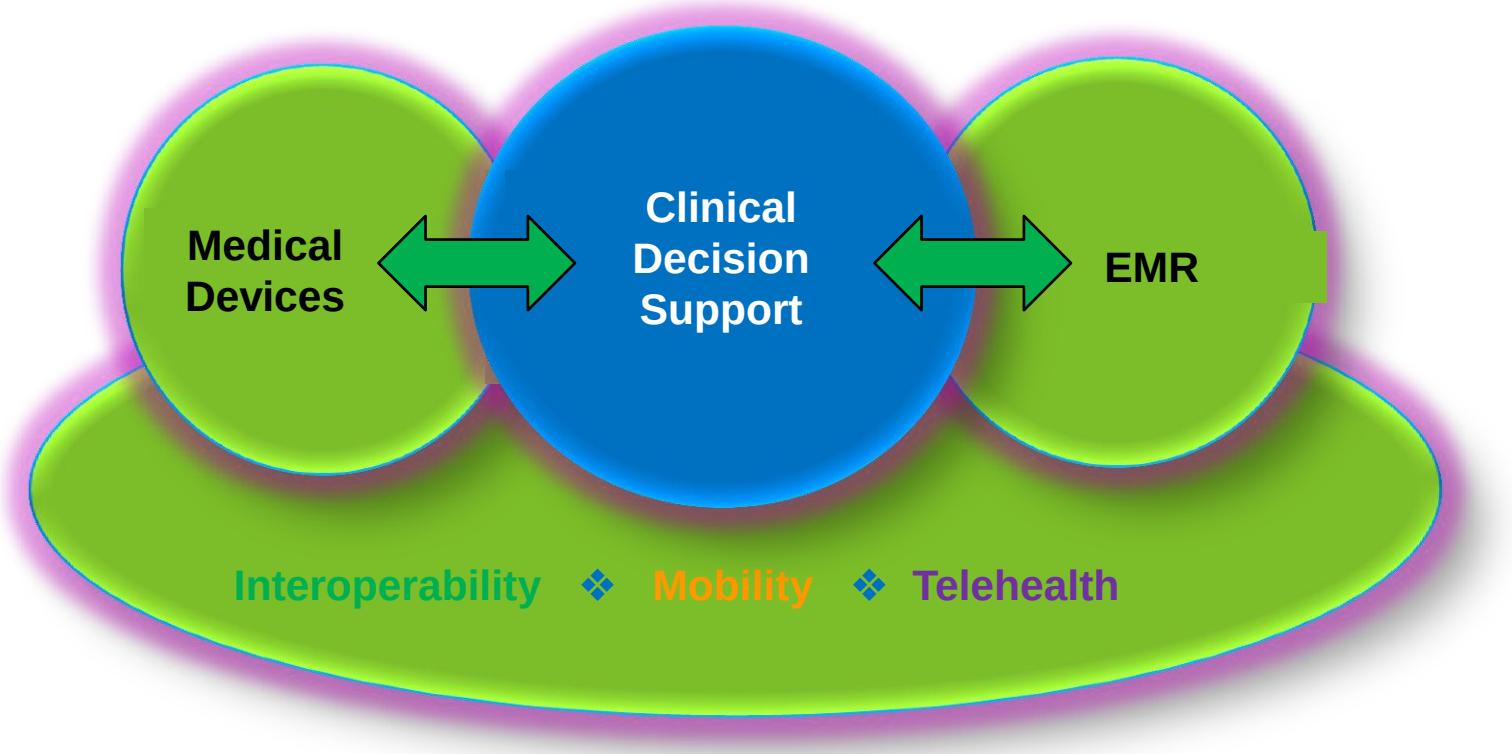
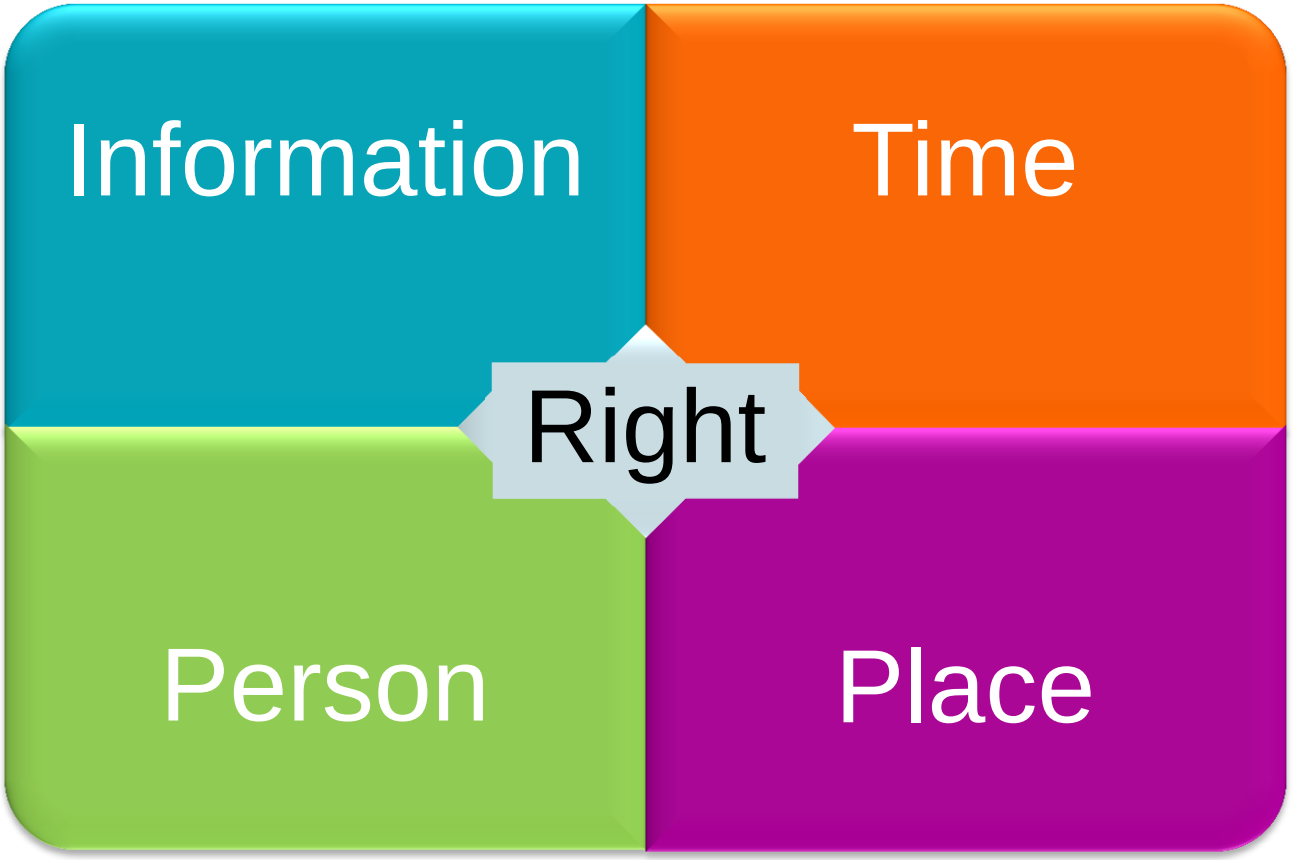
Solutions that touch patients and transform care

Philips IntelliSpace Clinical Informatics

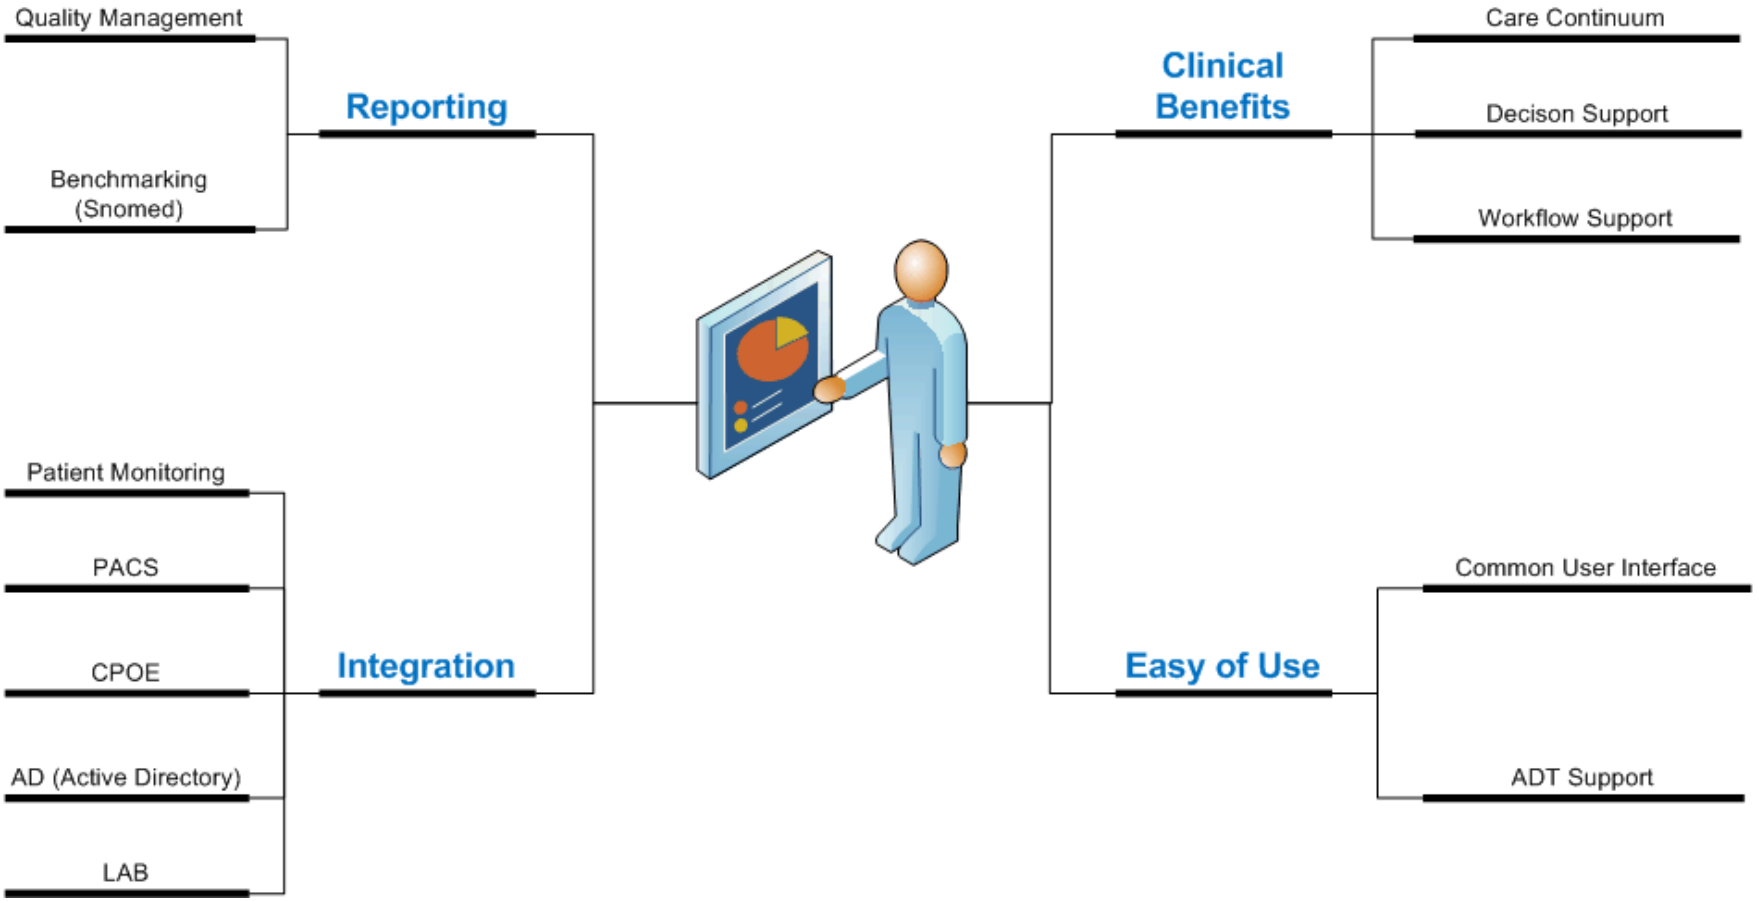
Simplify clinician workflow ❖ Improve financial outcomes ❖ Help improve and save lives



Clinical Informatics – Getting it Right



Challenges at the Point of Care



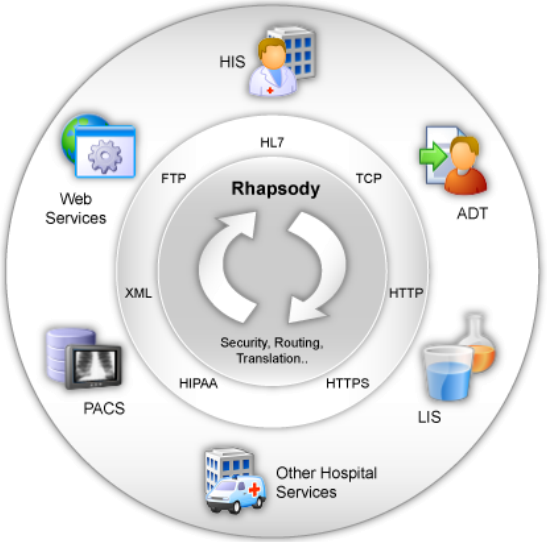
Enterprise Integration

- Active Directory Domain Integration

- Blood Gas Analyzer
- Laboratory System
- Microbiology system

- Hospital Information Systems / Electronic Medical Record Systems
  - ADT bi-directional
  - Patient Data Import
  - Document Export

- Computerized Physician Order Entry
  - Medications management



Scores

Quality management and control

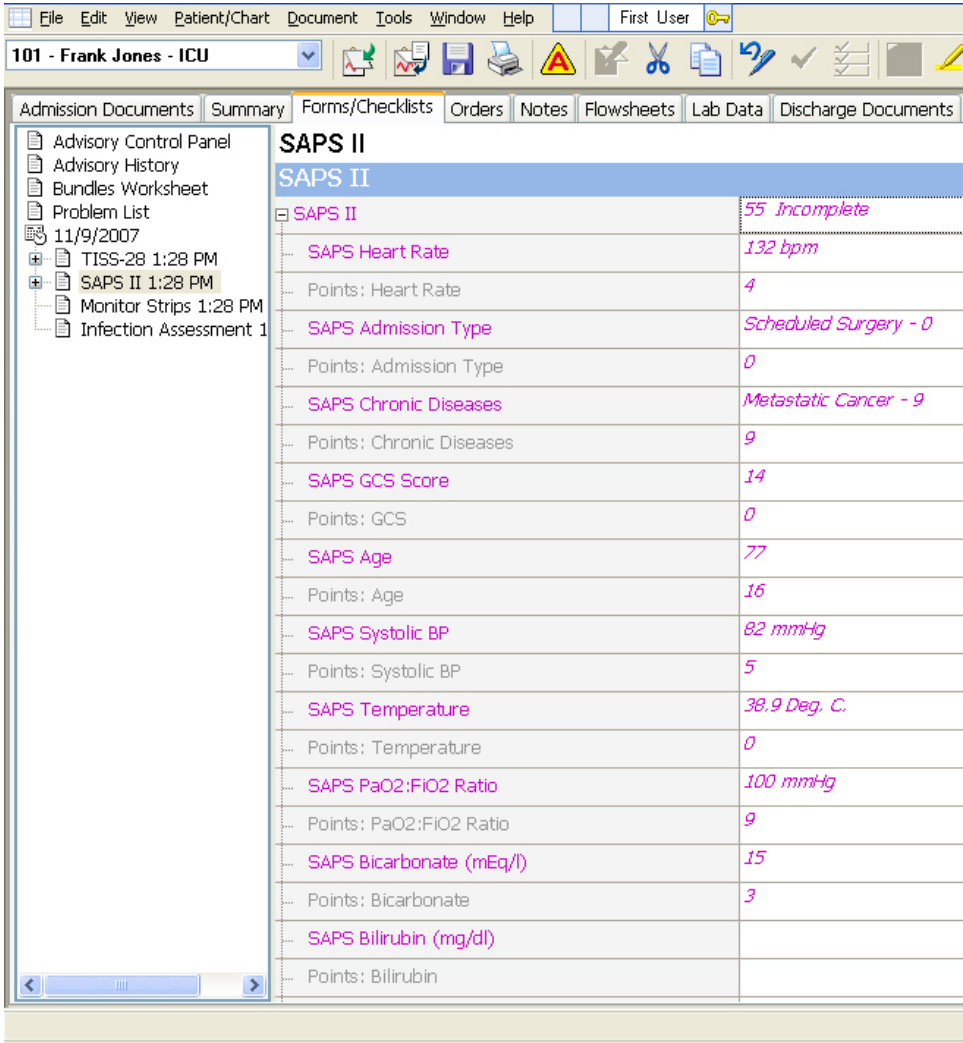
ICIP Critical Care provides scores such as SAPS II, TISS 28, Norton, Braden and the Glasgow Coma Scale

Automatic Calculation

These scores are calculated automatically from parameters in the routine documentation. By adding a document default values from other locations are coming across.

Additional Scores

Additional Scores could be build easily.



PHILIPS

Order Management

Simplifying Workflow

Order Management

Facilitates orders for infusions, IV drips, and medications, as well as interventions, including diagnostic exams, physiotherapy, and nursing activities.

Dose Calculations

Dose calculations based on Body Surface Area (BSA) or weight are especially useful in neonatology and pediatric units.

Work List

Provides clinicians with a patient-by-patient task schedule. It shows orders, including medications and therapies, to be administered over the coming 12 hours.

Order Sets

Customizable order sets help to standardize care. During order entry, ICIP Critical Care displays a list of existing orders and guides the physician through mandatory fields.
