Our Vision

We are changing lives!

Back in 2008: Thomas Moser and Martin Öller liked the idea of having a home in which the majority of functions like safety, energy efficiency and comfort could all be centrally controlled. After all, this was at a time where cars could already parallel park themselves and robotic lawnmowers could take care of the gardening. So why were homes so far behind?

Both Martin and Thomas wanted intelligent and convenient automation in their own homes, so they scoured the market for something that would meet their needs, but found what

was on offer to be impractical, complicated and expensive. Martin Öller recalls: "We wanted a solution that was highly intelligent, simple to use and yet affordable! We wanted to have a system where the lights would turn on and off automatically and at the right brightness for the time of day; we wanted a system intelligent enough to close the blinds and curtains automatically based on the position of the sun and a system that maintained the perfect temperature in every room."

And so the concept of Loxone was created. Initially, Martin and Thomas developed it just to meet their own needs, but now it's for everyone.

"A Loxone Smart Home is not only comfortable, energy-efficient and safe, it's also convenient. It runs automatically, without any manual input from me."
Thomas Moser, Founder & CEO

Our headquarters:
The Loxone Basecamp

Our Mission

Everyone lives in a Loxone Smart Home

We see living in a smart home not as a luxury, but as a contemporary living model for everyone. The guiding idea of the two founders is the driving force behind every Loxonaut, every day, at every step. More than 250 employees around the world are passionate about Loxone Smart Homes and are committed to making them affordable and accessible for everyone.

“Our mission is to bring the Loxone Smart Home to the world and to change the way people live.”

Thomas Moser, Founder & CEO

Welcome to a Real Smart Home.

Even before you get up in the morning, the house gets to work. Your blinds open gradually to wake you with natural sunlight whilst soft music fills the room.

Imagine, before you're even out of bed, your home turns on the heating and lighting, opens the blinds throughout the house and warms the towel rail for you... without you lifting a finger. If you get up in the night, low-level lighting guides your path to the bathroom or to check on the children. Once you're back in bed, it switches off again.

Protection around the clock.

Your home is always looking out for you. Whilst you're asleep, it keeps watch, alerts you to any intruders and sounds the alarm in an emergency. It can warn you

about dangers such as fire or water leaks and light a path to safety. Your Loxone Smart Home gives you peace of mind, around the clock.

Your Loxone Smart Home knows you.

A Loxone Smart Home greets the first person who returns home with a welcoming warmth and the reassuring feeling that everything is alright. That's thanks to the heating system, which thinks for itself; in fact, it learns how to improve and becomes more efficient over time. It makes sure you're always comfortable in every room and saves energy in rooms that are not being used.

Once everyone has left the house, security mode kicks in. All sensors go into alarm mode: doors lock, lights are switched off and the heating is lowered. When you go away on

A Loxone Smart Home takes care of you.

holiday, the house mimics your everyday actions to deter would-be intruders. Upon your return, the house is already warm and cosy, just how you like it.

As a nation, we're obsessed with the weather, and your home should be no different. Come rain or shine, your home will make the most of it. If you have large glass windows or doors, your blinds and shading can automatically adjust to the path of the sun, and close during the day to prevent rooms from overheating. Similarly, if you have a solar PV system, your home can run the washing machine, dishwasher or even charge your electric car using

the free electricity you're generating from the sun.

Your personal assistant

Waiting for an important parcel to arrive? Your home will let you know when it's there. Keep forgetting to close the garage door? Your home will gently remind you or even close it for you automatically. Life at home is like flying on autopilot! It takes care of the daily running of your home for you, however, if you ever want to change something, a single click on a switch or smartphone is enough.

A Loxone Smart Home brings you happiness. It makes your home smarter, safer, more comfortable and energy efficient. The best bit? It may even make the neighbours a little jealous!

A home like no other

A Loxone Smart Home thinks the way you do. It understands which lights to turn on, which music to play and your preferred room temperature for different times of the day – whether it be in the morning or evening, or specifically when you're cooking, relaxing or having guests over. This level of comfort can only be experienced in a Loxone Smart Home.

Always the right temperature

In a Loxone Smart Home, it's always a pleasant temperature. The heating in each room can be individually controlled, which means if you like a toasty warm bathroom in the morning and a cool bedroom at night, your home will take care of this automatically for you. When you're away from home, the heating is lowered to save energy.

Lighting with the wow factor

Lighting has the power to transform spaces and atmosphere; it offers an excellent way to create drama and contrast within your home. With Loxone, you can choose from a palette of colours and combine different lights and brightness levels to create your own range of 'moods'.

Multiroom audio

Multiroom audio allows you to listen to a wide range of music in different rooms of your home and to have your music follow you as you move between rooms. Wake up to your favourite song in the morning and listen to relaxing music in the evening, for example.

Shading that works for you

In the morning, your bedroom blinds will open gradually to welcome in the day, whilst downstairs the blinds open fully to allow the sunshine to assist with heating your home. At dusk, your blinds will close to give you privacy.

Goodnight button

Use the Goodnight button for an effortless bedtime routine. One click is all you need to turn off appliances, switch off the lights and arm the alarm, leaving you free to sink into bed and drift off into a peaceful sleep.

Did you know?

The average person carries out over 150 different tasks daily in their home, from switching off lights to locking doors. Over a single year, that adds up to around 50,000 potential actions! This is where the smart home can help – it takes over these daily habits and frees up your time for the more important things in life.

Simple control

Living in a Loxone Smart Home is like flying on autopilot! It takes care of you. Should you ever want to change something, a single click is enough.

Your home at your fingertips

Your Loxone Smart Home takes many daily tasks off your hands, giving you time to focus on the more important things in life.

Here at Loxone, we believe that despite the intelligence flowing through every vein of your home, you shouldn't need a complicated touch panel to keep control. Who wants to constantly turn lights on and off with their phone? A Loxone Smart Home can bring your lights on and switch them off again automatically, but if you prefer to turn the lights on from a switch on the wall, you can do so. A standard layout for every switch in your home ensures you're never left wondering 'which button does what?'.

We've designed a beautiful app for the Loxone Smart Home for when you want a little more control. Use it for setting the desired temperature in the bathroom, selecting your favourite playlist to accompany your inner-chef efforts in the kitchen, or simply to see an overview of your home's energy consumption, for example.

The nice thing about this functionality is that your home doesn't need your interaction. It runs perfectly without the app, so it's simple and fuss-free for all the family.

Our recommendation

To keep things simple, we recommend you have the same function for each switch in your home. Use the central touch point for lighting and the four corners for blind and music control. Easy to remember, even for guests.

Your home keeps watch

Your home is always looking out for you. Whilst you're asleep, it keeps watch, alerts you to any intruders and sounds the alarm in an emergency. It can warn you about dangers such as fire or water leaks and light a path to safety. Your Loxone Smart Home gives you peace of mind, around the clock.

Full alarm functionality

You don't need any additional, expensive alarm equipment as part of a Loxone Smart Home. Existing components in your home can be combined to create a fully integrated alarm system which reliably alerts you to any danger.

Presence simulation

If you're on holiday, you can rest assured that your home will behave as if you were home, at least it will seem so from the outside. Your home will mimic your presence by activating the blinds and lighting according to your usual routine.

Fire & flood protection

If smoke or fire is detected, your home will immediately alert you with flashing lights and a phone call. Emergency lighting can guide residents to safety and blinds open to alert passersby and give easier access for emergency services. Should a water leak be detected, your home will bring this to your attention so that you can act quickly to minimise any damage.

Alarms and notifications

As you leave the house, your Loxone Smart Home switches to 'Away Mode': in the event of an alarm, whether that's in the form of a break-in, a fire or a water leak, you'll be the first to know via an email, phone call or push notification.

Did you know?

Preferred break-in points are unsecured doors and windows on the ground floor. By installing an intelligent security system, you can enjoy peace of mind that you can check in on your home at any time, and be alerted at the first sign of trouble.

Intelligent energy management

A Loxone Smart Home manages energy automatically. It helps you make the most of the electricity you produce yourself and can help you to save energy. During the daytime, you can use your self-produced electricity to run appliances without paying a penny. When not in use, devices on standby can automatically be switched off to reduce power consumption.

Working in harmony

In your home, the heat of the sun can be captured to bring the rooms to a comfortable temperature. Whether you have a fireplace, large windows, or use solar heat pumps, your rooms will be intelligently heated to reach the desired temperature whilst ensuring energy is not wasted.

Standby killer

Your smart home automatically takes all of your standby devices and other power guzzlers off the grid when they are not needed to help you save on your energy bills.

Produce your own energy and optimise how you use it

The self-produced energy in your home will be efficiently used whenever it is available. This allows you to do a load of washing, run the dryer or use the dishwasher without it costing you anything.

Discover energy saving potential

A Loxone Smart Home can intelligently monitor your home's electricity consumption as well as your electricity production. You can view these statistics directly from your smartphone at any time.

Enjoy free car charging

If you have a solar PV system and an electric car charging system, your Loxone Smart Home could help you charge your electric car for free. It intelligently balances the electricity demand within the home, and channels any excess electricity to your car charger.

Did you know?

Research has shown that lowering the average temperature in your home by 1 degree can save up to 8% on your heating bills. We recommend that you lower the room temperature by 3 - 4 °C at night and when you're not home, but don't worry, your Loxone Smart Home can do this automatically for you.

My home. My data.

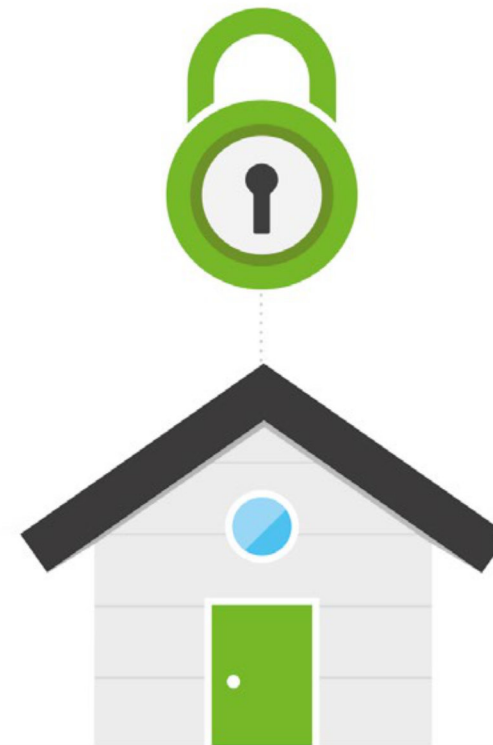

Privacy guaranteed.

Unlike some other smart home solutions, Loxone does not share your personal information with third parties. Loxone works completely independently of a central data Cloud. This means that data about you and your home, such as presence, temperature or alarm modes doesn't leave your home. We believe in the motto: "My Miniserver, my data."

Other providers

Mine, yours, their data

Loxone

My home, my data

Maximum Independence

Loxone is proof that intelligent control of your home is possible without the Cloud or an Internet connection.

My Miniserver.
My data.
My security.
My Smart Home.

If the Internet goes down, your home won't. The Miniserver looks after everything locally, including your lighting, heating and security.

Conclusion: With Loxone, you'll get maximum protection, data privacy and independence within your own four walls.

The highest IQ thanks to Miniserver technology

The Loxone Smart Home is the one with the highest IQ. We offer the products and software to intelligently automate every part of your smart home.

The Loxone Miniserver brings your home together. Think of your home as a central nervous system and the Miniserver as the brain. It combines all the components of your home into one central system and manages

the communication between them. A Loxone Smart Home adapts to suit your lifestyle. The system will take care of tasks before you've even thought about them. Whether your system is wired or wireless, or a combination of the two – the Miniserver anticipates your habits, wishes and needs to create an environment that is both comfortable and enjoyable. It continuously adapts to keep up with your lifestyle.
