Customs Declaration System

Requirements

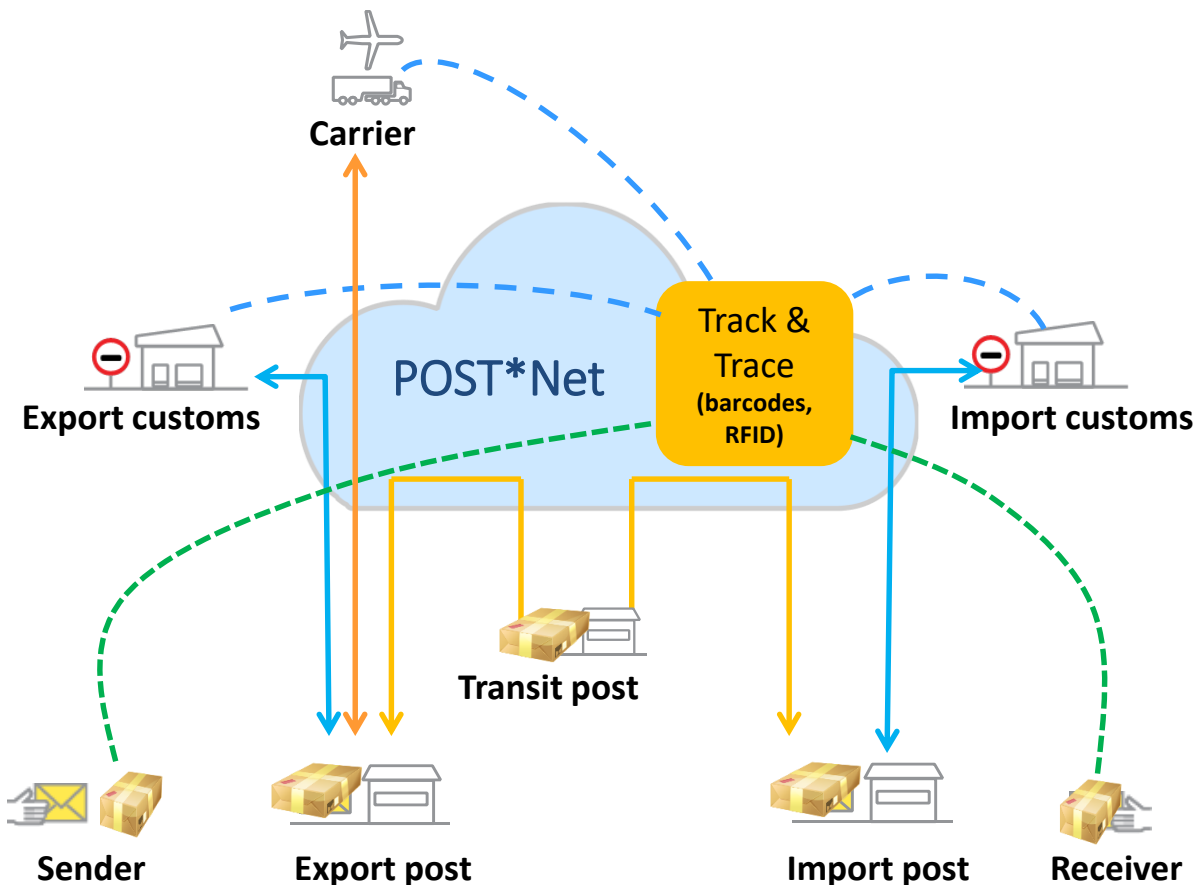

Why electronic pre-advice for postal items ?

- **Legal requirements and regulatory requirements**
 - US (Stop Act), China, EU (UCC, ICS-2), Russia
 - ITMATT mandatory from 2021
- **Security requirements**
 - Pre-advice to be sent before item leaves country of origin (PLACI)
 - Provide possibility for security alerts back to origin
- **Reduce / maintain customs processing time**
 - Customs decision making while item is on route
 - Possibility for « automated » Customs decisions for low-risk items
 - Postal volume increasing but not Customs staff
 - Direct inject possible from shippers/online shops

Channel: The UPU Electronic Message Network POST*Net

New in 2019: possibility to connect Airlines and Customs directly!

- Secured (VPN, SSL) Standard EDI network (POST*Net) operated by UPU, **Since 1996**
- 24*7 - 100% availability
- Business continuity
- Performant (0-5 min processing)
- Monitoring & alerting service
- Used by 170 postal operators
- Very affordable (cost-based)

Level of detail:	
	• Item, bag, dispatch consignment
	• Consignment
	• Item (declaration)
	• Item (query)
	• Item-receptacle-transport link (query)

Paperless Customs clearance using CDS

Objectives

- **Provide a standard out-of-the-box IT system**
 - To exchange electronic customs declaration data pre-advice
- **Implement interfaces**
 - Using the global WCO-UPU standards ITMATT, CUSITM, CUSRSP
 - Interfacing with UNCTAD's Asycuda World system
- **Link Customs Systems (or: Customs can use CDS directly when they don't have a system adapted to mail flows)**
- **Ensure affordable pricing**
 - Enabling all countries regardless of their development status
- **Create a multilateral/global solution**
 - Efficient Post/Customs cooperation for postal item clearance

Paperless Customs clearance using CDS

Benefits

- Reducing Handling times and increasing throughput
- Enabling risk management
- Making mail flows more efficient
- Improving communications between posts and customs
- Enhancing the customs clearance process
 - Up to 30% performance increase (reduction of end-to-end times measured on items sent to Canada and the USA).
- Providing a framework for security/other alerts
- Supporting integration with e-commerce systems

CDS – Customs Declaration System

Description

CDS is a web application divided in two independent modules

Post

- Capture of the customs declarations (CN23)
- Exchange of electronic customs declarations with other operators (ITMATT) and with the customs (CUSITM)
- Interface of mail management systems (IPS...)

Customs

- Exchange of decisions on electronic customs declarations with the posts (CUSRSP)
- Tax module
- Targeting module
- Interface with external systems (tax calculation, targeting...)

Export process:

CN23 customs declaration data capture workflow

Entry points

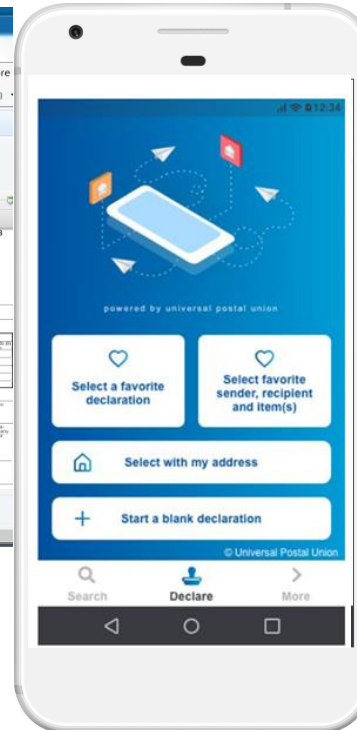

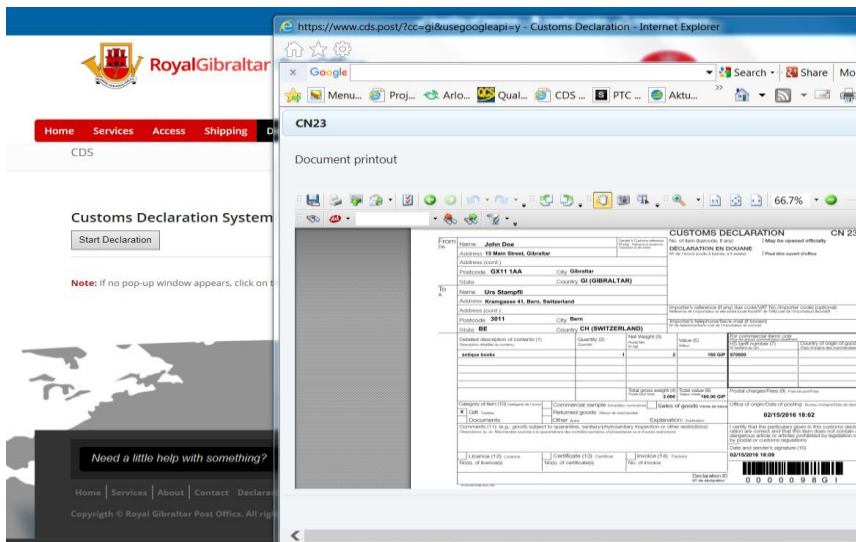

Export process:

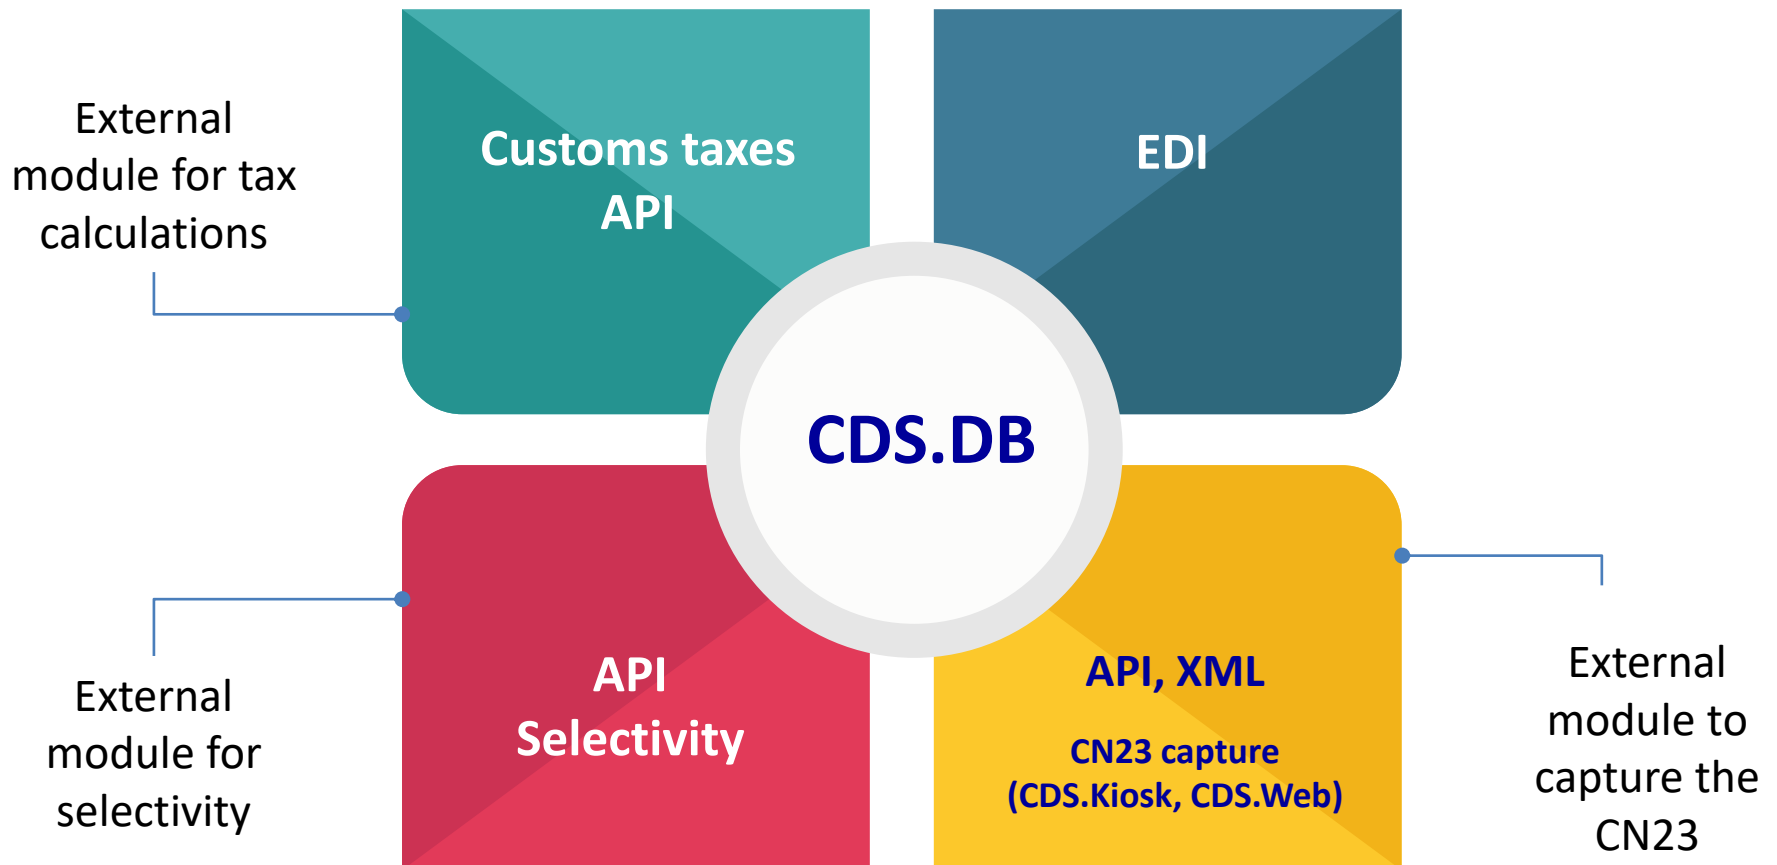

CN23 customs declaration data capture workflow

Technologies: Web, Kiosk and Mobile App

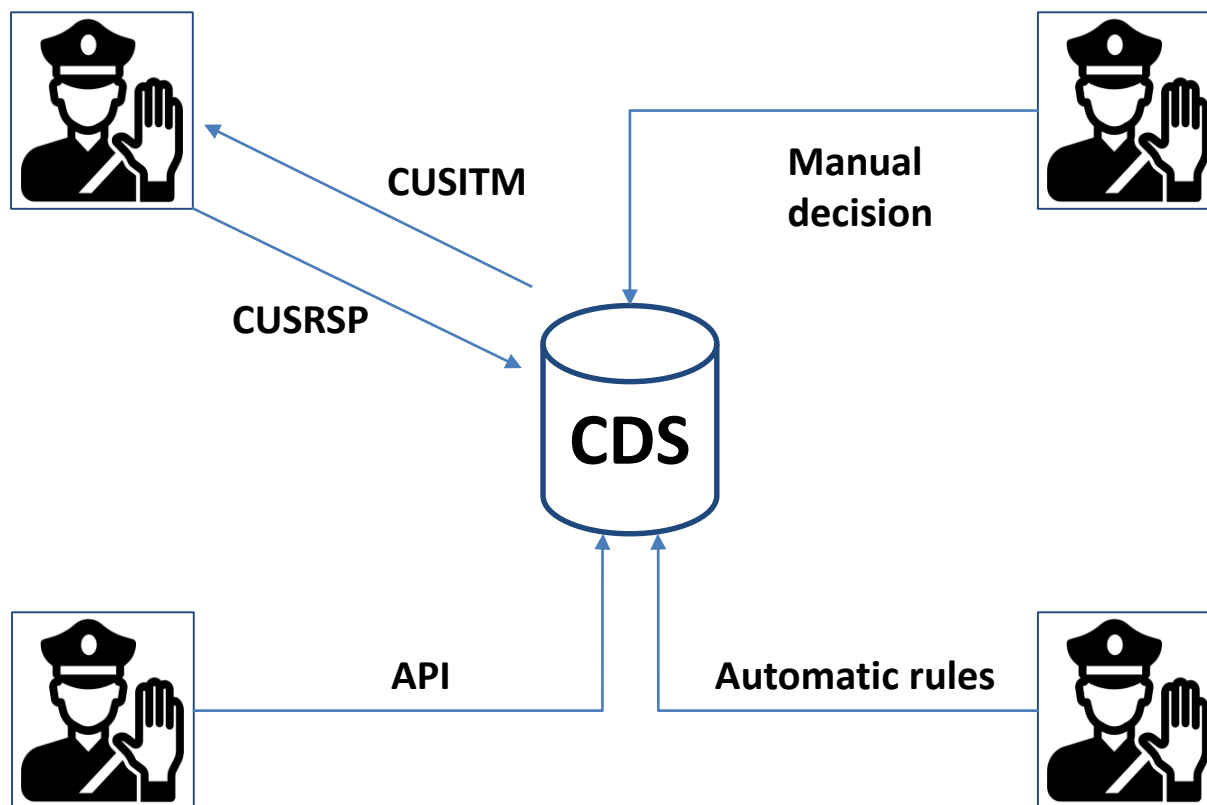

Modular approach

Import/Export: Customs decision

Options for customs decision in CDS:

Decisions can be made:

- **Directly in the system** (configure automatic rules, decision by Customs agent)
- **From another system** used by Customs and interfaced with EDI standard messages or API
- **Can be combined**, ex: CDS automatic rules for automatic clearance of small value goods, followed by manual decision for the rest

Import/Export: Customs decision

Rules to create auto response for outbound mail

A ☐ Recipient address contains (e.g. Ottawa, Toronto Brent, or use ? for all) .Use '&' for 'AND' logic

B ☐ Destination post is (e.g. AUA, NZA, FRA, or use ? for all)

C ☐ Mail class is (e.g. E, U, C, or use ? for all)

D ☐ Handling class is (e.g. N, V, R, or use ? for all)

E ☐ Weight [Kg] is greater than

F ☐ Value is greater than

G ☐ Weight [Kg] is smaller than

H ☐ Value is smaller than

I ☐ Item arrived at post

J ☐ Content pieces contain HS codes (e.g. 640411, 920314, or use ? for all)

K ☐ Number of content pieces is greater than

L ☐ Number of content pieces is smaller than

M ☐ Estimated total taxes are greater than

N ☐ Estimated total taxes are smaller than

O ☐ Mail category is (e.g. A, B, C, D or use ? for all)

P ☐ Sender address contains (e.g. Ottawa, Toronto Brent, or use ? for all) .Use '&' for 'AND' logic

Q ☐ Sender postcode contains (e.g. 91139, D1 H3 A5, or use ? for all)

R ☐ Recipient postcode contains (e.g. 91139, D1 H3 A5, or use ? for all)

Logical expression

Applies to a percentage of items of

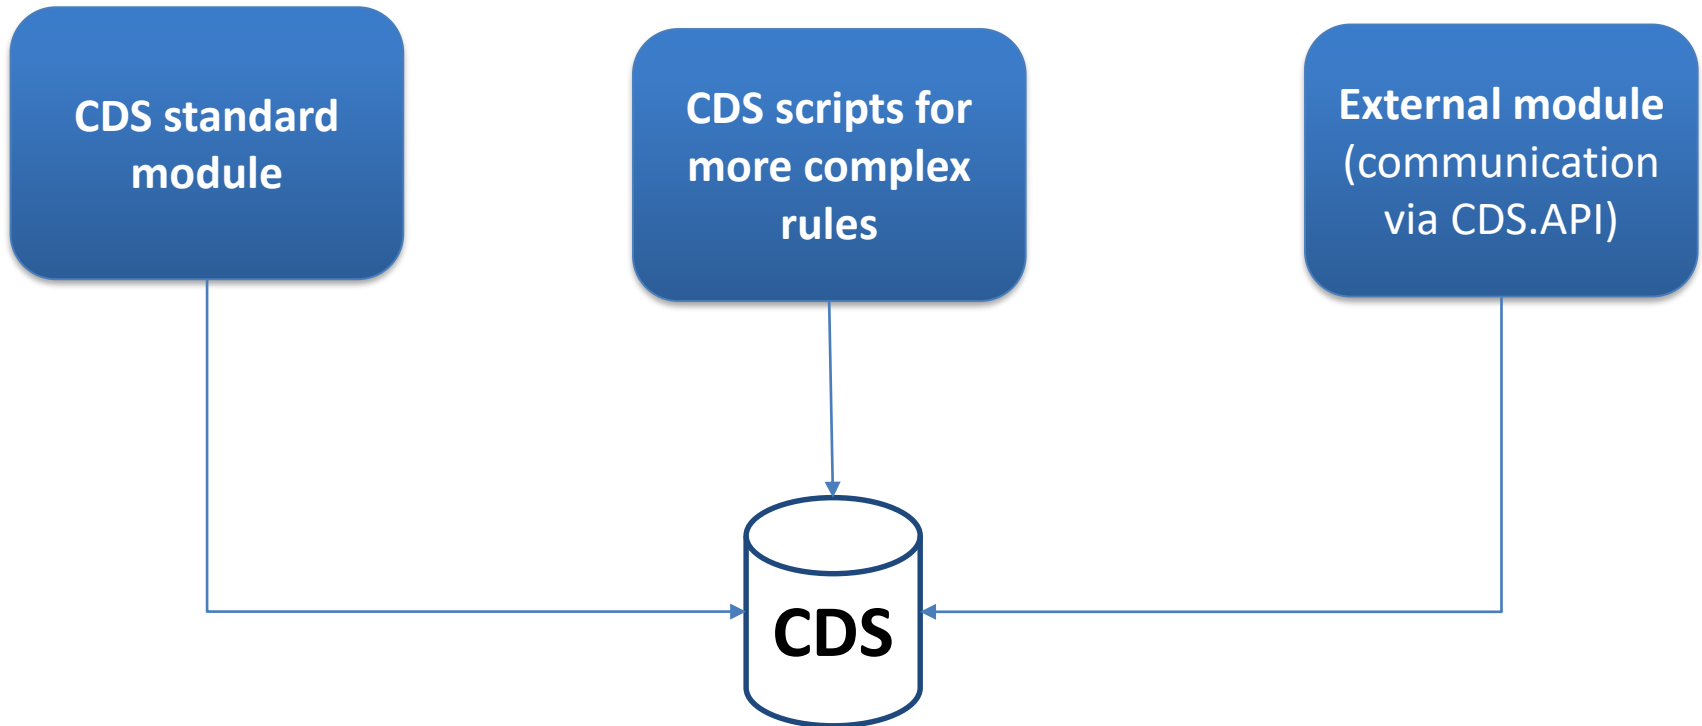

The auto responses rules can be used in addition to an external selectivity / targeting system

CDS

- Application hosted by the posts

CDS.POST

- Application hosted by the UPU in a shared environment with other posts

CDS Cloud

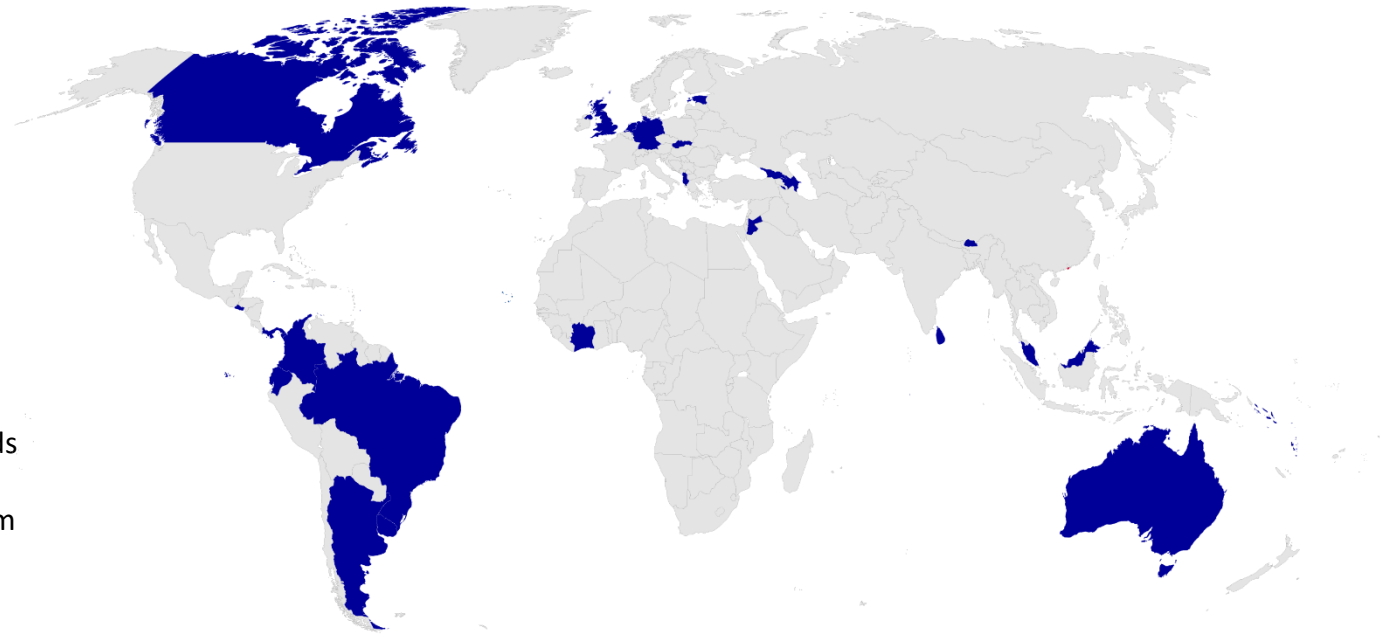

- Application hosted by the UPU in a dedicated environment
- SaaS

Implementation status

30 production users

Albania	El Salvador
Argentina	Estonia
Aruba	Georgia
Australia	Germany
Azerbaijan	Gibraltar
Barbados	Jordan
Bhutan	Malaysia
Brazil	Netherlands
British Indian Ocean Territory	Panama
Canada	Slovakia
Cayman Islands	Solomon Islands
Colombia	Sri Lanka
Côte d'Ivoire	United Kingdom
Curacao	Uruguay
Ecuador	Vanuatu

- Ongoing regional or local projects with 50 additional countries
- Including, when applicable, interfacing with Asycuda World for the 90+ Customs that are equipped

Next steps

- **Meet 2021 timelines** (USA STOP Act, EU ICS-2, China, Russia, ITMATT mandatory)
- **ASYCUDA World (AW) –CDS interface production rollout** (Uganda, Georgia, Vanuatu)
- **Further enhance export data capture** (mobile app)
- **Explore the feasibility of setting up Compliance hubs**
- **Regional expansion projects** (+50 countries involved)
- **WCO-UPU capacity building project to counter the transportation of dangerous contraband, including synthetic Opioids** (starting)
- **Prohibitions search tool** (developed)
