TABLE # 18 - SAINT ELIZABETH HEALTH CARE

Through an innovative partnership between a large homecare and LTC organization, evidence-based PCC education material was developed with input from providers and clients. The interactive education sessions were first offered to PSWs and an implementation toolkit was developed to assist other organizations. We have now developed a PCC education program for the full range of front-line providers, support staff and management in LTC homes and the community care sector. In this presentation, we will share implementation strategies, lessons learned, and outcomes from this initiative, as well as ongoing strategies to create and sustain a culture shift toward PCC.
