Biography

Dave Palmer has over 20 years of experience in the Nuclear Power Utility Industry in various positions related to plant design and configuration, spare parts/component evaluation, performance of safety classification determinations; Work Management – Scheduling, Operations and Vendor Technical Document Maintenance; with more than 12 years in Supervision. He currently holds the position as the Purchasing and Material Coordination Supervisor.

Abstract – Cycle Counting/RFID

This session will discuss the advantages and efficiencies in being able to more effectively utilize and reallocate warehouse resources to support more short term priorities while improving the ability in tracking actual location and inventory counts of material.
