

PREDICTION OF VISION FROM INVISIBLE STIMULI

Bradley N. Jack

Discipline of Psychology, School of Health and Human
Sciences, Southern Cross University, Coffs Harbour,
Australia

WHAT IS VISUAL MISMATCH NEGATIVITY?

A. Oddball sequence

Stimulus duration: 100 ms; Stimulus onset asynchrony: 500 ms

Background Experiment Results & Discussion

Data from Kimura et al. (2009, 2010); Figure from Kimura (2012).

WHAT IS VISUAL MISMATCH NEGATIVITY?

A. Oddball sequence

C. ERPs and difference waves (electrode: PO8)

Stimulus duration: 100 ms; Stimulus onset asynchrony: 500 ms

Background Experiment Results & Discussion

Data from Kimura et al. (2009, 2010); Figure from Kimura (2012).

WHAT IS VISUAL MISMATCH NEGATIVITY?

A. Oddball sequence

C. ERPs and difference waves (electrode: PO8)

Stimulus duration: 100 ms; Stimulus onset asynchrony: 500 ms

Background Experiment Results & Discussion

Data from Kimura et al. (2009, 2010); Figure from Kimura (2012).

WHAT IS VISUAL MISMATCH NEGATIVITY?

A. Oddball sequence

Stimulus duration: 100 ms; Stimulus onset asynchrony: 500 ms

C. ERPs and difference waves (electrode: PO8)

Background Experiment Results & Discussion

Data from Kimura et al. (2009, 2010); Figure from Kimura (2012).

WHAT IS VISUAL MISMATCH NEGATIVITY?

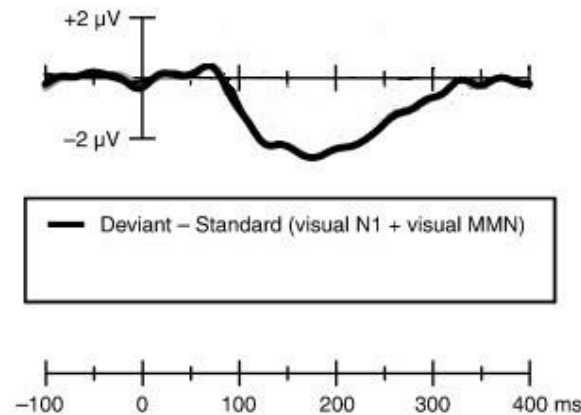

A. Oddball sequence

C. ERPs and difference waves (electrode: PO8)

Stimulus duration: 100 ms; Stimulus onset asynchrony: 500 ms

Background Experiment Results & Discussion

Data from Kimura et al. (2009, 2010); Figure from Kimura (2012).

WHAT IS VISUAL MISMATCH NEGATIVITY?

A. Oddball sequence

B. Equiprobable sequence

Stimulus duration: 100 ms; Stimulus onset asynchrony: 500 ms

C. ERPs and difference waves (electrode: PO8)

-100 0 100 200 300 400 ms

Background Experiment Results & Discussion

WHAT IS VISUAL MISMATCH NEGATIVITY?

A. Oddball sequence

B. Equiprobable sequence

Stimulus duration: 100 ms; Stimulus onset asynchrony: 500 ms

C. ERPs and difference waves (electrode: PO8)

Background Experiment Results & Discussion

Data from Kimura et al. (2009, 2010); Figure from Kimura (2012).

WHAT IS VISUAL MISMATCH NEGATIVITY?

A. Oddball sequence

B. Equiprobable sequence

Stimulus duration: 100 ms; Stimulus onset asynchrony: 500 ms

C. ERPs and difference waves (electrode: PO8)

Visual N1

Background Experiment Results & Discussion

WHAT IS VISUAL MISMATCH NEGATIVITY?

A. Oddball sequence

B. Equiprobable sequence

Stimulus duration: 100 ms; Stimulus onset asynchrony: 500 ms

C. ERPs and difference waves (electrode: PO8)

Background Experiment Results & Discussion

WHAT IS VISUAL MISMATCH NEGATIVITY?

A. Oddball sequence

B. Equiprobable sequence

Stimulus duration: 100 ms; Stimulus onset asynchrony: 500 ms

D. Neural generators

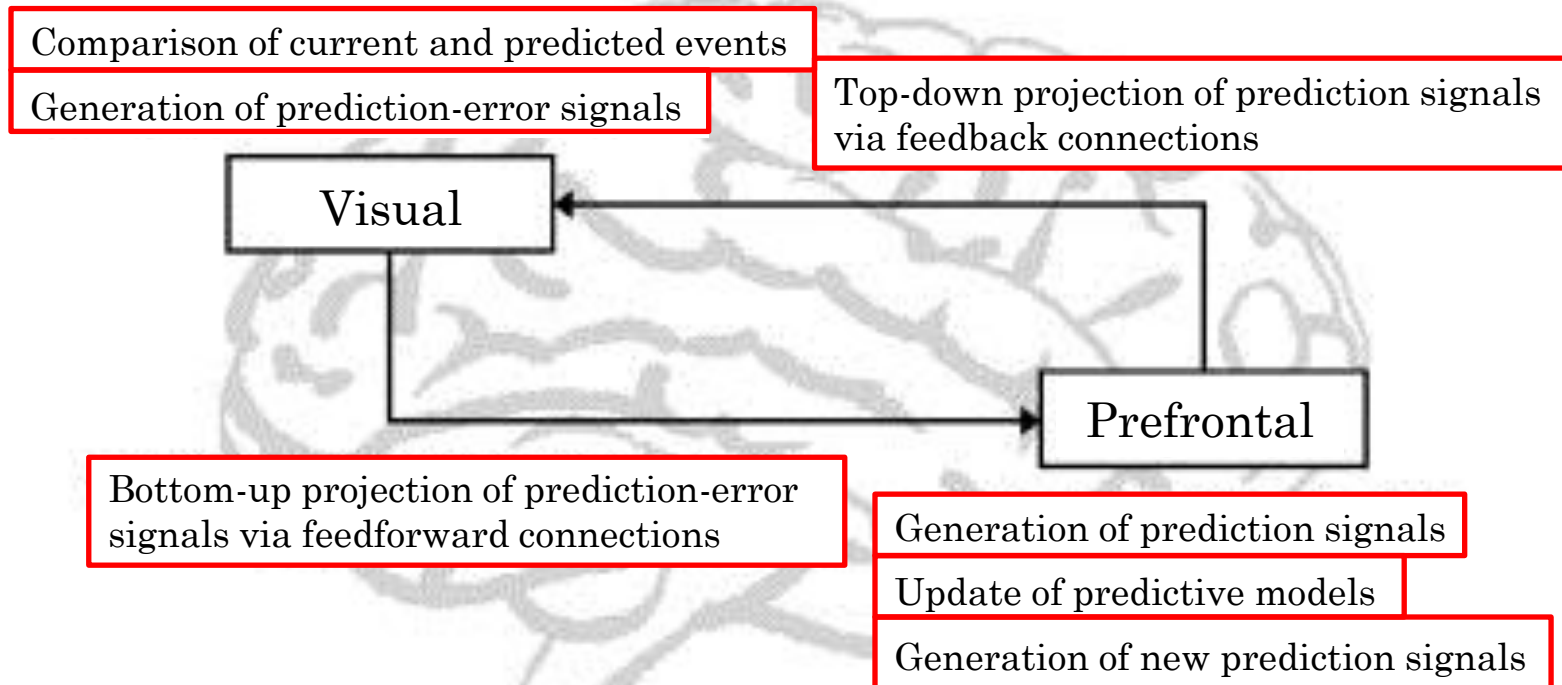

C. ERPs and difference waves (electrode: PO8)

EXPERIMENT 1: BINOCULAR RIVALRY

Oddball Sequence

Deviant Percept

EXPERIMENT 1: PARTICIPANT'S TASK

- Binocular rivalry tracking task
 - Press and hold left key for horizontal
 - Press and hold right key for vertical
- Attend to fixation

EXPERIMENT 1:

DIFFERENCE WAVES (DEVIANT-MINUS-STANDARD)

EXPERIMENT 1:

GENERAL DISCUSSION

- Predictions of visual input can be violated in the absence of visual consciousness.
- With attention, visual consciousness increases our processing of predictability of visual inputs.
- Can predictions be established in the absence of visual consciousness?

EXPERIMENT 2: INATTENTION AND CONSCIOUSNESS

	Conscious	Not-conscious
Attention	Attention with Consciousness	Attention without Consciousness
Inattention	Consciousness without Attention	No attention, No consciousness

EXPERIMENT 2: PARTICIPANT'S TASK

- Target-detection task
 - Press left key for “X”
 - Press right key for “O”
- Target at fixation

EXPERIMENT 2: POST-TEST SEQUENCE

Invisible Blocks

Visible Blocks

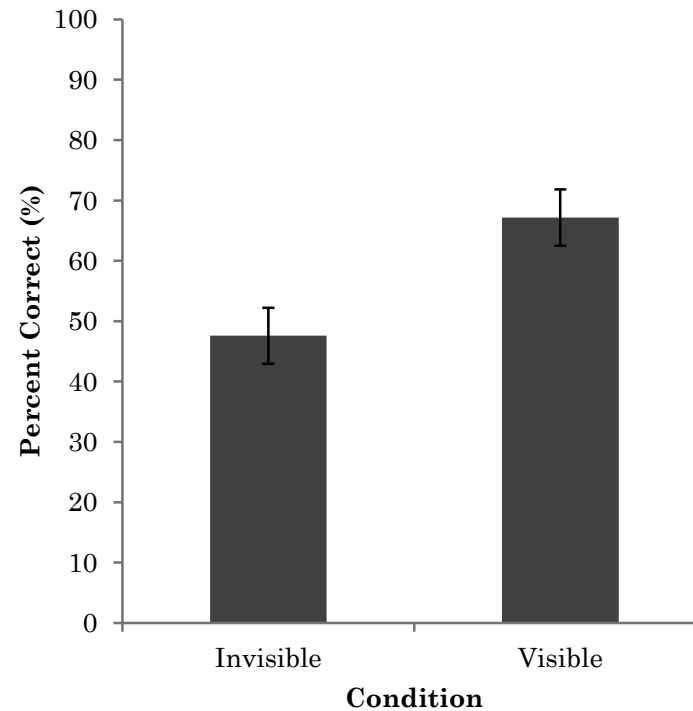

EXPERIMENT 2: POST-TEST ORIENTATION TASK

Background Experiment Results & Discussion

EXPERIMENT 2: POST-TEST ORIENTATION TASK

EXPERIMENT 2:

DIFFERENCE WAVES (DEVIANT-MINUS-CONTROL)

EXPERIMENT 2:

GENERAL DISCUSSION

- So, can predictions be established in the absence of visual consciousness?
- **Yes!**
- Without attention, visual consciousness slows our processing of predictability of visual inputs.

TAKE-HOME MESSAGES

1. Predictions of visual input are established, tested, and updated in the absence of attention and visual consciousness.
2. Not-conscious processing of visual input is not simply a weaker version of conscious processing of visual input.

TAKE-HOME MESSAGES

1. Predictions of visual input are established, tested, and updated in the absence of attention and visual consciousness.
2. With attention, visual consciousness increases our processing of predictability of visual inputs.
3. Without attention, visual consciousness slows our processing of predictability of visual inputs.

TAKE-HOME MESSAGES

4. Not-conscious processing of visual input is not simply a weaker version of conscious processing of visual input.
5. Top-Down Attention \neq Consciousness.
