Change Management: Essential for Organizational Success

Khaled Al-Mobarak, President, Mawj Management Consulting, Kingdom of Saudi Arabia

In today's business environment where change is constant, technology is available and finding skilled talent is hard, managing change and change competency organizations are the key differentiator between those businesses that succeed and those that fail. The key is not that organizations must continually change, but how fast can you change plays a vital role in moving an organization forward, bypassing the competition.

With rapid change in technology, communications and information organization must examine the fundamentals of their organizations. To survive and succeed organization must continuously adopt and smoothly & quickly accept changes and endorse it.

Based on research, from Harvard business review, 70% of all "change" projects fail. Applying "Change Management" to your project will significantly increase the percentage of your project success based on result from 4500 organization from around the world based on Prosci Research over 18 years.

Sponsorship from Management, Effective Communication & excellent Resistance Management are the ingredients for successful Change.

This presentation is a great foundational for Executives and professionals to understand change management. To clearly see the ROI of change management and what are the benefits of implementing change management in

organizations. How implementing change management for change projects in the organization will significantly increase the success of projects which will in turn contributes to the success of the organization.

13:00 - 13:30

NHS Safety and Quality Improvements & Risks at Calderdale Huddersfield

Rod Gamble, Programme Director, Calderdale Huddersfield Foundation Trust, UK

The implementation of an electronic patient record at a Green Field Hospital carries significant benefits but is not without risk. Clear safety benefits come from a single source of truth and a new closed-loop medication process. Assumed benefits represent the biggest risks to safety and are being guarded against by using a clinically-driven design, test and training approach.
