**\$ PER GB**

3.5-inch standard form factor  
Global IT green initiatives  
Growing capacity  
OPEX  
Lower cost systems  
People costs  
Energy costs  
Reliability  
SSD  
Read/Write endurance  
IT system performance demands  
Dollars per IOPS  
Single port  
Moving parts  
Peak periods  
Consolidation  
High RPM HDDs  
No write cache  
Reduced floor space  
Fewer Servers  
2.5-inch standard form factor  
End-to-end data protection  
Cloud computing  
SAS  
Enterprise Flash Drives  
Performance flexibility  
Capital investment  
Enterprise computing environments  
Dual port

# The Efficient Storage Solutions Dilemma

- Demand for more capacity accelerating
- User want faster access to more storage
- Walls don't move easily and there is no more power
- Datacenters need better GB/cubic ft., IO/cubic ft., and GB/watt
- SSDs are an ideal solution except for the fundamental storage metric – they cost more \$/GB!

# New Approach: Improved Efficiencies

## HDD Attributes

- » Higher RPM (10K/15K)
- » Short stroke HDDs
- » Smaller FF drives
- » Over provision HDDs
- » Lower capacity HDDs
- » Striped data for MB/s

## Hybrid Approach

- » Storage tiers  
‘Hot’ data on SSDs
- » High capacity HDDs
- » Few devices for reliability
- » Dual port for performance
- » DO MORE FOR LESS!

# Example: Typical Enterprise Application

## Order Entry System\*

Transactions including entering and delivering orders, recording payments, checking the status of orders, and monitoring the level of stock at the warehouses.

## Requirements

- » 640,000 transactions/minute
- » 320,000 IOPS
- » 18 TB database

\* Case study from TPC-C Benchmark

## Current HDD Solution: High Cost / High TCO/ Low Efficiency

- » >\$450K purchase price
- » 450 usable GB GG1  
(7 GB/cu ft.)
- » 320K I/Os  
(4.6K I/Os/cu ft.)
- » 16,000 watts  
(0.03 GB/watt)

## Slide 6

---

**GG1**

450 usable GB?  
per shelf attributes?

16,000 watts (vs 1600)  
Greg Goelz, 3/30/2010

# Simple Proposition: More For Lower Cost (\$)

## HDD Solution

- » >\$450K purchase price
- » 450 usable GB  
(7 GB/cu ft.)
- » 320K I/Os  
(4.6K I/Os/cu ft.)
- » 16,000 watts  
(0.03 GB/watt)

## EFD+HDD Solution

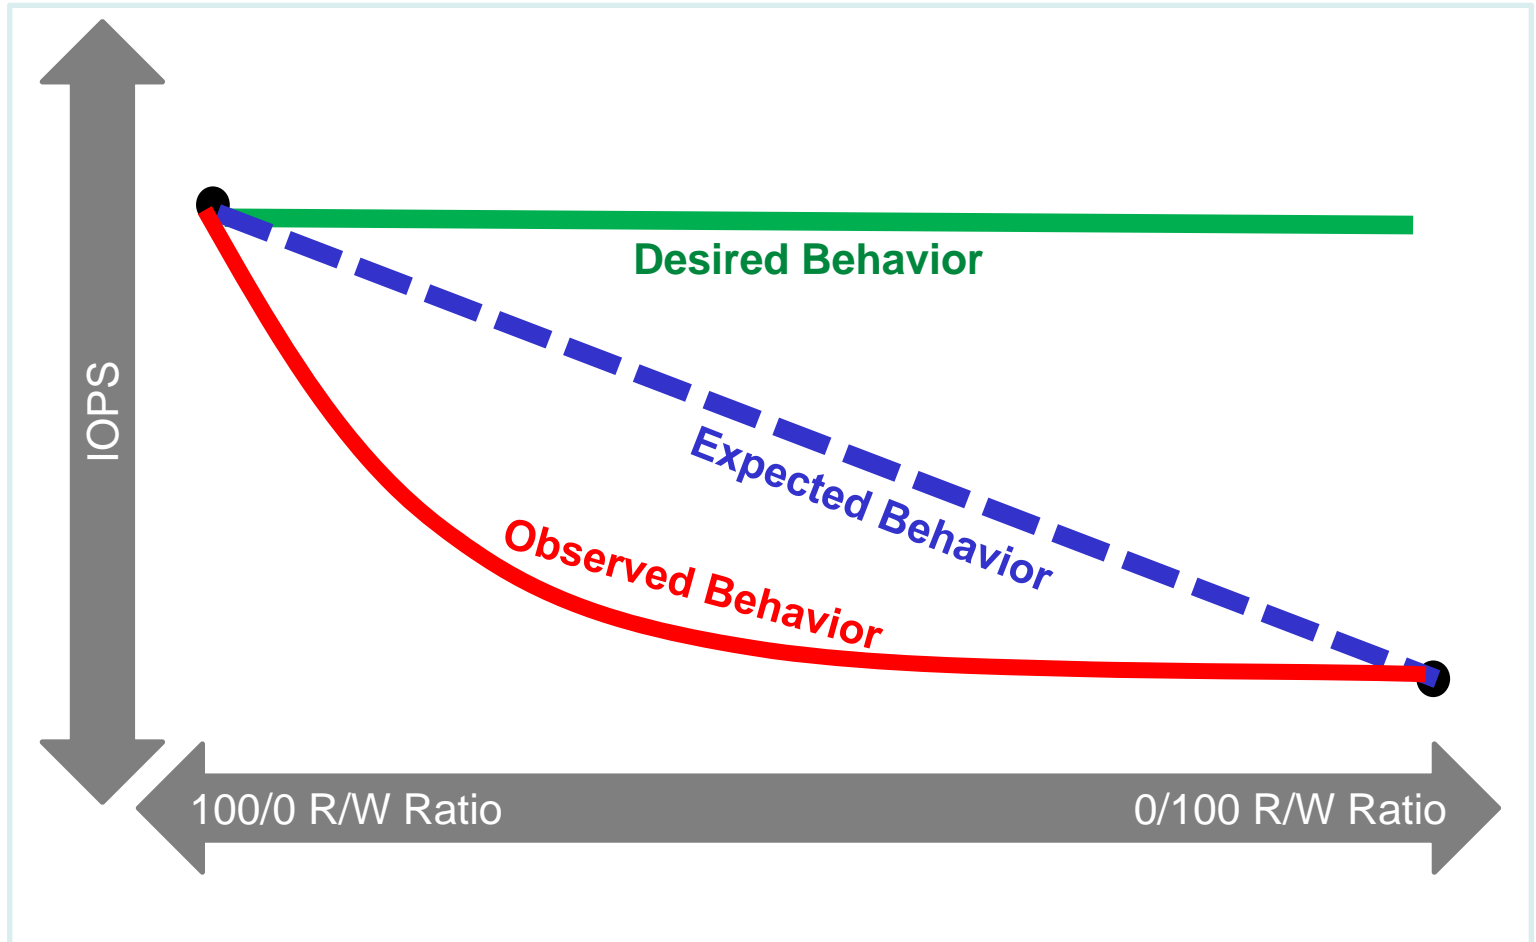

- » <\$225K purchase price
- » 3500 usable GB  
(337 GB/cu ft.) >50x
- » 320K I/Os  
(30K I/O/cu ft.) >6x
- » 2,000 watts  
(\$1.75 GB/watt) >60x

# SAS = Reliability & Performance

Dual path for redundancy

- » Fully independent ports = concurrent writing & reading
- » 4X the link bandwidth, supports multi-initiators seamlessly

# Enterprise Flash Drives

Do **MORE**  
For Less

- More Performance = Lower Cost
  - Lower cost = \$\$\$, energy, space
  - Predictable across enterprise workloads
- More Reliability – Lower TCO
  - Both data and device improvements
- No Changes Required = Easy Adoption
  - Use existing systems and software

Thank You!
