**Biography**

Mike Barnes is the Material Control Supervisor at Wolf Creek Nuclear Generating Station. He has 38 years of Supply Chain experience in Material Control, Inventory Management and Warehousing. Mike has been heavily involved with RAPID, the yearly conferences and multiple inter-utility initiatives and projects since the 1990's.

**Abstract – Work Management Influence on Supply Chain**

Most nuclear sites can attest to Supply Chain's involvement with work management, both daily and outage has drastically increased and become more formalized in the last several cycles due to utility initiatives set in motion to comply with AP-928 Work Management and focus on the Daily "T" schedules. Do you have a Supply Chain Performance Indicator for On Line Schedule Adherence? At what T-Week is your schedule considered frozen? Are you aggressive at leaving work scheduled inside the schedule freeze week? Are you even able to influence that decision? Have the demands on your division changed or increased during recent outages? These questions and many more abound on this topic. This session will be an open discussion. If you have the answers to these questions, come prepared to discuss your process, your successes or share your Performance Indicators. If you don't have the answer to these questions, then this session will be the perfect benchmarking opportunity.
