

WORKPLACE VIOLENCE

Best Practices for Prevention and Resilience

September 25, 2018

Pre-conference course at the 2018 Washington State Governor's Industrial Safety and Health Conference

COURSE DESCRIPTION

Estimates indicate that professionals working in healthcare and social assistance services experience workplace violence-related injuries resulting in days away from work at a rate four times higher than that of other private sector workers.¹

This course will cover an overview of the risk factors associated with workplace violence, new research on the psychosocial impact to workers, strategies for building resilience and the effectiveness of interventions used to date to prevent such violence. Participants will be able to demonstrate an ability to identify the risk factors associated with workplace violence, obtain support through employer/ supervisor resources and build their own resilience with stress reducing and coping strategies.

75% of all workplace assaults occurred in health care settings between 2011-2013.¹

COURSE INFORMATION

September 25, 2018

8:30am - 5:00pm

Spokane Convention Center

334 W Spokane Falls Blvd,
Spokane, WA 99201

21% of Registered Nurses and Nursing Students reported being physically assaulted during a 12-month period in a 2014 survey.¹

WHO SHOULD ATTEND

This course is intended for those working in social assistance services, psychiatric facilities, hospital emergency departments, community mental health clinics, treatment clinics for substance abuse disorders, pharmacies, community-care facilities, residential facilities, home health care, long-term care facilities, and those working in maintenance or security roles in a health care facility.

WHAT IS WORKPLACE VIOLENCE?

Incidents of workplace violence have more than tripled since the 1970's. Many factors have contributed to this increase including restructuring of work organizations, work environment characteristics, lack of training, and increase access to guns, illegal drugs and other risk factors. Trends in Washington state show that key barriers to violence prevention are insufficient staffing, inadequate violence prevention training, and sporadic management attention to the issue.²

This course is offered in collaboration with Rutgers University Center for Public Health Workforce Development and New York / New Jersey Education and Research Center
