In 2001, John moved into a corporate role holding positions in Supply Analytics, Decision Support, and most recently, Manager of Inventory and Investment Recovery.

Abstract - Methods for Improving Material Reservation Accuracy

This discussion will highlight the efforts Exelon has taken to improve the accuracy of material reservation accuracy and their effectiveness in reducing surplus inventory growth. Surplus inventory growth as a result of excess material demands is a problem that plagues virtually all generating facilities. Finding ways to better understand future material needs in order to reduce contingency purchases while still maintaining high plant availability is a major challenge.
