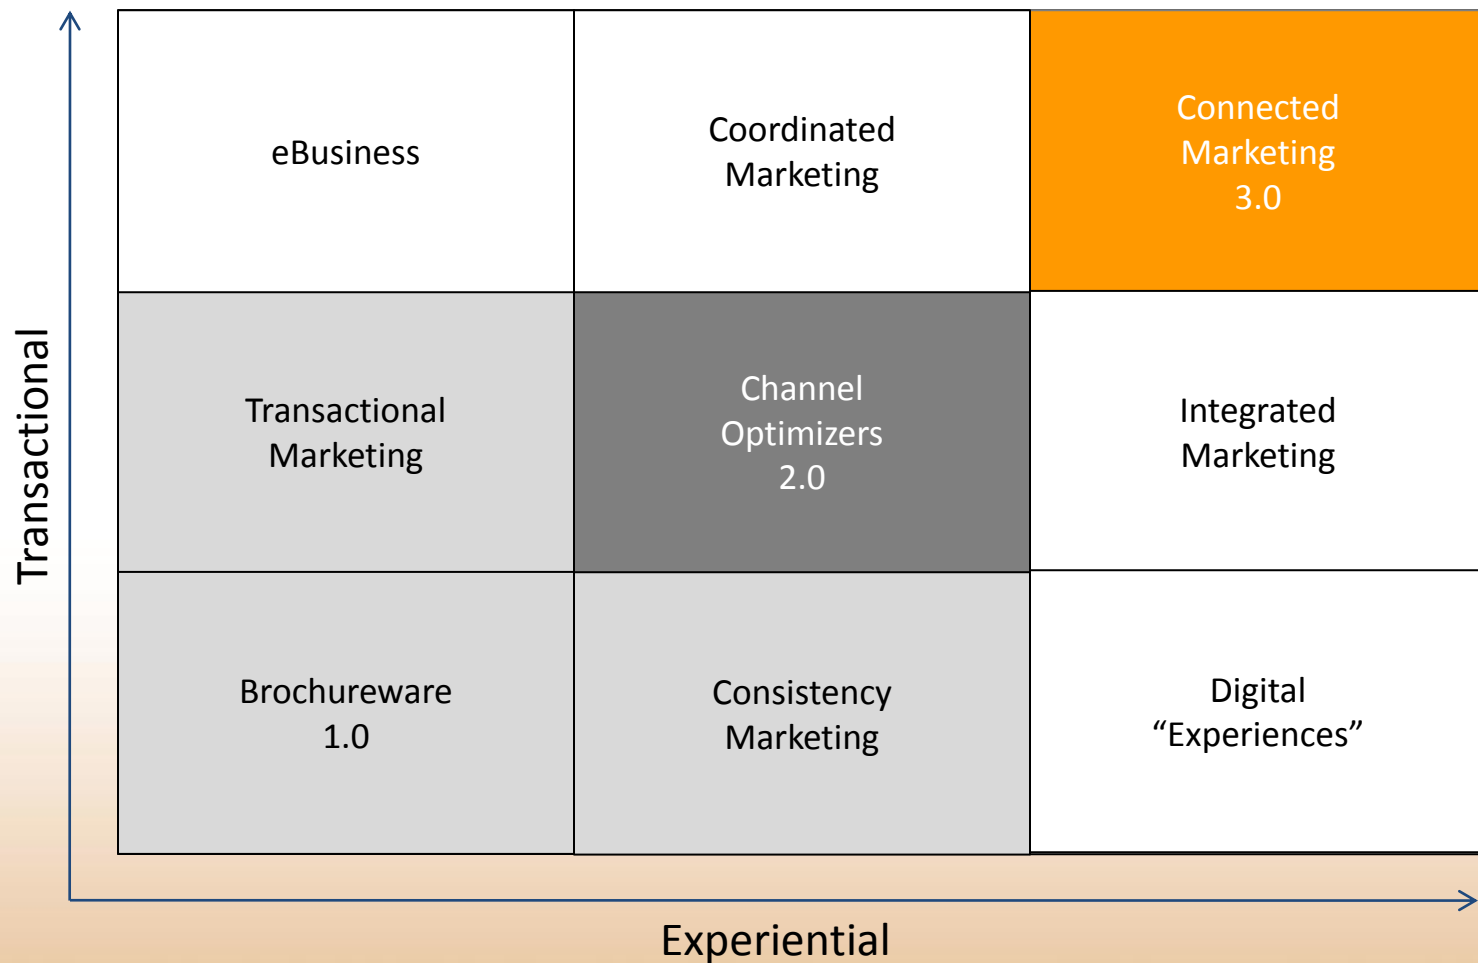

850 people in 19 global offices

We build Connected Brands

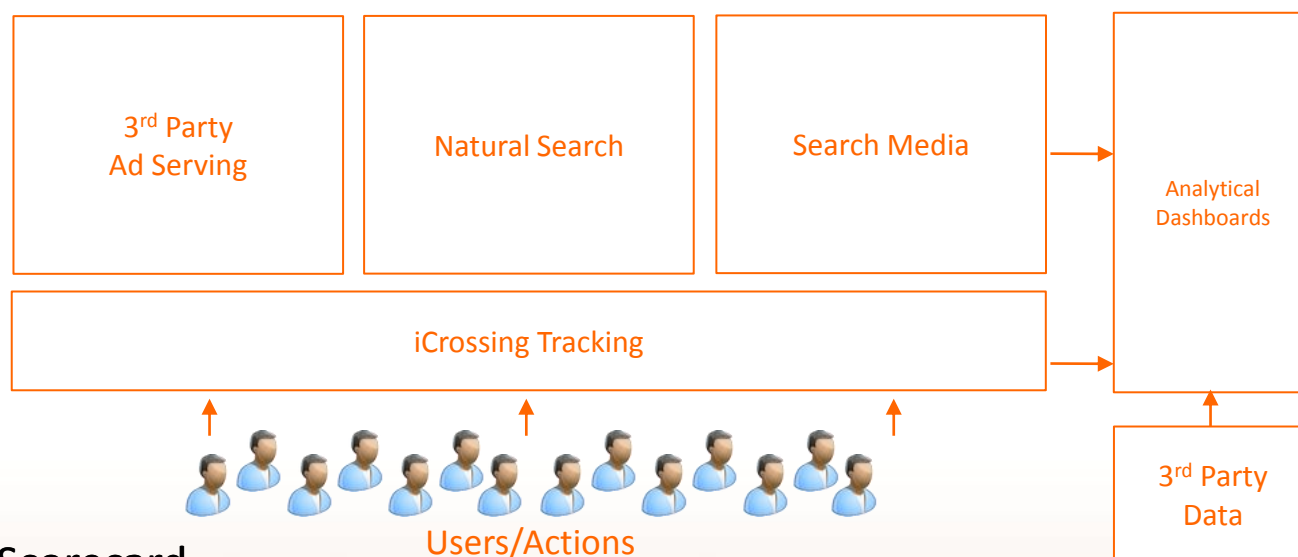

A connected brand **creates a close relationship with its audience** by being **visible, useful, usable, desirable, and engaging.**

We have evolved

2007 : Legacy platform

Big Data Scorecard

Data talent

Data differentiation

Connectedness evolves

An objective look back

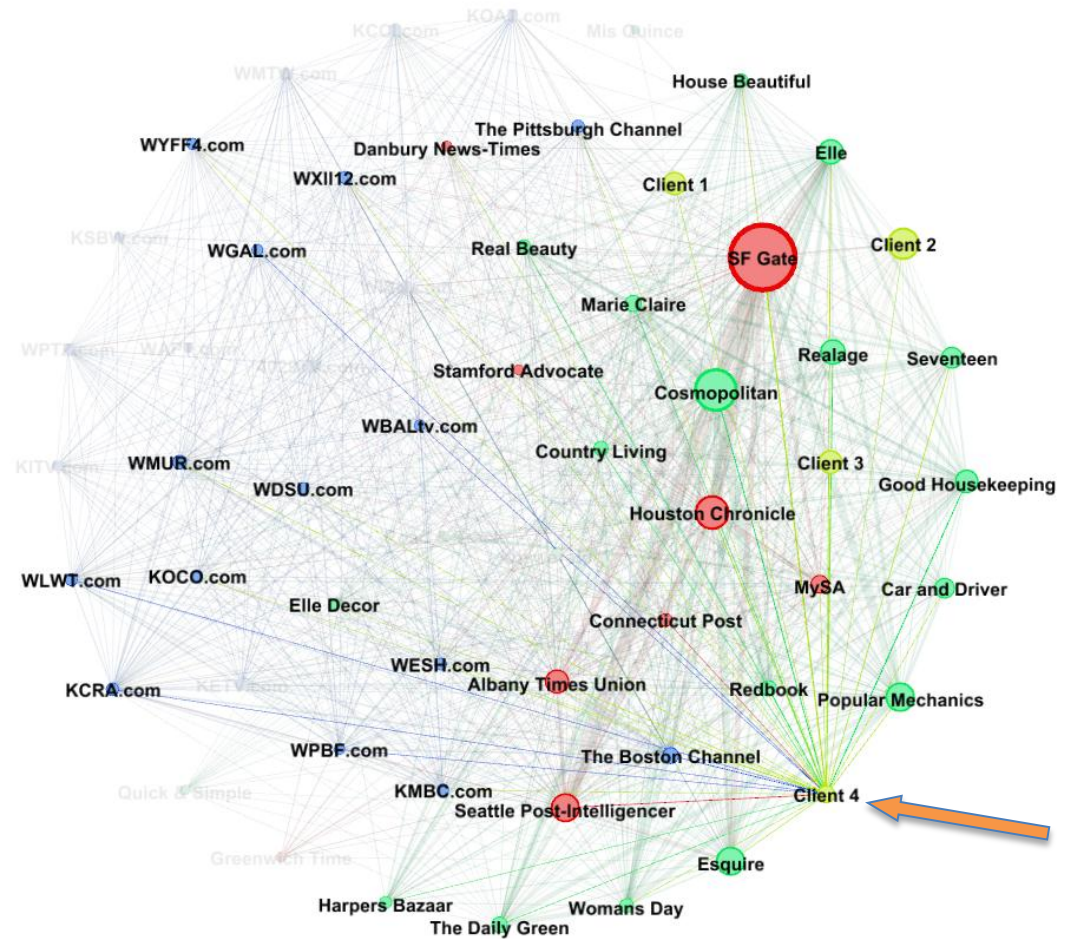

Positive

- Currently processing clickstream, search and audience data for over 130 million monthly uniques in the US
- One universal view of customer across all applications and Hearst NA properties
- Refresh of paid media application completed in 2012

Negative

- Some application refreshes delayed
- Technology personnel needs exponentially higher due to niche skill sets (Hadoop, MapReduce, Netezza)
- Maintaining the long view can be career restricting

The value of sharing

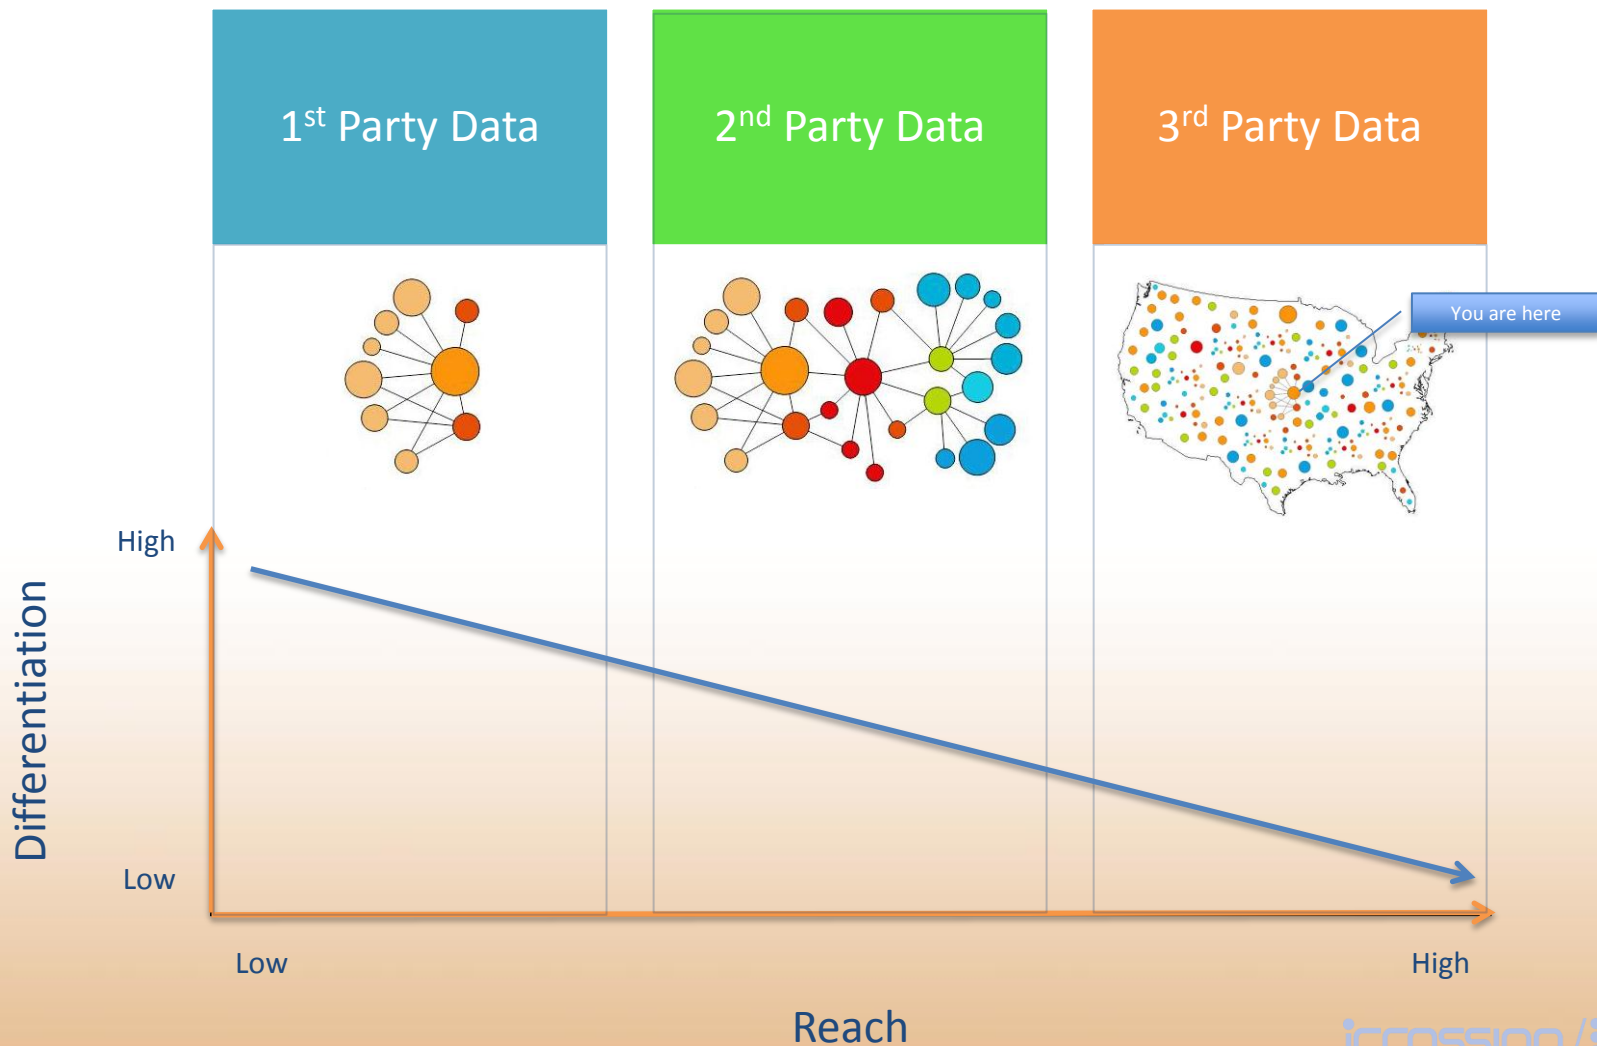

The opportunity

- Site, search, social targeting
- Premium audience profiling and extension
- Pixel management and attribution
- Audience profile management – lifetime visitor value
- Landing page optimization
- SEO automation
- Site-side content personalization
- Dynamic display
- Email ad-insert targeting
- 1st party data differentiation

Reach vs. differentiation

Choose partners carefully

Important Considerations

- Data leakage
- Data security
- Data ownership
- Privacy
- Vested interests

Learnings

Remember DAVID

Data talent

Availability of universal data

Volume and Velocity

Instrumentation of operations

Data differentiation

Be Agile

- Accepting change
 - Opportunity
 - Risk
 - Reality
- Failing fast
- Testing and revising hypotheses
- Taking a long view

THANK YOU!
