

POSTER #14 - Pro-Active Lighting Management

Thomas Christiansen

Neolumens, Burlington, Ontario, Canada.

DESCRIPTION:

Using a highly targeted process to evaluate existing lighting is a crucial component to developing and implementing a lighting upgrade program that guarantees a facility will meet or exceed MOH<C standards while also delivering a payback in 2 years or less. This is particularly true in the current environment where many, if not all, Long Term Care operators are working to put together their renewal strategy. It is our belief that a properly designed lighting upgrade program can be implemented, with operational and financial success, even in buildings slated for renewal in a short timeframe.
