

THE EVOLVING DATA CENTER

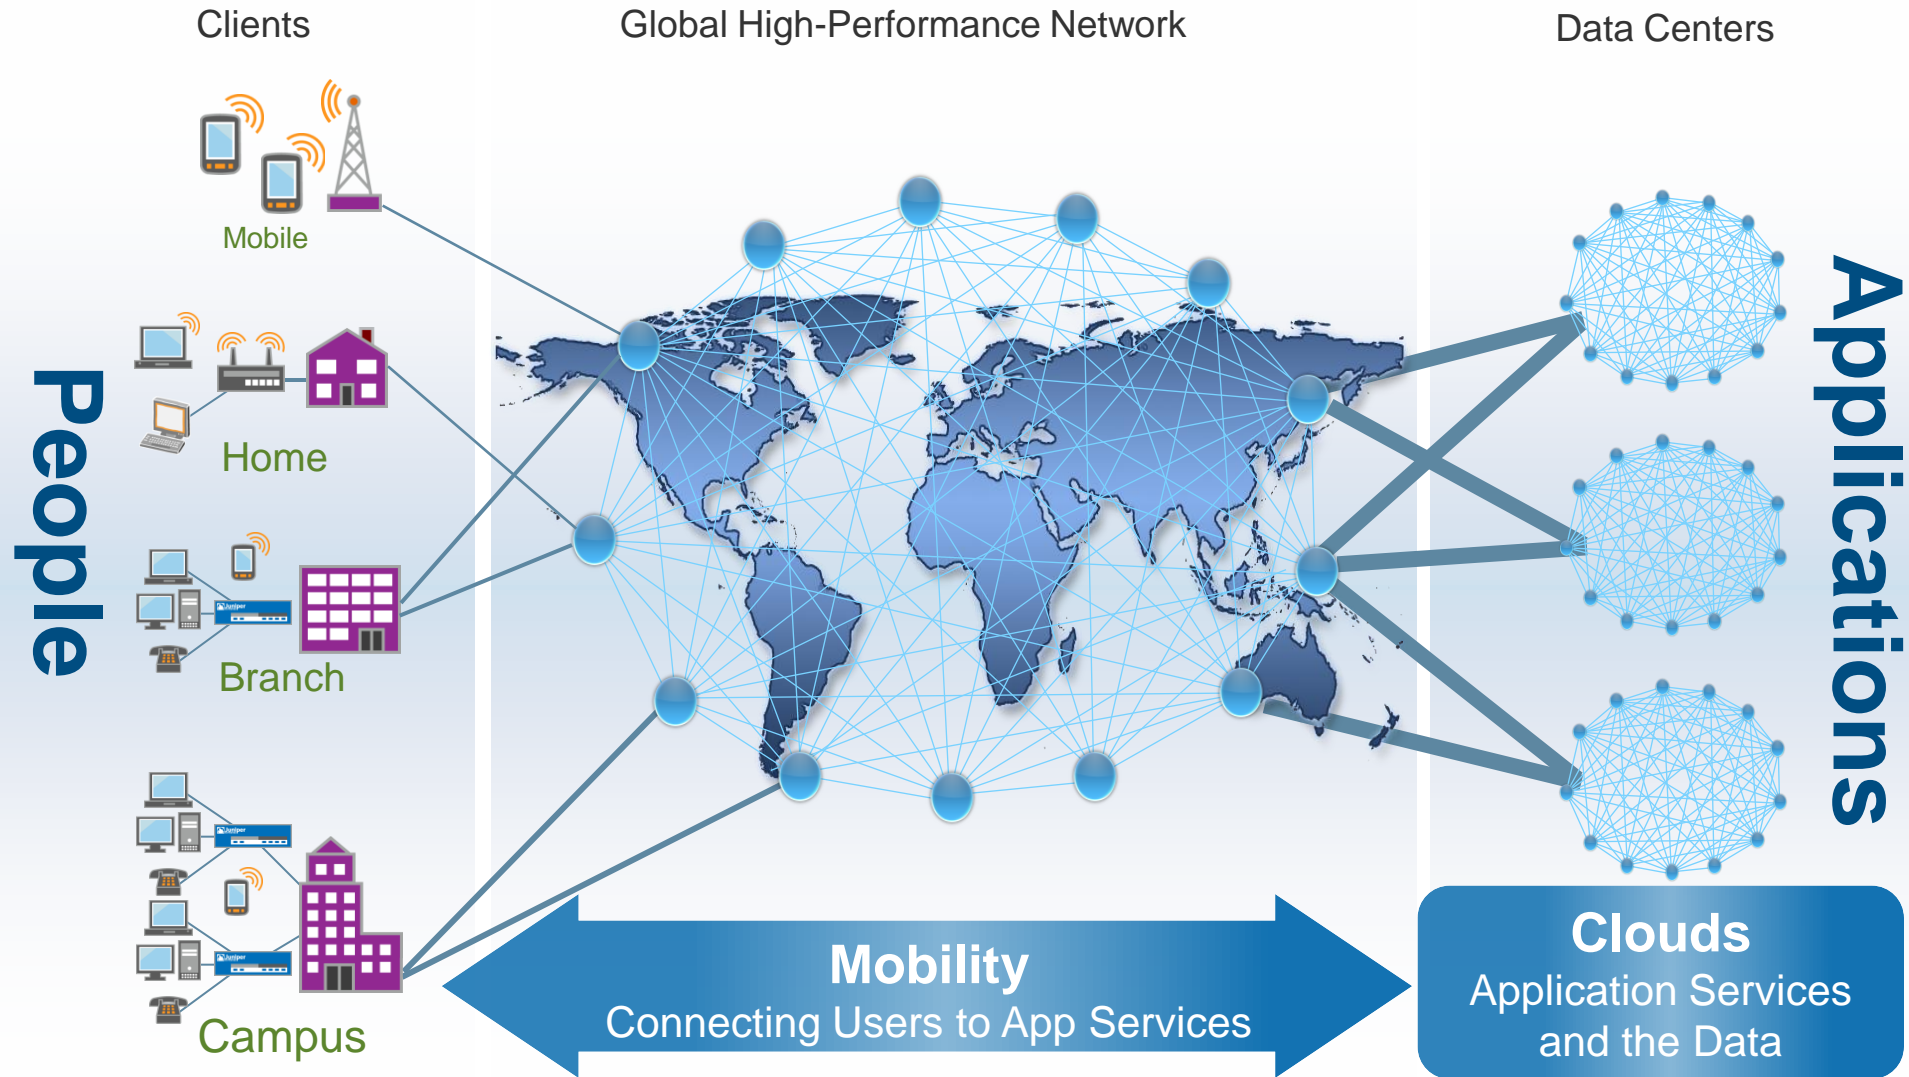

IN THE ERA OF CLOUD COMPUTING

Andy Ingram
Juniper Networks

April 2011

THE 2 ROLES OF IT INFRASTRUCTURE

TODAY'S TRADEOFFS

Data Center Priorities

CUSTOMERS ARE BUILDING CLOUDS

CHANGING ROLES OF THE NETWORK

Traditional role – connecting users

- North-South traffic

Latency Tolerant

New role – connecting devices

- East-West traffic
- Ideally one hop away

Latency Sensitive

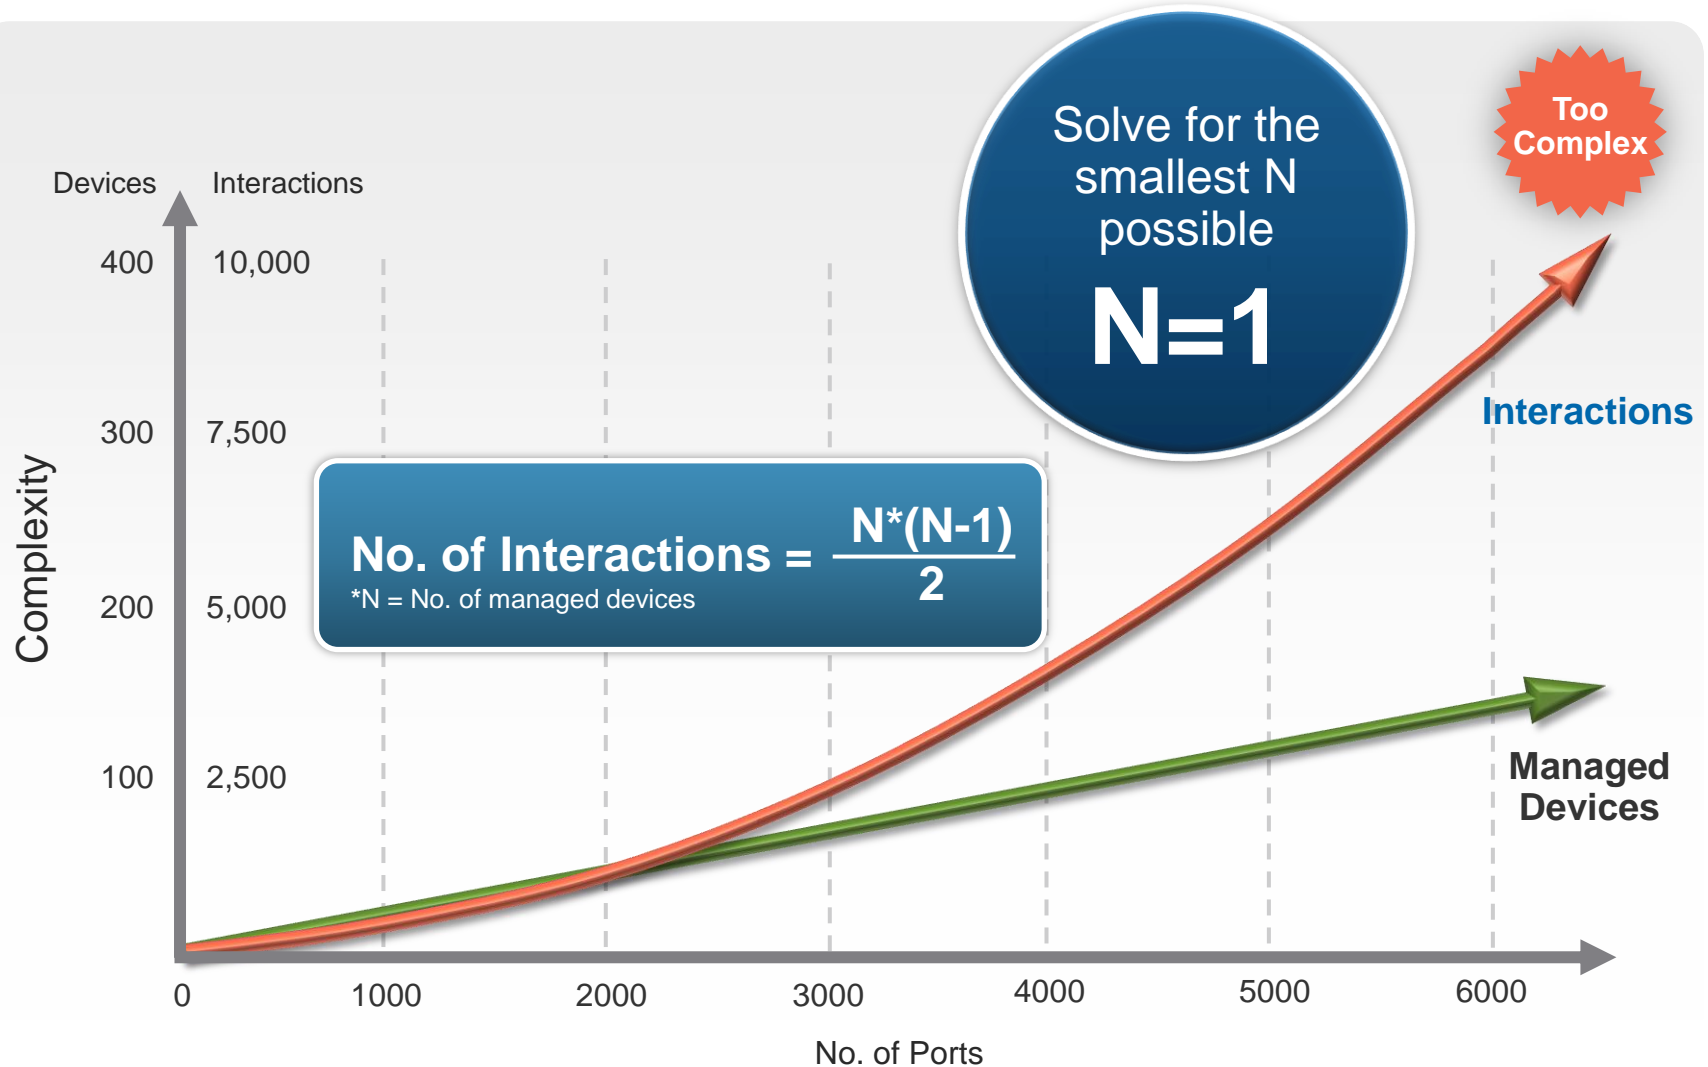

Newest role – foundation of the cloud

- Any-to-any connectivity

Ideally everything is interconnected and always one hop away

COMPLEXITY – METCALF'S REVENGE

THE TYRANNY OF TREES

Typical tree configuration

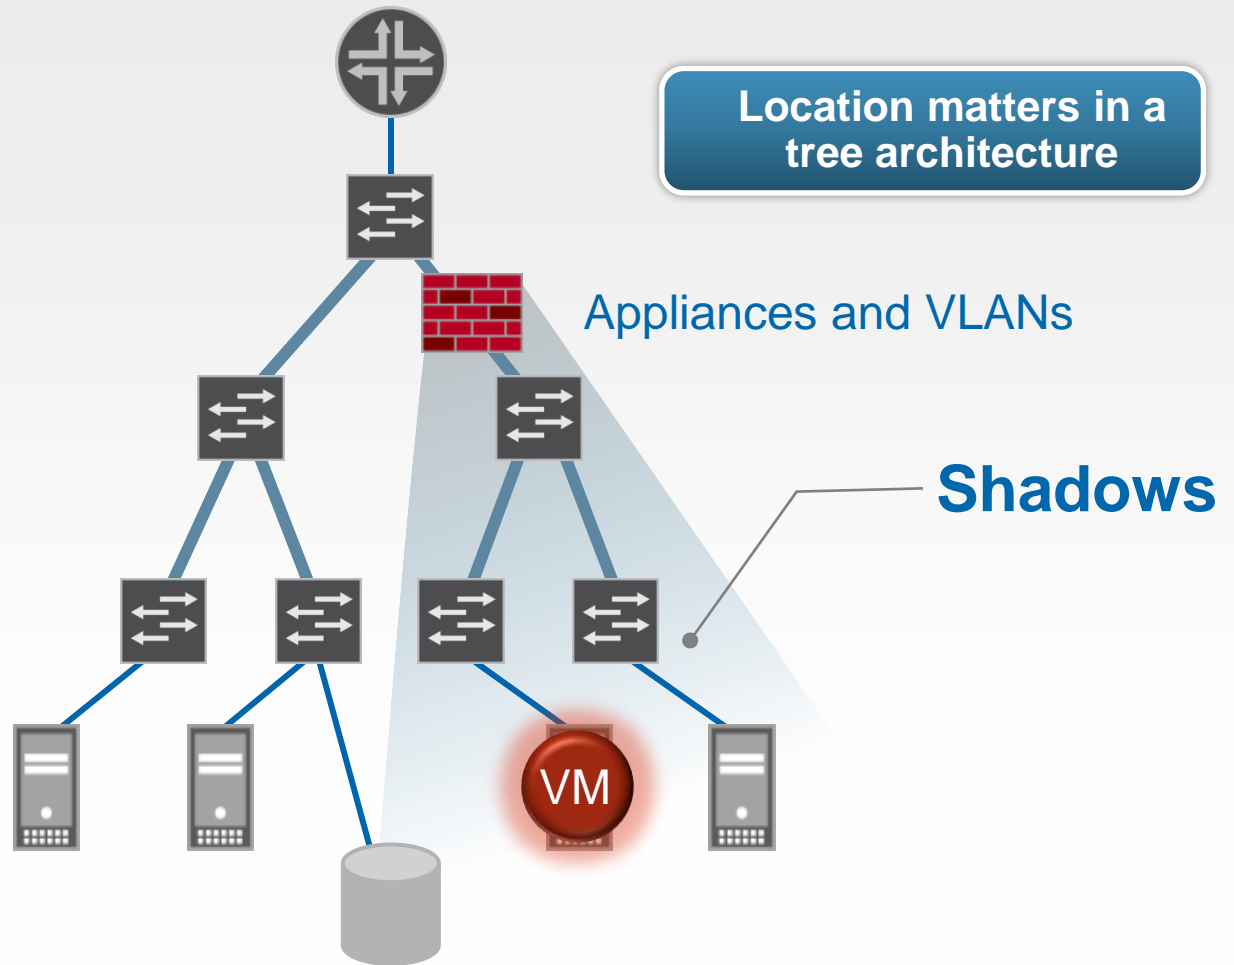

Location matters in a tree architecture

Bubbles
Optimal performance

THE TYRANNY OF TREES

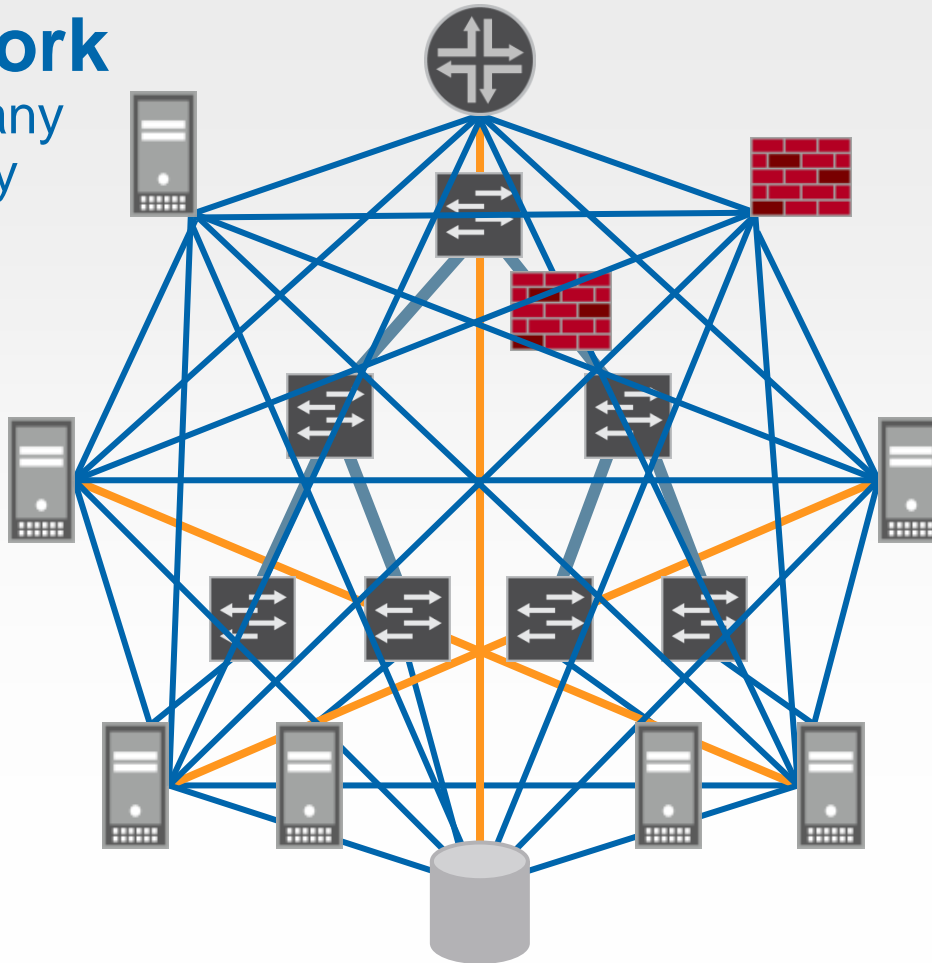

Typical tree configuration

TRANSFORM THE NETWORK

One Network

Flat, any-to-any
connectivity

TRANSFORM THE NETWORK

One Network

Flat, any-to-any
connectivity

Key resources
are one hop away

Key resources
are ALWAYS one
hop away

Locality should not matter in a virtualized data center

TRANSFORM THE NETWORK

One Network

Flat, any-to-any
connectivity

Single device
 $N=1$

Switch Fabric

Data Plane

- Flat
- Any-to-any

Control Plane

- Single device
- Shared state

Performance and simplicity of
a single switch

Single switch does not scale
Single point of failure

TRANSFORM THE NETWORK

One Network

Flat, any-to-any
connectivity

Single device
N=1

Switch Fabric

Data Plane

- Flat
- Any-to-any

Control Plane

- Single device
- Shared state

A Network Fabric
has the....

Performance and simplicity of
a single switch

And the...

Scalability and resilience
of a network

JUNIPER HAS THE ANSWER: 3-2-1

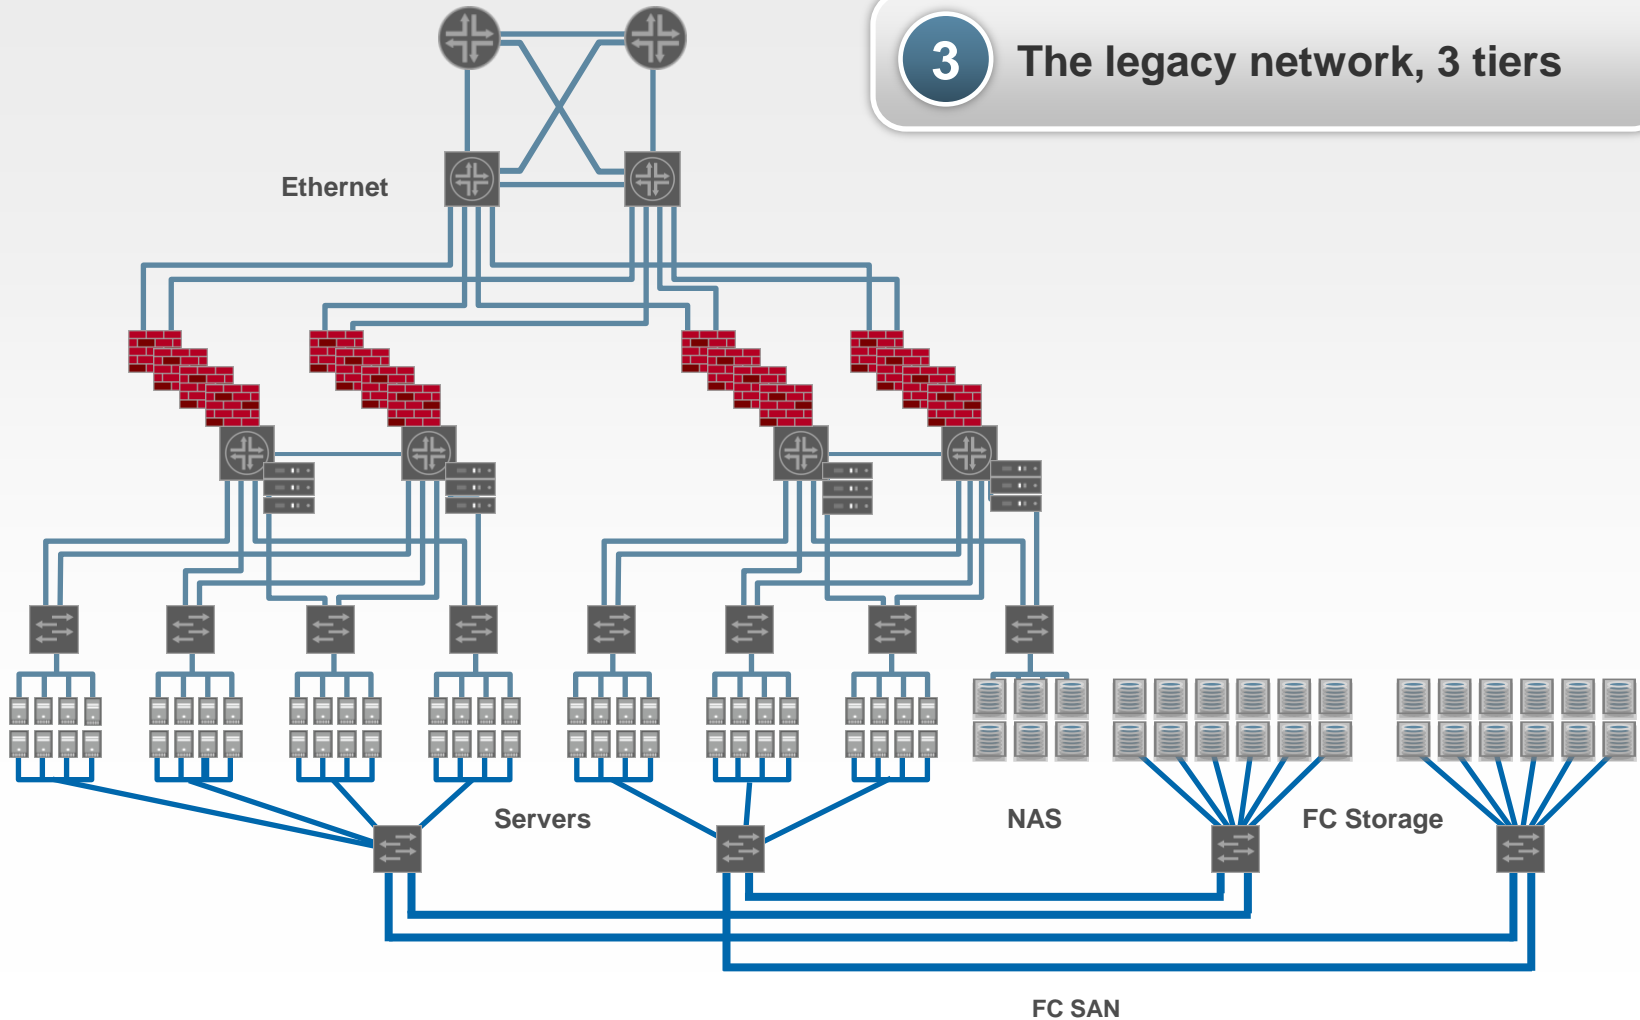

SIMPLIFY THE NETWORK

3 — 2 — 1

3

The legacy network, 3 tiers

SIMPLIFY THE NETWORK

3

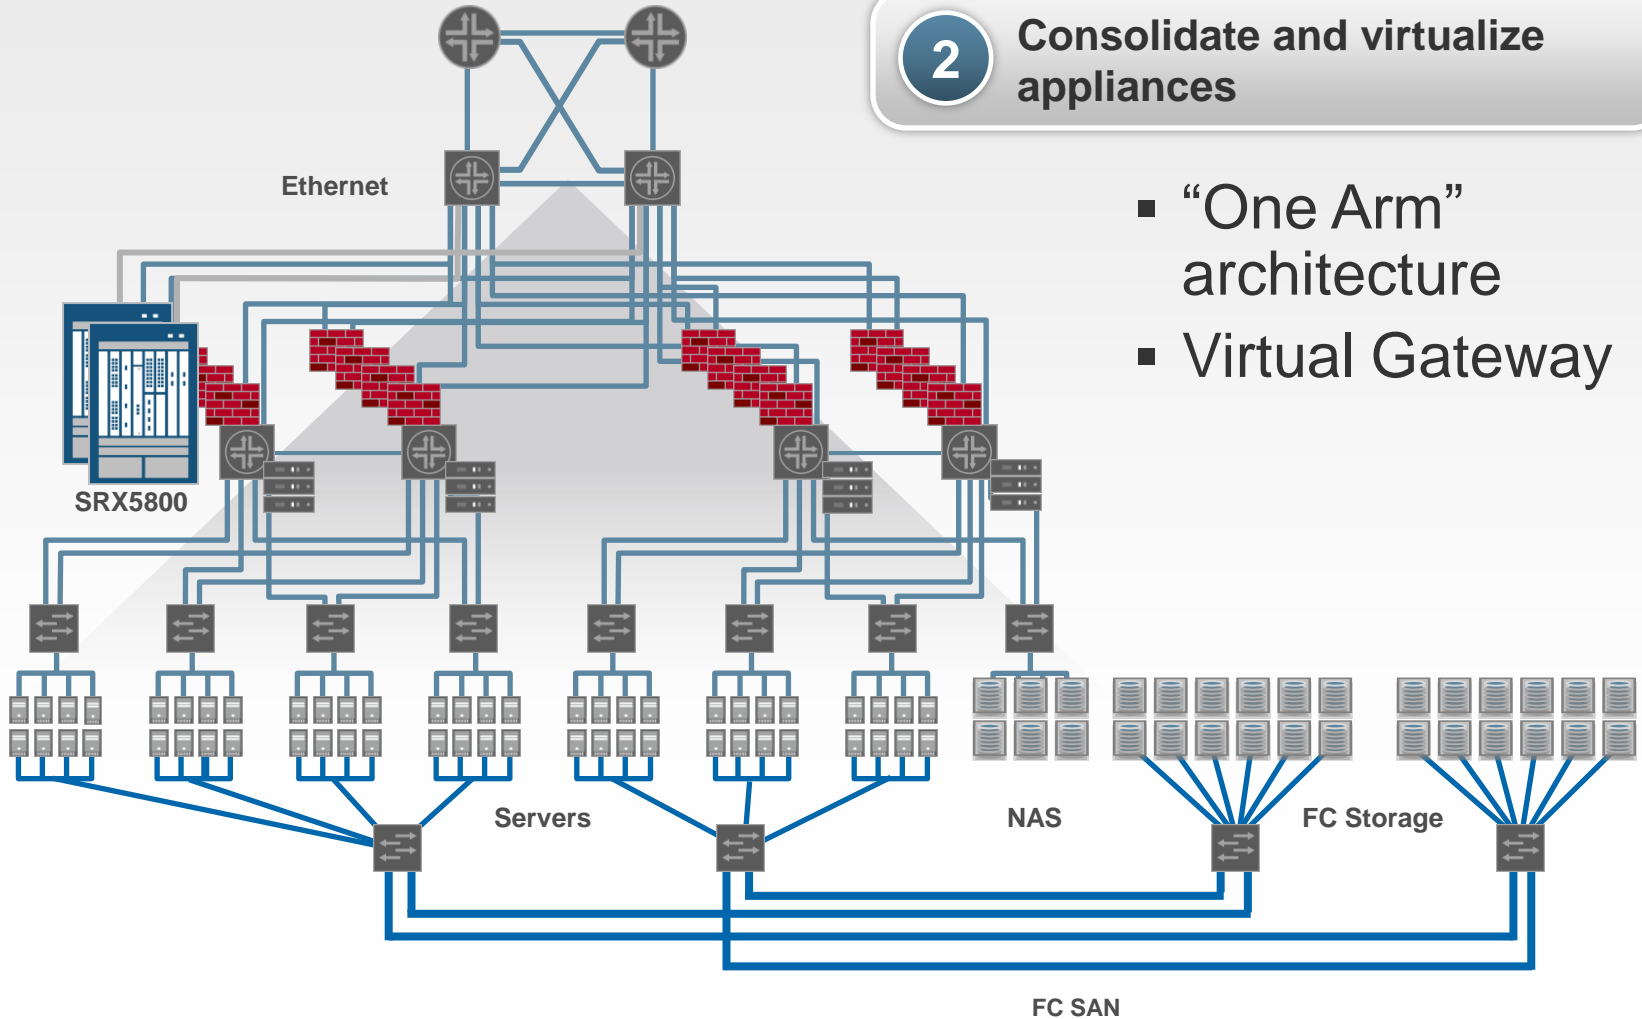

2

1

2

Consolidate and virtualize appliances

- “One Arm” architecture
- Virtual Gateway

SIMPLIFY THE NETWORK

3

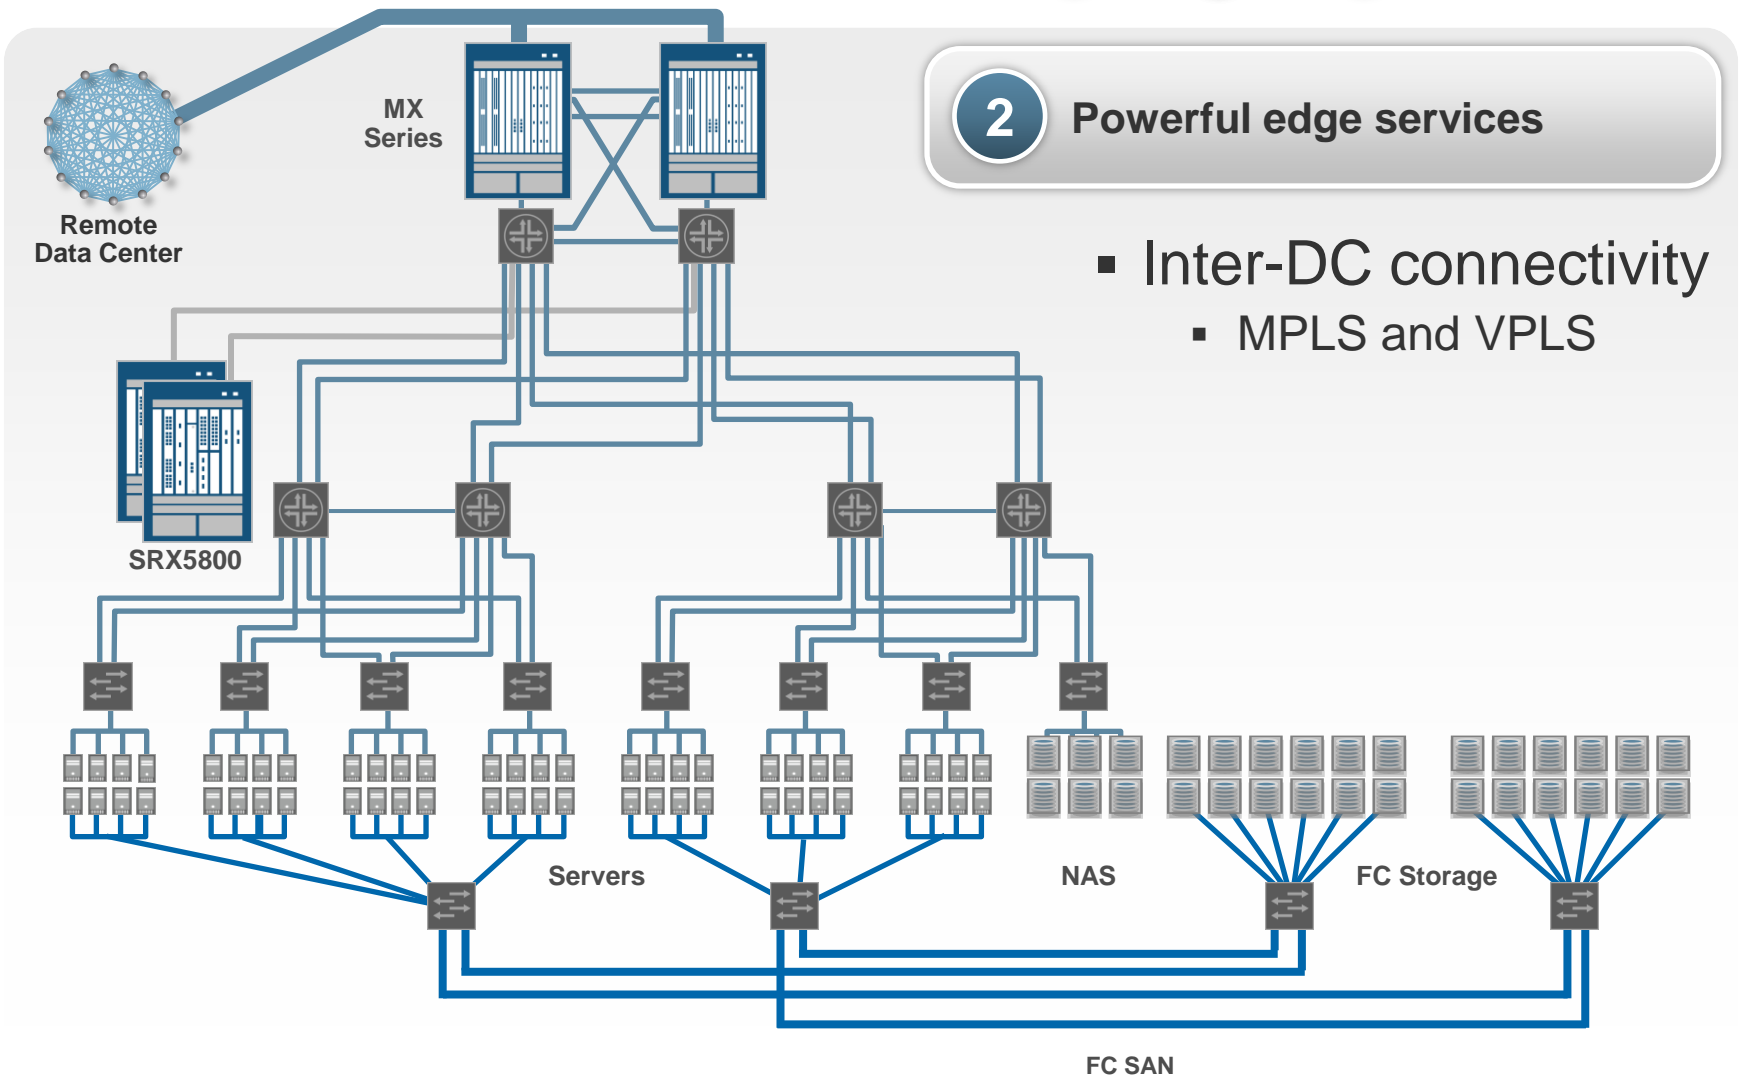

2

1

2

Powerful edge services

- Inter-DC connectivity
 - MPLS and VPLS

SIMPLIFY THE NETWORK

3

2

1

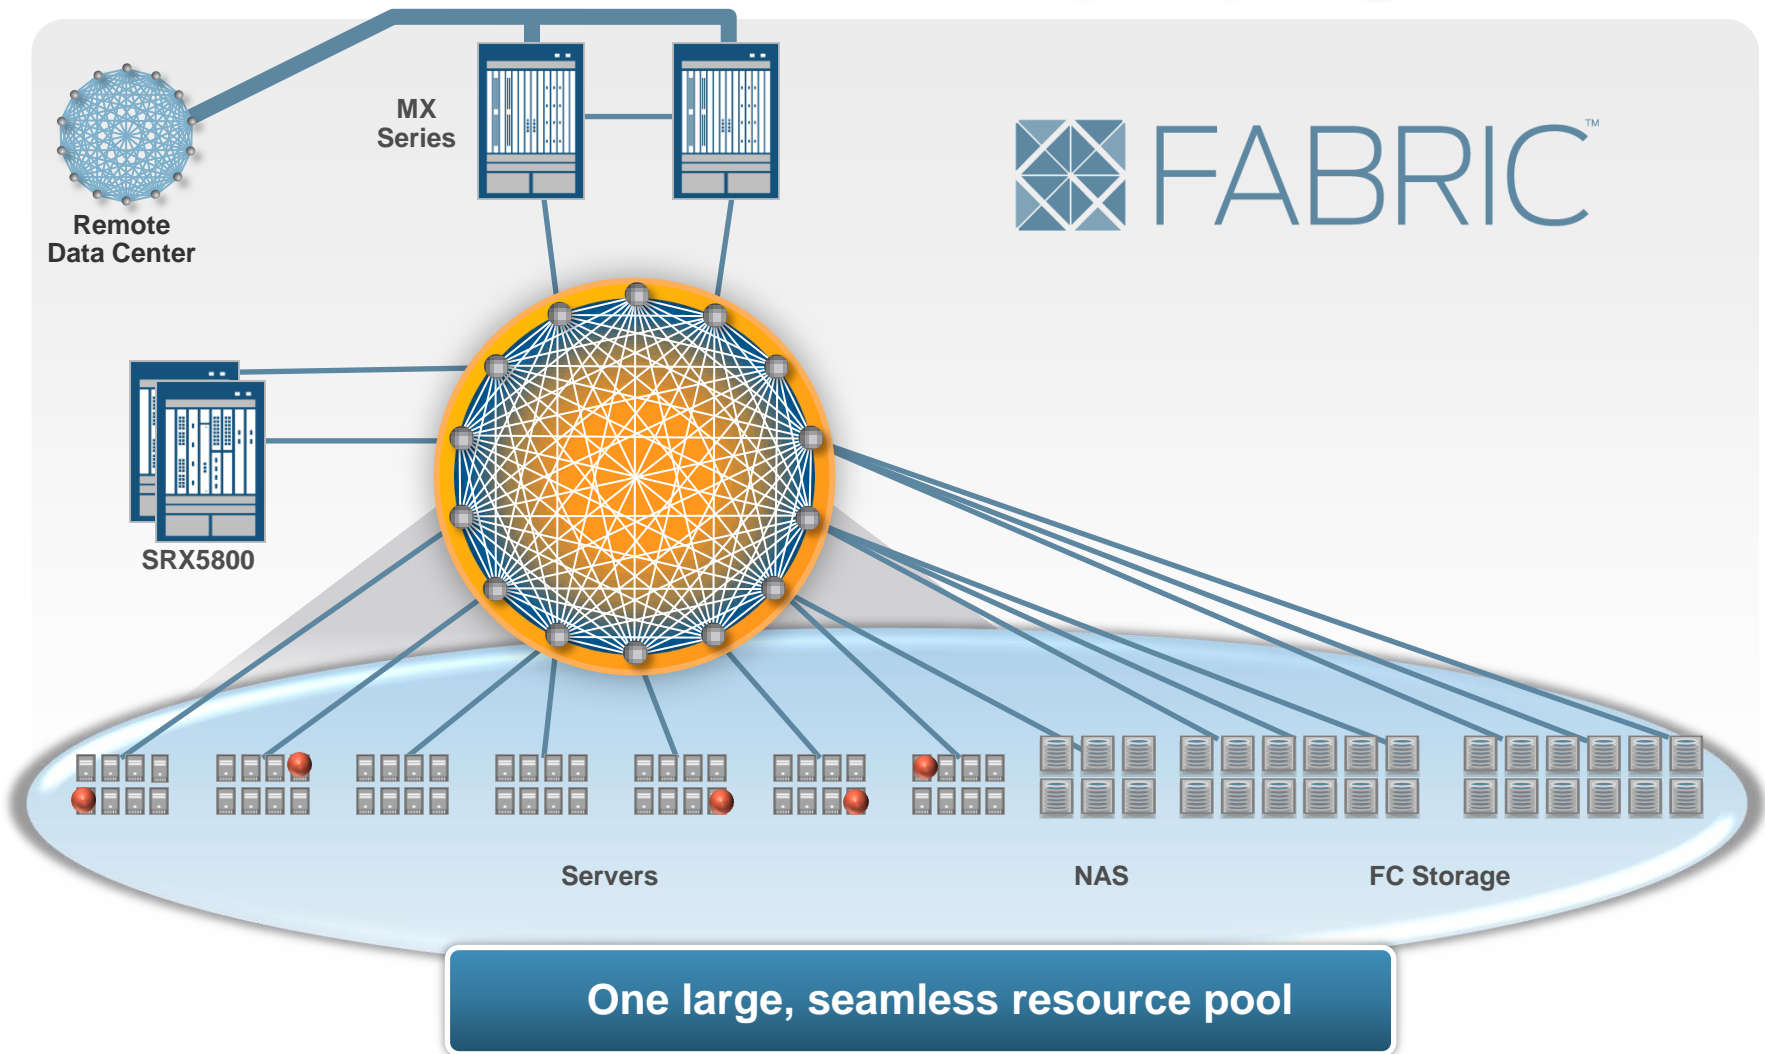

2

Flatten to 2 tiers of switching

1 TIER

3 — 2 — 1

A Revolutionary New Architecture

Design Goals

Flat, resilient fabric

Everything is one hop away

Scale without complexity

The ability to add capacity without adding operational complexity

N=1

**QFabric is a
switch**

A Revolutionary New Architecture

3 Design Principles

Management Plane

N=1

Operational model of a single switch

Control Plane

Federated Intelligence

Only way to scale with resilience

Data Plane

Rich edge, Simple core

Everything is one hop away

DATA PLANE IN A SINGLE SWITCH

Data Plane

1. All ports are directly connected to every other port
2. A single “full lookup” processes packets

SINGLE SWITCH DOES NOT SCALE

Ports can be added to a single switch fabric.

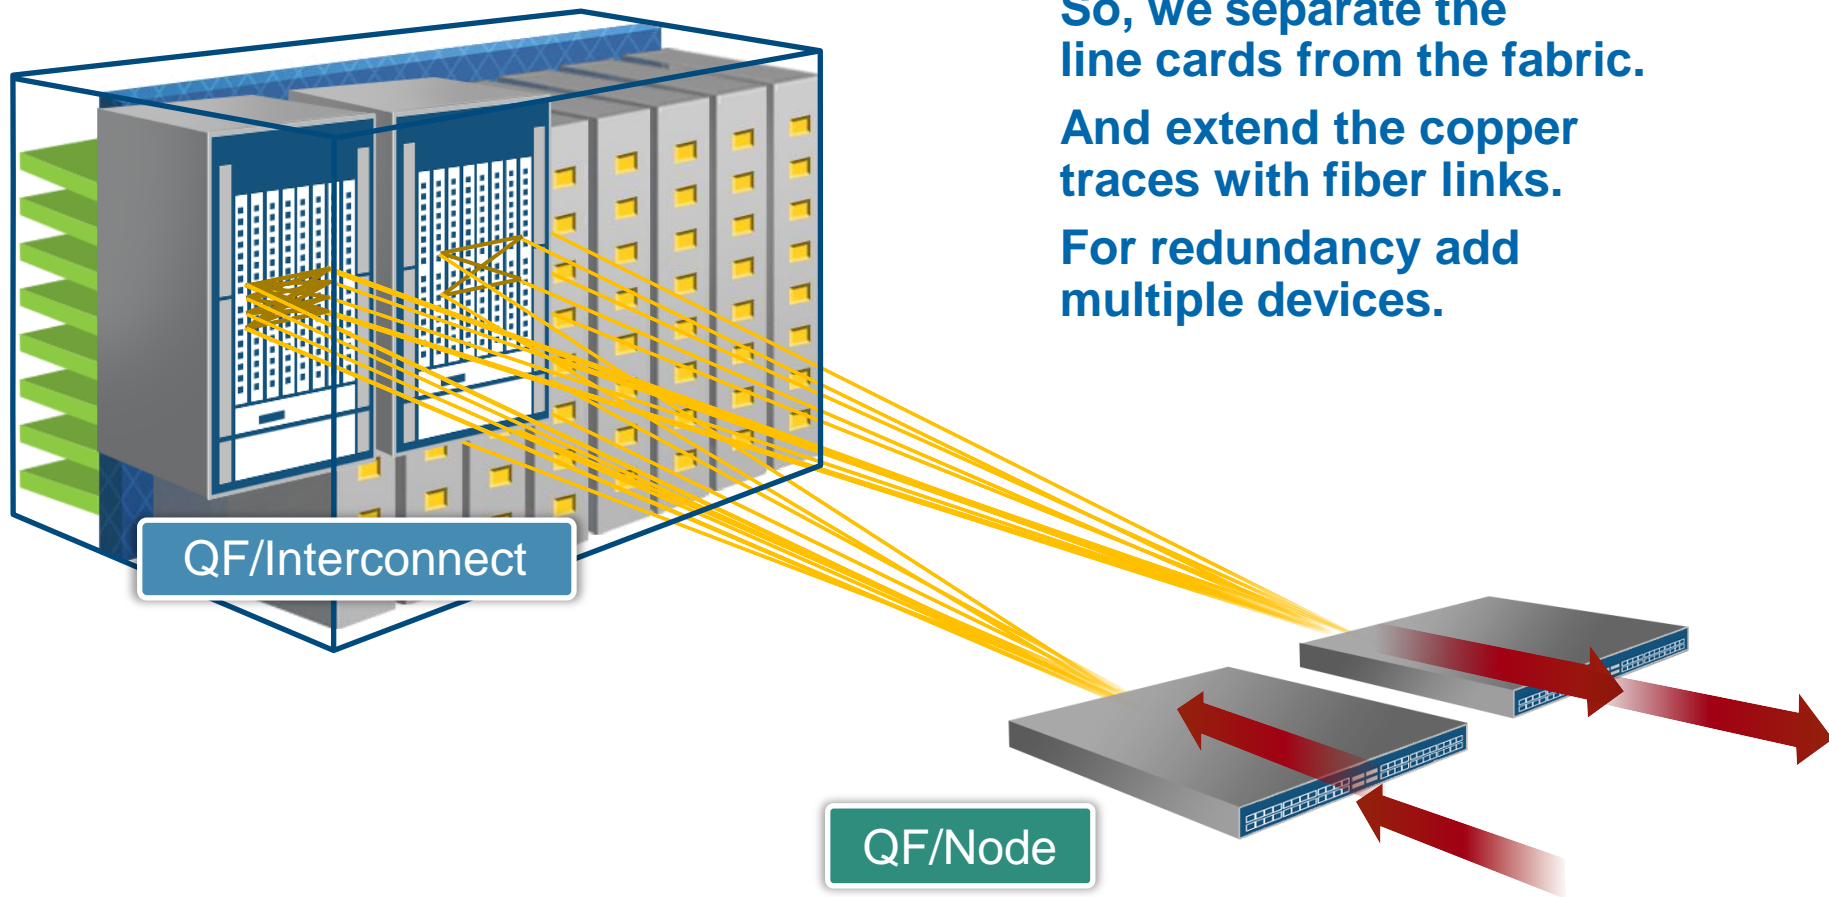

...but eventually it runs out of real estate.

After this, the network cannot be flat.

Choice: Sacrifice simplicity or...
change the scaling model

SCALING THE DATA PLANE

Data Plane

SCALING THE DATA PLANE

Data Plane

QFX3500

QFX3500

<1µSec; Cut-through; 40G

Ultra Low Latency

Full L3; VirtualControl; FC Gateway; HA; VPN

Feature Rich

QFX3500

Converged I/O

DCB; FCoE-FC Gateway; FCoE Transit Switch

Fabric Attach

Unique Value Add to Scale

Low Cost Point Players

Low Cost Base configuration

MIGRATING TO QFABRIC

QFABRIC VS. COMPETITION – 6000 10 GbE PORTS

QFabric

- 1/3 fewer devices ↓
- 77% less power Savings: \$360K/Yr ↓
- 90% less floor space ↓
- 85% fewer links ↓
- 12-16x faster ↓
- Mgd. Devices 1 vs. 193 ↓
- L2 AND L3 ★

The QFabric is faster than any chassis switch ever built!

MULTIPLE PORT CONFIGURATION COMPARISONS

500 ports¹

- 17% fewer devices ↓
- 45% less power
Savings: \$28K/Yr ↓
- 50% less floor
space ↓
- 74% fewer links ↓
- 3-6x faster ↓
- Mgd. Devices
1 vs. 18 ↓

1000 ports¹

- 22% fewer devices ↓
- 46% less power
Savings: \$33K/Yr ↓
- 50% less floor
space ↓
- 80% fewer links ↓
- 3-6x faster ↓
- Mgd. Devices
1 vs. 32 ↓

3000 ports²

- 30% fewer devices ↓
- 73% less power
Savings: \$180K/Yr ↓
- 85% less floor
space ↓
- 82% fewer links ↓
- 12-16x faster ↓
- Mgd. Devices
1 vs. 98 ↓
- L2 & L3* ★

6000 ports²

- 33% fewer devices ↓
- 77% less power
Savings: \$360K/Yr ↓
- 90% less floor
space ↓
- 85% fewer links ↓
- 12-16x faster ↓
- Mgd. Devices
1 vs. 193 ↓
- L2 & L3* ★

FABRICTM

Performs

Every
application
performs
better

Scales

Build large,
efficient
clouds

Simplifies

Less hardware

Operational
simplicity of
a switch

Greater
reliability

Lowest Cost

Elegance of
design
delivers lower
OPEX and
CAPEX

TIMING AND DIRECTION

Timing

QFX3500 is shipping

QFabric is in customer trials

QFabric ships in H2 2011

Future directions

Scale down – Micro-Fabrics
Under 800 ports

Scale up – Mega-Fabrics
10s of 1000s of 10GbE ports,
100s of thousands of
Virtual Ports

40 GbE and 100 GbE
access speeds

Provide a fully blended
fabric with full fibre
channel services

A REVOLUTIONARY NEW ARCHITECTURE

**Performance and
simplicity
of a single switch**

**Scalability and resiliency
of a network**

NO COMPROMISES

Data Center Priorities

WHAT IS
NOW
POSSIBLE

FABRIC™

everywhere
