**“Exelon's Catalog Consolidation”**

---

**Dave Mueller**

VP, Strategic Programs  
Paragon Energy Solutions  
704.595.2609  
[DMueller@ParagonES.com](mailto:DMueller@ParagonES.com)

---

**Biography**

David Mueller has 37 years in the Power Industry. Starting out in nuclear plant construction while with Sargent & Lundy Engineers, Dave worked on the Marble Hill, Zimmer, Byron, Braidwood, LaSalle and Clinton stations. In 1989, Dave transitioned to the Supply world which included 19 years at Exelon in which he served as Site Supply Manager at Braidwood station, where he helped complete two 15 day refuel outages and as Corporate Supply Operations Manager, where he provided governance and oversight to the Exelon nuclear supply organizations, specifically in the area of refuel outage efficiency and equipment reliability. Currently David is Vice President, Strategic Programs, at Paragon Energy Solutions. Dave’s responsibilities at Paragon are to provide his expertise and oversight on Paragon’s various expanding business, which includes commercial grade dedication, repair, sourcing, warehousing, reverse engineering, and qualification.

**John Gallaher**

BSC Supply Inventory Management  
Exelon Corporation  
267.533.1134  
[John.gallaher@exeloncorp.com](mailto:John.gallaher@exeloncorp.com)

---

**Biography**

John Gallaher has 34 years of experience in the power generation industry. John spend the first 17 years of his career at Peach Bottom Atomic Power Station holding positions in I&C Engineering, Fire Protection, Licensing, Contract Management and Project Management. In 2001, John moved into a corporate role holding positions in Supply Analytics, Decision Support, and most recently, Manager of Inventory and Investment Recovery. Includes commercial grade dedication, repair, sourcing, warehousing, reverse engineering, and qualification.

**Abstract**

As a result of many decades of operation, multiple inventory systems change outs, and fleet growth, Exelon’s Inventory Catalog had become burdened with many thousands of duplicate inventory items with multiple Catalog IDs. The lack of common Catalog ID’s

was adding to unnecessary stocking levels, increased complexity in transferring materials between sites, and a lack of visibility to total inventory usage. Exelon decided that the time was finally right to embark on an Inventory Catalog Consolidation Project. This presentation will highlight the process used in this consolidation project, the benefits, and the lessons learned.
