Biography

Glenn Griffin is Director, Supply Chain (Generation) for Entergy. He has responsibility for Supply Chain operations and tactical procurement for Entergy’s Nuclear and Fossil units. Glenn has worked in the electric utility industry for over 30 years. He is a Mississippi State alumni and a graduate of Belhaven University.

Abstract – What takes the Place of Lost Generation

In recent years there have been several announced and actual permanent shutdowns of nuclear and coal plants in the US. This session will cover some of the factors leading to those shutdowns and will focus on what the future holds. Continuing innovations in the natural gas industry have resulted in unforeseen availability of natural gas and sharply declining gas prices. Many utilities are finding the decision to expand their portfolio of gas fueled plants an easy decision. During this session we will also take a look at the growth of Combined Cycle Gas Turbines in the US.
