Duff and Macintosh (est 1928) are exclusive agents in Australia and New Zealand for Sentry Equipment Corporation (est 1924).

As suppliers of instrumentation since the 1928, Duff and Macintosh have specialised in the area of sample conditioning, for 40 years. Our range of supply has extended from stocked components to indented panels and complete systems.

We can supply anything from simple components to containerised laboratories.

Sentry manufacture a wide range of water chemistry sampling products:

- Sample coolers
- Pressure reducers
- Back Pressure Regulators
- Sample Sequencers
- Cooling Water Chillers
- Cooling Water Isolation Skids
- Steam / Water sampling systems

Sentry pre-engineer single line sample panels and even complete wet-racks to the latest EPRI and ASTM guidelines for power stations world-wide. Sentry's equipment, though competitive, is built to the highest standard, thus ensuring your chemistry's quality and your plant's longevity. Sentry's complete range of Power Station Chemistry equipment ranges from simple components to the most complex of systems.

Duff and Macintosh stock a large range of components in Sydney, with frequent deliveries from Sentry ensure lead times are kept to a minimum.

If there is any more information you require, or assistance with applications, please call by our booth during the conference. Of course, we will look forward to receiving enquiries in the future.

For further information please don't hesitate to contact me
