

POSTER #19 – Sustaining an Efficient Toileting Process

Deanne Bond, Amie Wilker

Chartwell Westmount LTC Residence, Kitchener, Canada.

DESCRIPTION:

In the hectic days of Long Term care, increasing efficiency with daily tasks is paramount. Staff assist residents with their toileting needs multiple times daily. Ensuring resources, supplies and equipment is readily available when assisting with toileting can decrease the staff time spent on these tasks, allowing them extra time for assisting residents with other care needs and can improve the residents experience by having timely attention. At Chartwell Westmount LTC Residence a quality initiative was put into place to ensure efficiency in toileting and allowing us to return time to care.
