

# Dell FluidFS and Fluid Cache

# Dell Fluid File System

## Scale-out unified storage designed for future growth

- Non-disruptive capacity and performance scale-out without forklift upgrades
- Linear file OPS and throughput scalability
- No architectural limitations of traditional NAS or file servers
- Single scalable namespace up to 4PB for easy administration
- Shared infrastructure for block and file enables highest efficiencies and cost savings
- Optimized data placement on high performance SSDs and HDDs
- Policy-driven post-process dedupe and compression

# Delivers enterprise resiliency and data protection

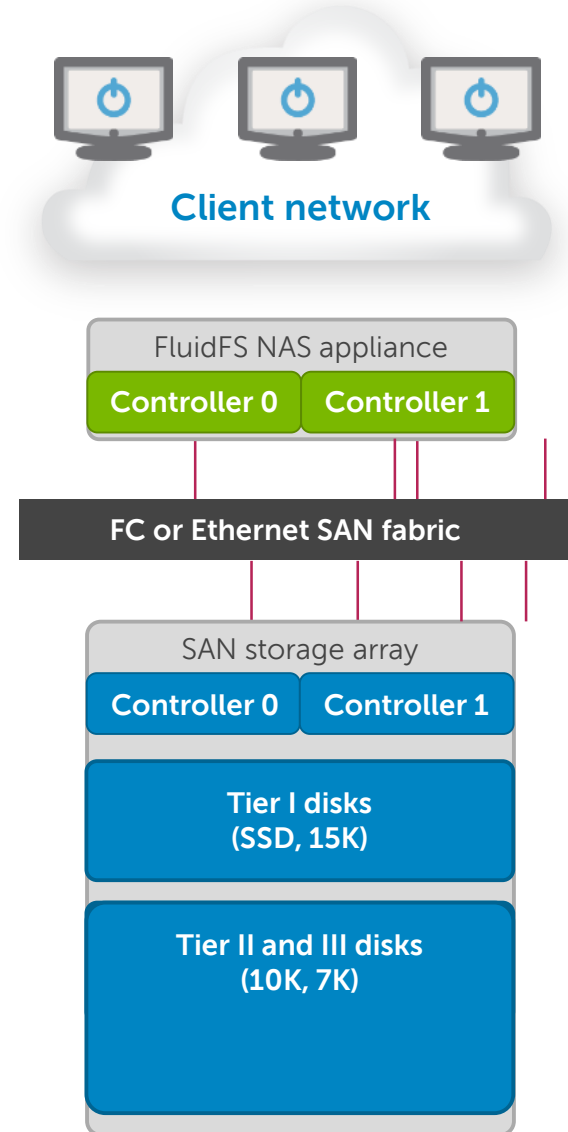

- Two active-active controllers per appliance deliver **high availability** without introducing idle resources
- Midplane between controller pairs with 40Gb bandwidth enables **cache mirroring** and write-back operations
- Battery backup and redundant copies of critical file system structures protect metadata to **maintain data integrity**
- Internal hard drive for local boot with flash for **configuration backup**
- Native support for NDMP and ICAP antivirus **protects business-critical data**

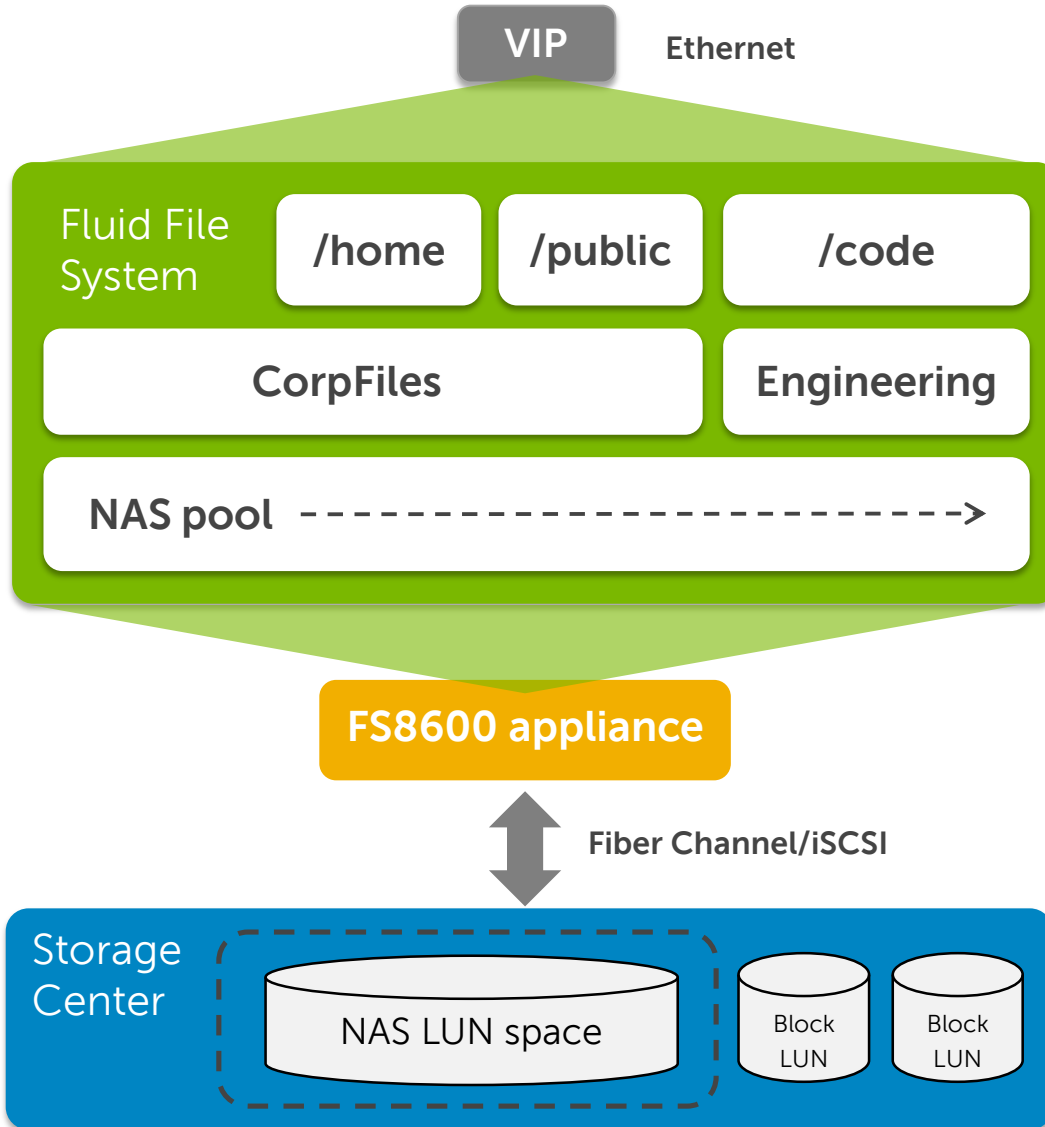

# FluidFS offers best-in-class performance and scalability

- Achieve linear performance scaling with low CAPEX.
- Only purchase the performance and capacity you need today.
- Add controllers and disks non-disruptively to accommodate block and/or file growth.
- Keep your busiest data on high-performance storage; move stagnant data to dense, low-cost storage.
- Scale to 4PB in a single namespace, whether you have a single appliance or four.

# FluidFS offers flexibility without sacrificing simplicity

Virtual IP space for client access to entire namespace

Directory structure for shares and exports

Logical volumes to manage files

Single pool spans FluidFS cluster

Scales from 1 to 4 appliances

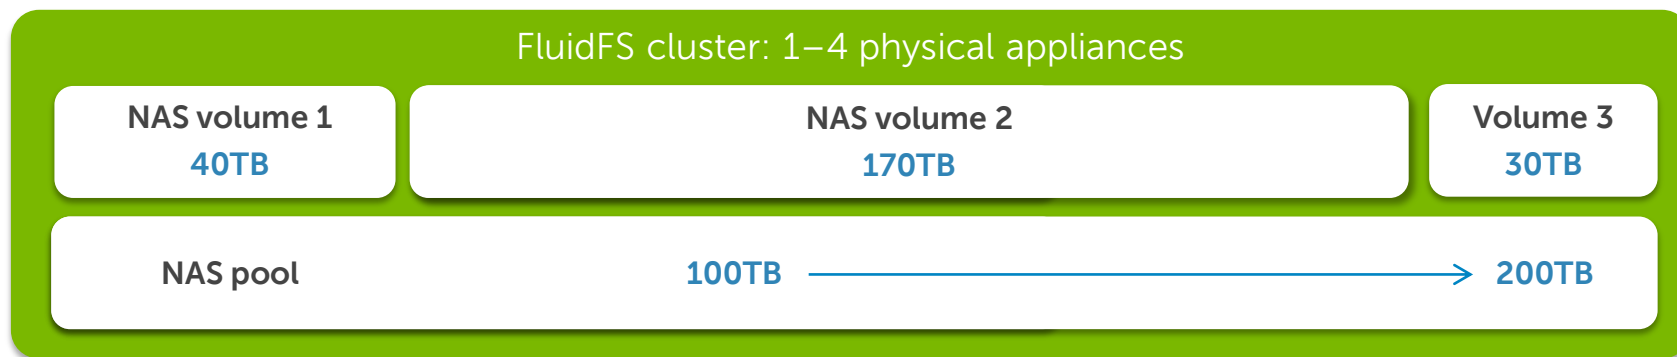

Block space carved transparently

# FluidFS feature set

# NAS volume thin provisioning: increases flexibility

## How it works

- Administrator provisions more “advertised” space than the actual size of the NAS pool

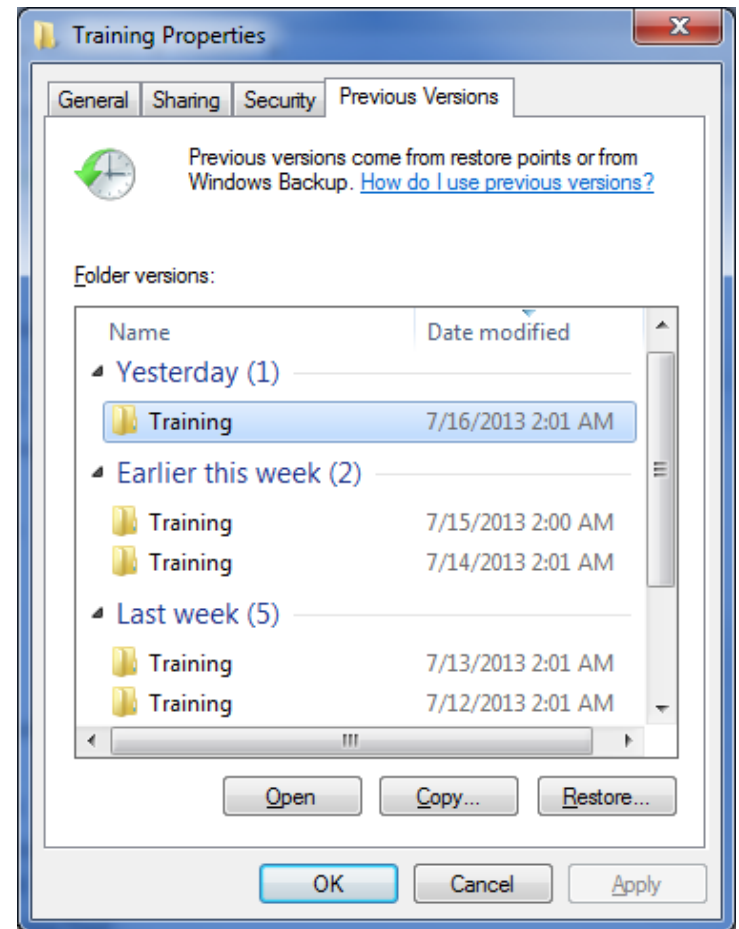

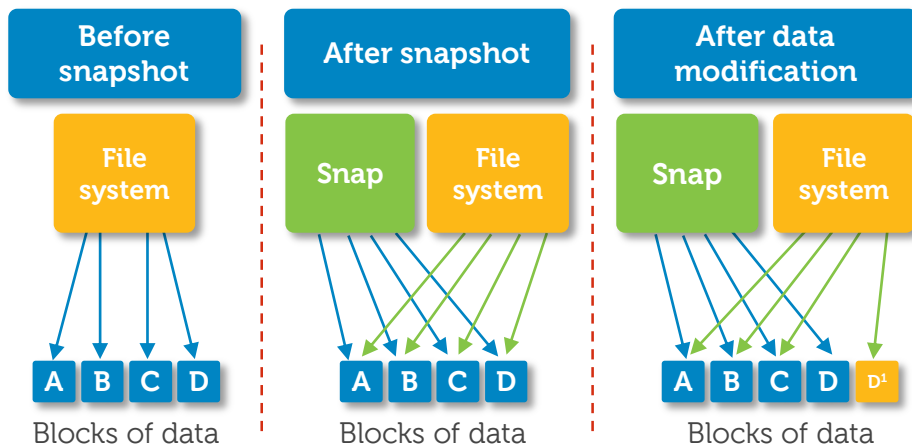

## Benefits

- Gives the end user or application the flexibility grow NAS volumes unencumbered by the physical capacity of the NAS pool
- Notifies the administrator when the consumed space in the pool reaches user defined watermarks

# File-level snapshots: improves the data protection process

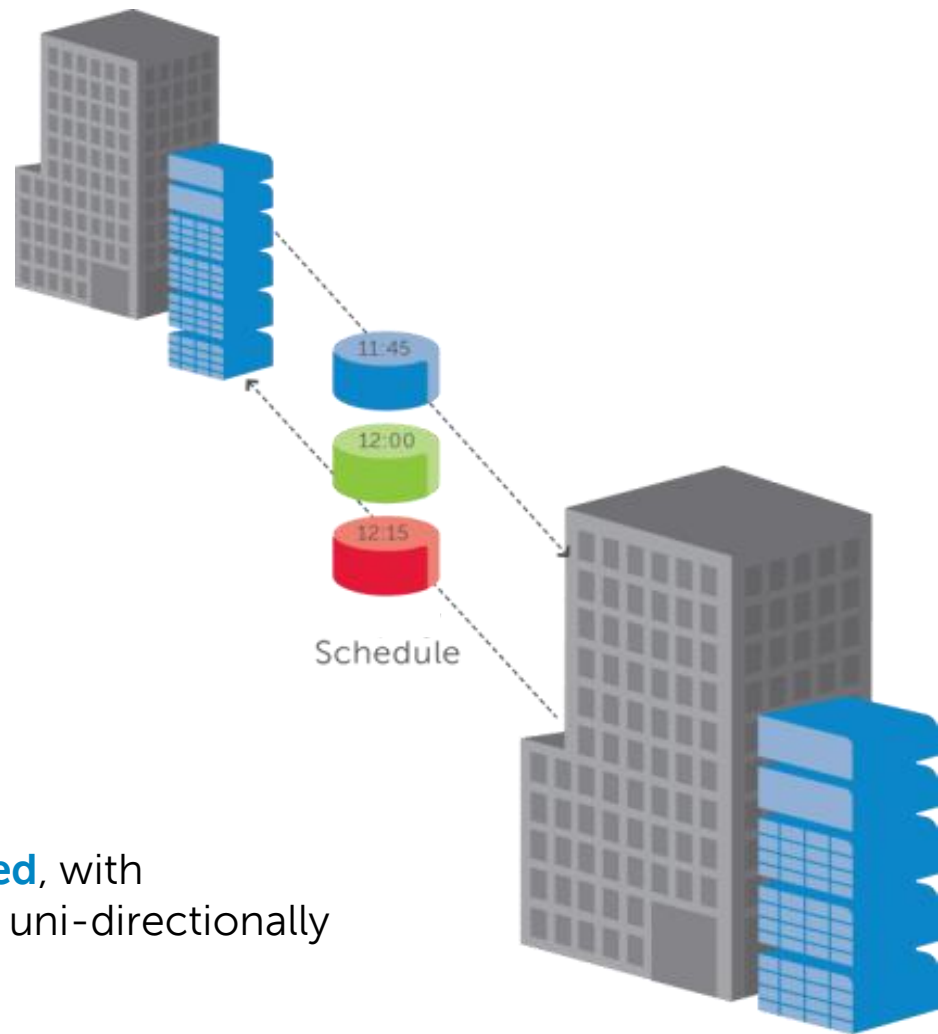

- Pointer-based file data protection applied per NAS volume; **no snap reserve**
- **Redirect-on-write** snapshots prevents performance degradation; one I/O per write
- Provides **user-level access to snap history**; lets users recover their own files

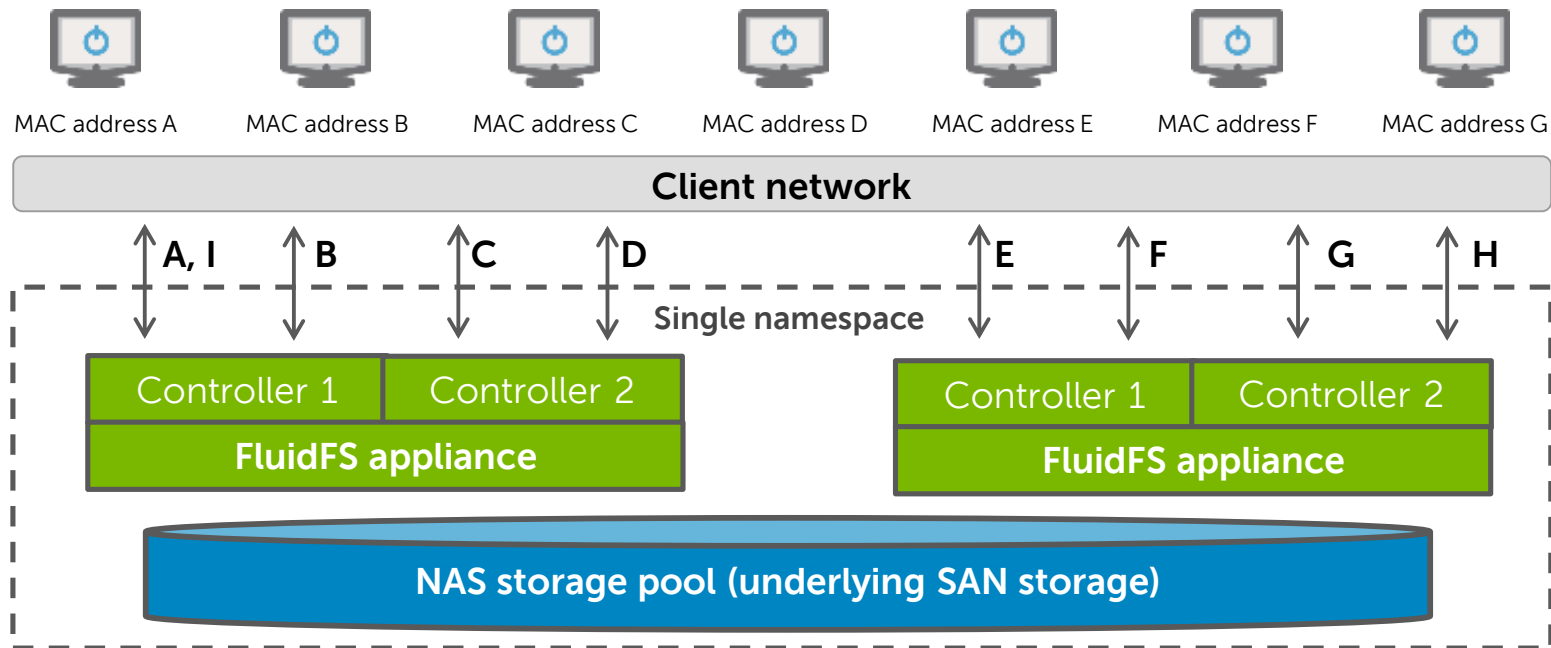

# File-level replication: shares snapshots between peer sites

- **Snapshots replicated** to FS8600 systems with the same number of controllers
- Replication is **policy-driven** and can be scheduled per NAS volume
- Only incremental changes are replicated, **saving bandwidth**
- **Bidirectional replication supported**, with individual NAS volumes replicated uni-directionally

# Load balancing: optimizes performance

- Incoming connections are **automatically balanced** across client ports and across all FS8600 controllers in the cluster
- **Single namespace** means file data does not need to be sharded or siloed into individual file sets as additional FS8600 appliances are added

# Fluid Data Reduction

FluidFS Data Reduction is composed of:

- Data DeDuplication
  - Data Compression
- Data Reduction is applied per NAS Volume and once Dedup is enabled the administrator can enable/disable the compression component.
  - Minimum file size to be considered for data reduction is 64KB

## OBJECTIVE

Maximize capacity usage while increasing return on investment.

# FluidFS uses differentiated approach to dedupe

## Sliding window, variable block dedupe

- Advanced algorithms to determine chunk size based on data patterns
- Dedupe engine crawls file, looks for 128KB +/- 64KB chunks

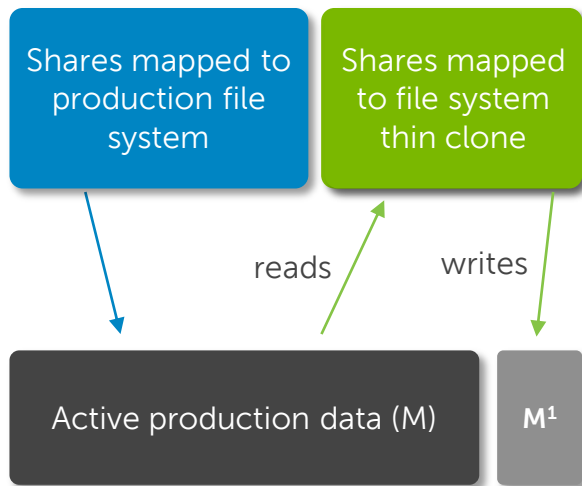

- Results in better deduplication ratios than SIS or fixed-block dedupe
- Good for unstructured data environments

# Thin volume cloning: efficient application and DR testing

## How it works

- Take a snapshot of a volume or file system
- Create a separate file system metadata structure, presenting a virtual copy of the file system to users by mapping new shares/exports
- Write to the clone via the new shares/exports captured separately

## Benefits

- No space is consumed until data is modified (aka "thin clone")
- Enables code and workflow testing against non-production data sets for applications and DR procedures

# Manage entire platform through a single interface

- Configure, deploy and manage from a single interface
- Phone Home proactively monitors entire storage ecosystem
- More robust reporting for file activities

The screenshot displays the Dell Enterprise Manager Client interface. The top navigation bar includes 'Storage (SAN/NAS)', 'Summary', 'Details', 'File System', 'Storage Center', 'Performance', and 'Events'. The main content area shows a tree view on the left with 'Dell Compellent' expanded to 'Storage Centers' and 'FluidFS Clusters'. The central pane shows a 'files' share with a progress bar for 'Allocated Space' (500 GB) and 'Used Space' (23.26 GB, 4.66%). Below this is a table of CIFS Shares:

Share Name	Allow Guests	Anti-Virus	Locking	Anti-Virus Policy	Anti-Virus Extensions Policy	Path
scratch	No	No	All Locks	Do Nothing	Exclude	/scratch
stuff	No	No	All Locks	Do Nothing	Exclude	/stuff
test	No	No	All Locks	Do Nothing	Exclude	/tests

The screenshot displays the 'Events' tab in the Dell Enterprise Manager Client. The table below shows a list of events with columns for 'Last Occurrence', 'Type', 'Severity', 'Instance Name', 'Message', and 'First Occurrence'.

Last Occurrence	Type	Severity	Instance Name	Message	First Occurrence

# FS8600 current tested/validated values

Max values	Single appliance (2 controllers)	4 appliances (8 controllers)
Max system size	4PB	4PB
Max file size	10TB	10TB
Max number of files	64 billion	128 billion
Max file name length	255 bytes	255 bytes
Max number of directories	34 billion	68 billion
Max directory depth	512	512
Max NAS volumes	256	1,024
Max snapshots per volume	512	512
Max snapshots per cluster	10,000	10,000
Max replication policies	100	100
Max NFS exports	1,024	1,024
Max CIFS shares	1,024	1,024
Max quota rules (user quotas)	100,000	100,000
Max quota rules per volume	512	512

# Growing list of third-party certifications

## ICAP Antivirus

- Symantec ScanEngine 5.2
- Symantec Protection Engine for Cloud
- McAfee Virus Scan Enterprise and Enterprise for Storage
- Sophos Endpoint Security and Control
- Trend Micro InterScan Web Security Suite

## Other certifications

- Mezeo – secure file sharing solution
- Ippany – cloud storage solution
- Merge, Agfa, McKesson – medical

## NDMP Backup

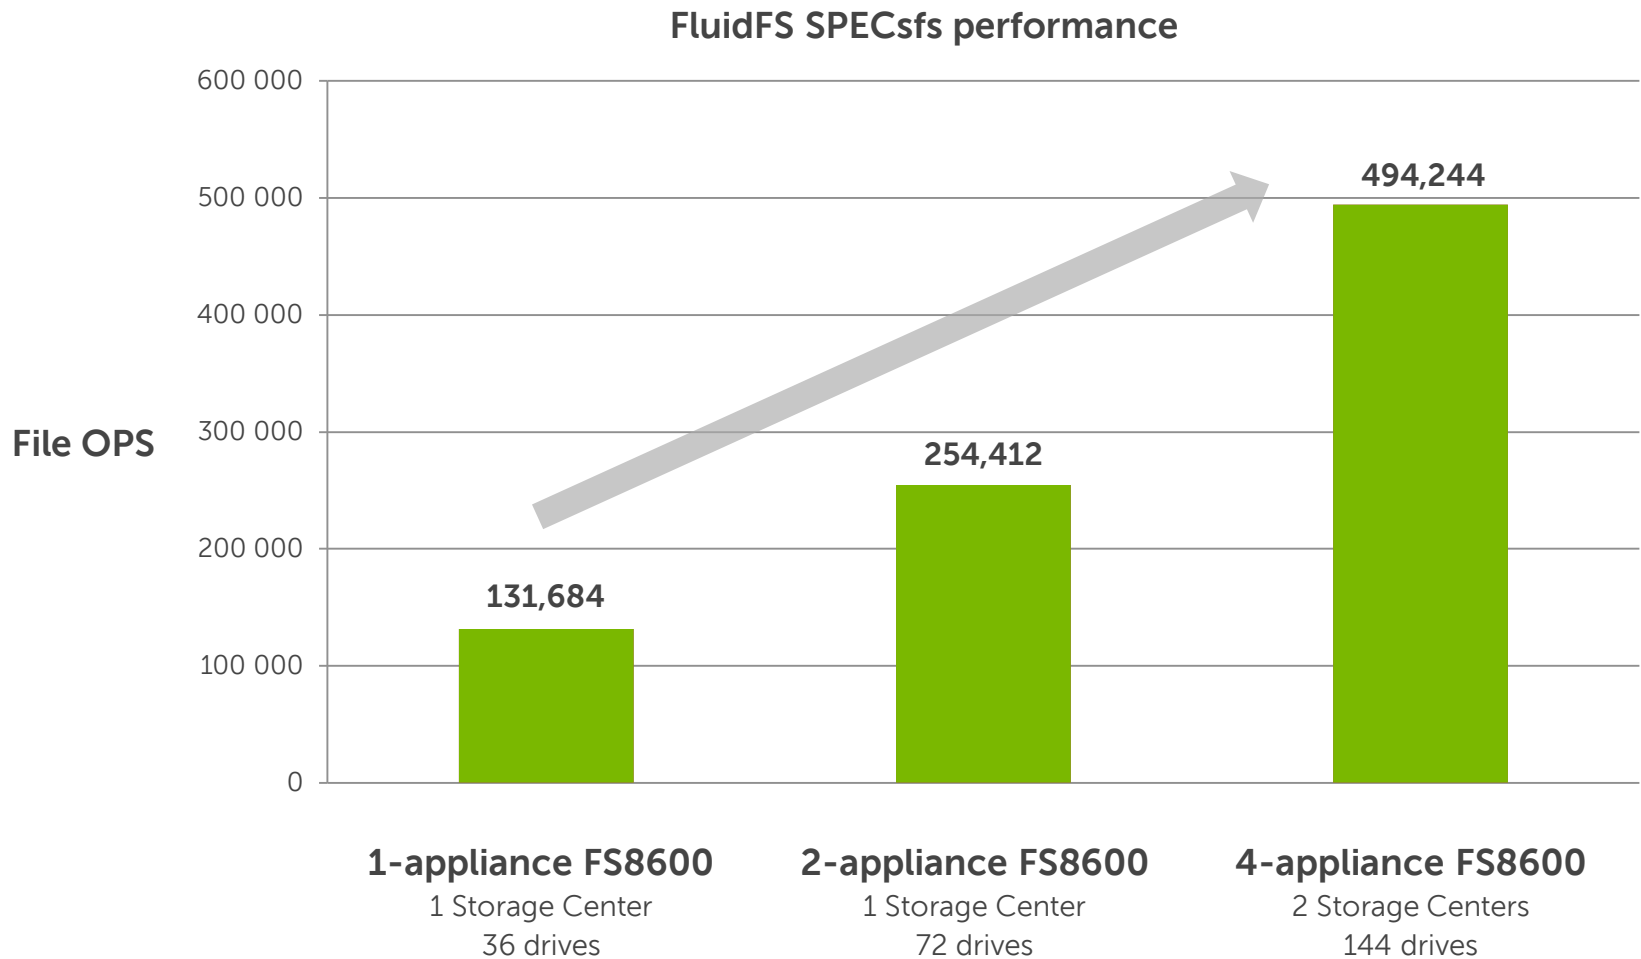

- Quest NetVault Backup 9
- CommVault Simpana 9.x
- Symantec NetBackup 7.x
- Symantec Backup Exec 2010R3 & 2012
- Tivoli Storage Manager 6.3
- CommVault Simpana 10.x
- EMC Networker
- HP Data Protector
- ARCserve

# FS8600 demonstrates linear throughput scalability

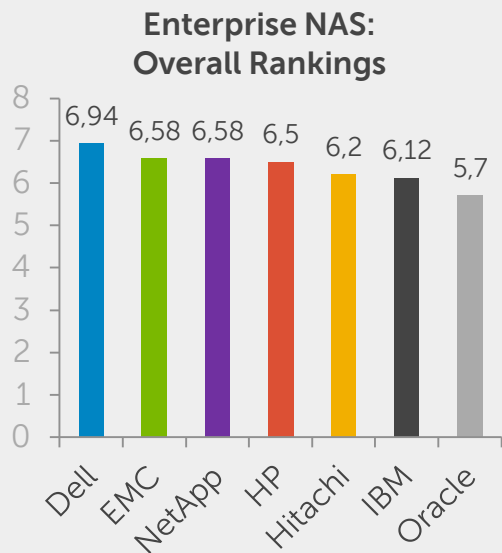

# 2014 Storage Magazine NAS Quality Awards

**Dell rated #1 enterprise NAS:  
Users give FluidFS top honors  
in all five categories.**

- **#1** initial product quality
- **#1** product features
- **#1** product reliability
- **#1** tech support
- **91%** of customers would buy again

**2<sup>nd</sup> highest  
overall enterprise  
NAS rating ever.**

**“Dell cruised  
through the  
enterprise group.”**

# SC Series

## System Center 6.5 Overview

### Fluid Cache for SAN

- Extend industry leading auto-tiering to servers
- Dramatic reduction in latency though high speed PCI cache in server

### Compression

- Ocarina compression algorithms reduces system impact
- Post processing of Tier 3 data provides deep data archives
- Enables more snapshots

### Synch Live Volume with Failover

- Support for synchronous, as well as asynchronous Live Volume
- Sub 5 minute RTO & zero RPO
- Supports manual failover

### Encryption

- Data at rest encryption using Self-Encrypting FIPS Drives
- Secure erase capabilities by array or drive
- Meets FIPS 140-2 certification

### 100% Greater Capacity

- Up to 3.1PB raw, 2PB Addressable

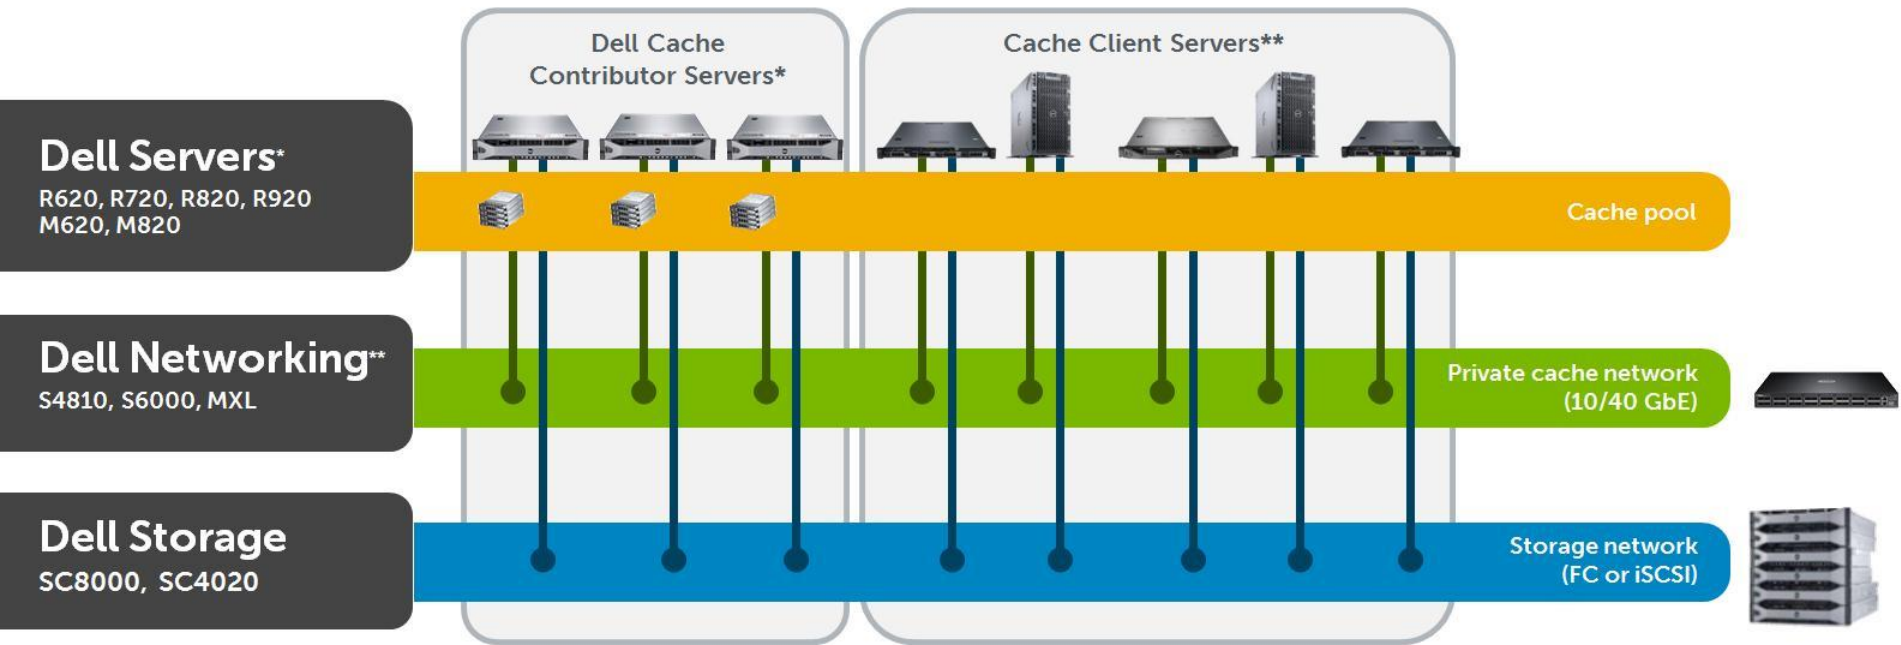

### VLAN Multi-Tagging

- Offers data & security separation between network traffic
- More flexibility via individualized quality of service across VLANs

# SC Series

Fluid Cache for SAN Bring data closer to compute...

**71%** Less cost per user

**99%** database response time improvement

Over **5 million** IOPS!

\*works with non Dell servers

\*\* Includes support for Nexus 5548UP

minimum of 3 validated Dell servers are required to establish the cache pool. a client servers can be a mix of Dell and other servers that run a supported have an available PCIe slot.

The power to do more
