ANALYTICAL INSTRUMENTS

SWAN Analytical Australia Pacific has been formed to streamline the distribution of SWAN Instruments from Switzerland. Though the company is new, the people who will serve you are not.

The team comprises Chris Wellard, who brings great experience with SWAN instruments from his past position as SWAN product specialist for the Osmoflo/WE + group, and Natasha Agafonoff, who brings her experience from the field of power station chemistry.

We look forward to introducing ourselves to you in person as the occasion arises and provide solutions through Swan's extensive range of instrumentation. We are also able to offer, in conjunction with Duff & Macintosh, Sentry Equipment: Sample Conditioning components, complete panels and arrays and Temperature Control Units (TCU).

We would like to extend our sincere thanks to all our loyal SWAN customers and look forward to fulfilling your future instrumentation needs. Our team in Australia is ready to go and at your service for any product enquiry or technical support issue.
