# Identify, measure and compare actual performance against planned performance.

## Video-based Artificial Intelligent Business Process Monitoring Service. We can help you.

Artificial Intelligence Group's business activity monitoring service helps management gain insight into important transactions and processes that directly impacts their business using our clients existing CCTV system. Our business process monitoring service through Deep Machine learning enables an organization to control, measure and analyse process performance to identify critical process problems proactively.

AIG presents our clients with daily written reports and related visual video footage on a customisable app to make prompt decisions that will not only alert security related concerns proactively but also improve the speed, quality and efficiency of business processes.

## Overview

### Get the complete video analysis in one place

We extract all video content information from your existing CCTV system through to our cloud-based AI servers. AIG's AI processes your videos to recognize people, expressions, behaviour, events, processes, procedures, objects, places, sounds and speech.

### Save time and money when you need proactive results

Take the pain away from manually going through your CCTV footage and let AIG's AI monitoring service generate video tags, categories, summaries, and overview reports sent directly to your smart devices proactively when it happens.

### Adaptable to your needs

When you need something recognized for your specific application, AIG's AI can be adapted to understand the set of concepts that are most relevant to your business.

# Secure AI video-verified reporting with visuals to monitor Processes, Critical events, Customer Service, Theft, POS, Staff Behaviour, Health and Safety and much more...
