Fire And Safety Plan

Please Print and Sign

When a Fire Occurs:

1. Remove patients from danger.
2. Activate nearest fire alarm.
3. Call operator at extension 3333; identify yourself and indicate the type of fire.
4. Close all doors and windows in the immediate area.
5. Fight fire with an extinguisher.
6. DO NOT use the elevators.

The Disaster Plan (Internal and External) as well as the Infection Control and Safety Manuals are at each unit or working area in the hospital for your review. Fire extinguisher and exit locations will be reviewed with your program director for each department.

There are Material Safety Data Sheets available in the units regarding the hazardous materials in that area. Please ensure that you are familiar with this information.
